DEC Memo: "161640. 10/24/2005 @ 12:30. Argueta # 02927 of I&A reported to me at 12:17 on 10/24 that at 17 State St & Pearl St in V-6453 he discovered approx 50 gallons of a green unknown liquid in the structure. He was there on a Custustomer complaint of a water leak, but the water in the customers property is clear water and not related to this incident. No sewer/waterway affected, no private property affected, non fire/smoke involved, no injuries and weather did not contribute. The source and cause are unknown at this time. The Vault is on the sidewalk. The spill is in the concrete structure. The sump was found unplugged and defective on arrival Environmental tag # 44231 was hung. Two samples for PCB and ID are being taken. Cleanup action will be taken when Lab results are gotten. Account # H 3282. Logger R Pagano # 48703 10/24 @ 12:50. Chain of Cuistody # EE 08634. A Test for Ethly glycol will also be taken for antifreeze detection. Logger R Pagano # 48703 10/24 @ 17:00. update. Cig was notified at approx 12:30 with the information of this spill and will not be reportable until Lab results have come back from the Chem Lab. R Pagano 47803 4/05 21:15. Lab Sequence Number: 05-11193-001. no oil extracted from sample for analysis. 10/25/05 01:00. Lab Sequence Number: 05-11192-001. Aroclor 1260 < 1.0 ppm EPA 608/8082 10/27 @ 18:27. Argueta # 02927 of I&A reported to me that the cleanup was completed as of 12/25/2005 @ 12:00. No solids were removed al liquids up just pumped out due to Lab results findings. Environmental tag # 44231 was removed. No visible sign of the spill. Crew....Conway # 14691....Hunter # 87321. Logger RPagano # 48703 11/14/05 06:56 Received lab results, Lab Sequence Number: 05-11193-001 no oil extracted from sample for analysis. Lab Sequence Number: 05-11193-002 Antifreeze Contamination. Antifreeze Contamination Present "

DEC Memo: "12/27/19-Hiralkumar Patel. 12:27 PM:- OER Shaminder forwarded data from GZA including boring log and figures summarizing soil and groundwater results at location GZA SB-01. - PID reading of 341 ppm was recorded at 2 ft bg with petroleum-like odor (no sample was collected at this depth even with highest PID reading) - petroleum-like odor and PID readings of up to 141 ppm were recorded at 13 to 15 ft bgs - groundwater was noted at 13 ft bg - a soil sample from 13-15 ft bg (below water table) was analyzed - groundwater sample was analyzed - no sheen was observed - some VOCs were detected in soil sample - contamination noted in groundwater sample groundwater analyticals: ----------GZA-TW-1
Benzene----------100
Toluene----------320
Ethylbenzene----------320
Xylene----------2,300
1,2,4-Trimethylbenzene----------600
1,3,5-Trimethylbenzene----------140 2:24 PM:- sent email to OER Shaminder. based on review of boring log and sample result summary map, suggested him to report a spill at the site. 12/30/19-Hiralkumar Patel. subject spill was reported by GZA based on findings in boring GZA-SB-1. as per the log, this boring was installed on 07/30/19, but spill was not reported until today. alternate address: 11-13 Hubert St, 8 Collister St no PBS or other spills found. as per NYC DOB record, site has 'e' designation for 'hazmat' a DOB application was disapproved on 12/12/19 for building of a new five (5) story building. RJP NY Property Holdco LLC. **property owner** c/o Bernston Porter & Co. 11100 NE 8th Street, #400 Bellevue, WA 98004 Attn.: Joseph Abadi Ph. (917) 733-4800 email: joe.abadi@rjpc.com downloaded remedial investigation report from OER EPIC database. RIR includes Phase I also. summary of RIR dated May 2014: - site was historically developed prior to 1894 as a 6-story tin can manufacturing facility. the site was then developed between 1905 and 1928 with a one story

LOT 12,TAXBLOCK 214 (Continued) **S110670127**

warehouse. this structure existed until 1996 and also later served as a motor freight station and a private garage. the site was renovated between 1996 and 2005 with a 3-story mixed use commercial office and warehouse - in 2014, the site was used for commercial office space and residential purposes and contained a 3-story building with a basement and a one car garage at grade level at the northwest corner - elevation of the property ranges from 16.4 to 19.31 ft - result of GPR survey did not identify any anomalies at the site - depth to groundwater ranges from 5.43 ft below basement slab to 8.68 ft below basement slab ---------- - groundwater flow is generally from east to west ---------- - stratigraphy of the site, from the surface down, consists of a concrete slab followed by 8 ft of fine to medium coarse sand with traces of urban fill - installed five (5) soil borings (SP-1 through SP-5) and collected 10 soil samples - borings SP-1 through SP-4 were installed through basemen slab to a depth of 8 ft below basement slab - boring SP-5 was installed in northwest corner (in car garage) to a depth of 12 ft bg - based on boring depth details, basement slab is about 10 ft bg - installed three (3) 1-inch dia. monitoring wells through basement slab and collected three groundwater samples - wells were installed to a depth of 13 ft below basement slab with 10 ft of screen - installed three (3) soil vapor probes and collected three soil-vapor samples - no contamination noted in soil and groundwater samples, but petroleum/chlorinated solvent contamination was noted in soil-vapor samples soil-vapor analyticals (ug/m3):

----------SV-1--------SV-2--------SV-3
Toluene----------13----------61----------84
Ethylbenzene----------29----------37
Xylene----------42---------217---------258
1,2,4-Trimethylbenzene------38---------144---------109
1,3,5-Trimethylbenzene----------34----------31
PCE----------309----------12---------882
TCE----------23----------73 2:40 PM:- sent email to OER Alysha. informed her that results of Remedial Investigation conducted in May-2014 indicate presence of chlorinated solvent contamination in soil-vapor phase beneath the building slab, and recent investigation by GZA shows presence of petroleum contamination in shallow soil (high PID readings with petroleum odors around 2 ft bg) and groundwater in site s northwest corner. based on these, further investigation of soil, groundwater and soil-vapor contamination is needed including indoor/outdoor air samples, and site-specific groundwater flow direction using permanent monitoring wells. asked Alysha to submit an investigation work plan for review. email copied to OER Shaminder and Meredith (GZA). 01/06/20-Hiralkumar Patel. 3:08 PM:- received call from Meredith from GZA. she mentioned proposed site redevelopment includes excavation of soil in entire site to water table (may be little deeper in some areas which will remove all contaminated soil), dewatering (which will remove impacted groundwater), and new building slab at/near water table with vapor barrier beneath/around new foundation (no soil-vapor impact in future). RAWP will be submitted within 4-6 weeks and site excavation may begin by summer of 2020. as such Meredith proposes not to conduct any additional soil/groundwater/soil-vapor investigation. she also mentioned that property owner plans to apply for NYC VCP. asked her to submit documents to the Department for review/approval until the site accepted in city (or state) cleanup program (VCP/BCP).
01/31/20-Hiralkumar Patel. 10:12 AM:- received email from OER Alysha

LOT 12,TAXBLOCK 214 (Continued) **S110670127**

including summary of proposed RAWP. downloaded RAWP from OER EPIC database. summary; - proposed use of the site will consist of a new five-story, single-family townhouse with a full basement - proposed development will involve the demolition of the existing building including foundations - excavation will occur to below the water table - 3,372 sq. ft. (approx.. 74% of the property) will be excavated to a depth of approx. 14 ft bg - 1,207 sq. ft. of building area will be excavated to the depth of 16 ft bg - 88 sq. ft. of area of the building area will be excavated to the depth of 18 ft bg for elevator pits - petroleum impacted material is expected to be present from 12 to 16 ft bg underneath the existing garage - product sample, if encountered, will be collected for anlaysis - dewatering will occur - endpoint samples will be collected - if unrestricted use SCOs are not achieved, then a vapor barrier will be installed beneath the building slab (46 mil) and outside the sub-grade foundation sidewalls (31 mil) remedial action report will be submitted within 22 weeks from beginning of remedial action. 2:21 PM:- sent email to Alysha. informed her that the RAWP looks good and asked her to submit copy of approval letter. email copied to OER Shaminder. 01/26/21-Hiralkumar Patel. 9:30 AM:- sent email to OER Alysha inquiring updates. email copied to OER Shaminder. 9:36 AM:- received email from OER Alysha stating that a Notice to Proceed was issued in July 2020, but remedial work has not begun. **RAR after Dec. 2020.**"

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:
ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

DEC Memo:	"DEC INSPECTOR NOTES 5-27-99 E-Mailed Ed Radtke for information. 5/28/99: E-mail from Paula Jones - Spill source identified as raw sewage backup into vault from drain. No leaking equipment - transformer pressure tested OK. Tanker and flush truck used to clean out vault. ~~~~~~~~~~~~~~~~~~~~~~~~~ CON ED E2MIS 125105: 15 gals. of an unknown fluid on top of 285 gallons of water in V-6123(18M26). Installed sign #18284, took samples, contained. Sump not verified, sewer connection not verified. LAB ANALYSIS 99-05451 Arolcor 126 1ppm Initial assessment from operating surpervisor Luis roman indicated it was raw sewerage backing up into our vault. Cleanu structure was completed at 1845 hrs. Liquid was removed by tanker truck and the solid waste removed by flush truck. Transformer was pressure tested and held pressure."
Remarks:	"A BROWN BLACK COLORED FLUID WAS FOUND TO BE ON 285 GALS OF WATER CONTAINED IN MANHOLE. SAMPLES WERE TAKEN AND CLEAN UP PENDING LAB RESULTS CON ED 125-105"

DEC Memo: "8/18/05 - Raphael Ketani. Spoke to Bob Osa by phone on 8/18 at 3:15PM. He told me they were testing a generator and were transfering fuel from one tank to another when the overflow occuured due to the failure of the high fuel level alarm to sound. The fuel spilled out of an overflow pipe that is vented to the outside and ran down Stone

COMMERCIAL BUILDING (Continued) **S107410359**

Street to the intersection of Stone and Broad Streets. This happened between 6 and 6:30PM on 8/17. The NYFD closed the street and his workers placed sand bags along the street in order to catch the escaping oil. The NYC Hazmat was called and showed up and that the spill was not a major problem and told Mr. Osa and his staff to clean up the spill at 7 to 8PM. Mr. Osa's crew gathered up the dirty sand and containerized it. Their consultant, Emteque, came on site and is doing a post cleanup inspection inside the tank room and outside on the street. Dennis Huacan of DEP filed a spill notice E29104 and told Mr. Osa that the spill is not serious. The spill did not enter the sewers or drains. Mr. Osa told me that 3 to 5 gals. ran down the outside of the pipe and back into the basement and settled there. However, there are no drains or exposed soil in the basement - basement is sealed. This spill was also cleaned up. The MTA also occupies the same building. "

Remarks: "WENT OUT OF VENT, INTO STREET, AND INTO A YARD. DEP AND FIRE DEPARTMENT WAS ON SCENE. WAS ALL CLEANED UP."

DEC Memo: "08.18.05-Sharif// Sharif spoke with Jeff Amstrong(917-337-3286)of NYC OEM and he transferred the phone to Chief Engineer of the Building Chris Lascarides(646-252-3023). About 200 gallons of #2 oil

33RD FLOOR VAULT #V3753 (Continued) **S104508470**

spilled due to tank overfilling while tank for generator fuel supply pumping fuel from one tank to another. Spill impacted floor inside the building, side walk of the street and part of it went into storm sewer. FDNY and NYC Sanitation put sand down to absorb the oil. Building management will send DEC waste disposal manifest after the oil soaked sand and debri being cleaned up. 8/23/05 - Raphael Ketani. A duplicate spill case was closed on 8/18/05. Therefore, this case was also closed. 8/25/05 - Raphael Ketani. John Raguso of MTEK called today at 10:44AM and told me that the cause of the spill was the turning on of an automatic pump. He said that MTEK has taken care of the problem through software modification and other equipment changes. He added that he will send a report to DEC shortly describing all of the changes to prevent future spills. "

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo: "3/29/2013 - Austin - While water was being pumped out at 20 West St, we have no evidence that the 80 gals. of product found in the vaults outside that address came from that building, only water - Oil that impacted entire area came from numerous buildings impacted by the hurricane - Con Ed contained and cleaned up the spill - See eDocs files for further information - Sandy storm related - Spill closed - end"
Remarks: "Fuel oil from a third party was discovered in the 4 vaults. 20 gal in each vault. There is also oil outside the vaults on the sidewa and cars. According to reports 2 fuel tanks ruptured from a nea building. **Update** The oil spill is caused by a contractor who is onsite and currently pumping out the building basement that has water and oil in it."

G02 - Tank Secondary Containment - Vault (w/access)
I05 - Overfill - Vent Whistle

Tank Location:	Aboveground - contact with impervious barrier... Tank bottom rests on impervious barrier, allowing visual indication of leaks.
Tank Type:	Steel/Carbon Steel/Iron
Tank Status:	In Service
Pipe Model:	Not reported
Install Date:	01/01/2007
Capacity Gallons:	10000
Tightness Test Method:	NN
Date Test:	Not reported
Next Test Date:	Not reported
Date Tank Closed:	Not reported
Register:	True
Modified By:	msbaptis
Last Modified:	04/14/2017
Material Name:	#2 fuel oil (on-site consumption)

Environmental Interest/Information System:

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.
AIR MINOR
ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was DEMEO 10/20/03 TJD Verizon (tank owner) directed to investigate sub-surface imapacts from spill. Installed a single well in sidewalk adjacent to bakery. Analytical results revealed some low level exceedances to ground water quality standards. Subsequent sampling has revealed a downward trend in concentrations of compounds exceeding standards. RP has attributed contamination to historical fill and other spills in immediate vicinity. Based upon verizons investigation and direction of DEC Remediation Supervisor (Je Rommel) spill is closed. "

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Tank Info:

Tank Number: 001
Tank Id: 1363
Material Code: 0008
Common Name of Substance: Diesel

Equipment Records:

L00 - Piping Leak Detection - None
D02 - Pipe Type - Galvanized Steel
E02 - Piping Secondary Containment - Vault (with Access)
F00 - Pipe External Protection - None
J02 - Dispenser - Suction Dispenser
A00 - Tank Internal Protection - None
B01 - Tank External Protection - Painted/Asphalt Coating
K00 - Spill Prevention - None
C01 - Pipe Location - Aboveground
I04 - Overfill - Product Level Gauge (A/G)
G02 - Tank Secondary Containment - Vault (w/access)
H05 - Tank Leak Detection - In-Tank System (ATG)

Tank Location: Aboveground in subterranean vault with access for inspections.....
Tank in subterranean vault but accessible for inspection.
Tank Type: Galvanized Steel Alloy
Tank Status: In Service
Pipe Model: Not reported
Install Date: 10/01/1985
Capacity Gallons: 6000

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was FOLEY Con Ed e2mis #146295: On 12/8/02 at 07:58 J. Raparelli # 43462 of Central Field Services in Astoria reports that while putting up lights on a Christmas tree at F/O 25 Broadway he noticed that the hose to the hydraulic outriggers ruptured & spilled 2 gallons of fluid onto the asphalt.This was on vehicle-60500 a bucket truck. The spill was contained with pigs, diapers, & a bucket was put under the broken hose to catch the fluid that further leaks out. He also has called his office to have transportatin come to make repairs. They will finish the cleanup & call back once transportation has corrected the problem. No sewers or waterways were affected. No smoke or fire was involved. No injuries were related to the spill. No private property was affected. Weather conditions do not contribute to the hazard of the spill. Trasportation arived on the scene at 08:40 & removed the broken hose they went back to 16 St. to get a new one & they had no material on the truck to assist on the cleanup. E. Fermaint Flush forman will bring additional material to the job to finish the cleanup. "
Remarks:	"faulty hose caused material to be deposited onto blacktop cleanup in

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was ROMMEL CALLED MR. SILVERI, 60T AN ANSWERING MACHINE- LEFT EXT. 7130, KERRI O'DOWD AND SAID YOU WOULD BE IN MONDAY. 7/21/2000 CASE IS REASSIGNED TO SANGESLAND REP FROM AKRF (ENVIRONMENTAL CONTRACTOR) CALLED TO DISCUSS THE CASE. BASICALLY THE SITE WAS AN AUTO REPAIR SHOP WITH BURIED TANKS. TANKS WERE PULLED ALONG WITH 4,600 TONS OF CONTAMINATED SOIL. PRIOR TO TANK PULL, 3 WELLS WERE INSTALLED SHOWING HIGH CONTAMINATION. IN DEC '99 A SECOND ROUND OF WELL SAMPLES SHOWED LOW READINGS EXCEPT FOR MTBE = 3,700PPM. SANGESLAND SUGGESTED THAT THE MTBE LEVELS WERE HIGH AND SOME FORM OF ADDITIONAL REMEDIATION WOULD BE REQUIRED. 2/28/2001 Andrew Rudko V.P. at AKRF (212-696-0670) submitted a 3 page report which gives results of the 2/13/2001 round of sampling. There is a question about MW #3. In July 2000 a layer of thick, black, very viscous floating petroleum product was discovered in the well AKRF believes this was dumped, because it doesn't track with the mild contamination levels recorded in earlier sampling. AKRF cleaned MW #3 on Feb 7, 2001 with detergent and brushes, then vacced out 10 gallons from the well. On Feb 13, 2001 AKRF sampled all 3 wells and MW#3 did not have any product. Unfortunately MW#2 now had heavy black oil in it. AKRF did a fingerprint analysis and found it to be used motor oil. Contractors working at the site said ConEd arrived one evening during the period Feb 5-Feb 16, 2001 and cleaned out oil from one of their vaults at the intersection of Hudson Street and Ericsson Place (NYC). Sangesland will check with Con Ed Monitor. 1/29/2002 Sangesland spoke with Bruce Weinstein Camp Dresser McKey (800-934-0500 x225) Open up MW #2 & #3 Sample for VOC SVOC and MTBE (8021 & 8270) Start out at quarterly sampling to find trends. 6/19/2002 - Sangesland met with property owner rep and CDM reps. Information was reviewed which confirmed the owner's belief that the contamination issues specifically on the site had been removed prior to the construction of the new building. The residual contamination under the adjacent sidewalk which keeps appearing in the two monitoring wells will need to be addressed. David Keil of CDM asked

124 HUDSON ST (Continued) **S104649100**

how the original spill number could be closed out. Sangesland suggested several options: 1) Clean the site - when it meets standards - close it out 2) Conduct a sidewalk delineation (geoprobe). Confirm that there is contamination in the area and not just a case of dumping into the 2 wells. If contamination is found CDM should call in a new spill number and specifically refer to the location as public sidewalk in front of (I/F/O) 124 Hudson St . When the owner of 124 Hudson St signs a NYSDEC Stipulation Agreement for remediation of the new sidewalk spill number, then the DEC will make a final review of the On Property spill documentation and will then close out the old spill number. CDM said they will develop a cleanup plan. 7/30/2002 Sangesland received a call from an attorney (Mr. David Hersey-Webb 212-349-3000). He stated that he works for a potential purchaser and requested an update on the status of the closure request. Sangesland repeated the information listed above. 4/12/04-Vought-Spill transferred from Sangesland to Rommel as per Rommel. 11/29/04 Spoke to Michael Moris, ATC, 212-353-8280. Site previously managed by Sangesland. They injected biorem-type product. Subsequently, wells were inaccessible for sampling. Will review file. Rommel 12/2/04 Reviewed ATC's 10/13/04 Remedial Action Letter, which proposed NFA. 7/19/04 gw sample MW2 Benzene 7400ppb, Toluene 66000, Ethylbenzene 56000, Xylenes 48000ppb, MTBE ND. Previously occupied by auto repair facility, building on NE corner. 275 ust corner of Ericsson and Hudson, along Ericsson. Floating product previously found in MW3, MW-2 Spoke to Mark Morris ATC, He will provide lab reports for 7/19/04 sample from MW-2 Well construction logs Gauging Data Will re-develop well, possibly install deeper, maintain monthly. Numbers too high to close. 5 gallons of Bio injected in well, same well was sampled without purging to obtain gw samples. Rommel ATC accessed the three monitoring wells and the small diameter wells formerly used for bio injection. All but well 2 had floating product. ATC will return to perform high vapor extraction and evaluate product recharge. 5/2/05 - Called Mike Morris of ATC to discuss the latest report. Told him to continue the high vac extraction using vac truck at MW 2. Need to address disolve phase after product is gone for at least two sampling cycle. - KST 7/26/05 - Returned a call to Michael (ATC Assoc.) at (212) 353-8280 Ext. 345. They have been removing product from one well on a biweekly basis. I asked if there has been any additional data or reports generated since the October 13, 2004 report in the file and he said no. I told him I would review the file and advise him on the necessary next steps to advance the spill towards closure. Zalewski 8/3/05 - Called Mike Myers (ATC) and provided a summary of my review of the file. Needs additional work. I also requested an update on corrective action activities since the October 13, 2004 report. Zalewski 10/12/05 - Received a phone call from Mike Myers (ATC). We discussed the project and the steps necessary to advance this site towards closure. Includes additional investigation to delineate the extent of free product outside the limits of the excavation for the building footprint, evaluation/optimization of current remedial method (bailing) to recover free product, etc.). Zalewski 11/2/2005 - Met with Mike Morris (ATC) and Shawn Hardy (Archon Group) in Albany. Discussed status of spill. ATC to submit a corrective action plan for approval that includes additional off-site investigation and optimization of product recovery efforts. Zalewski 03/06/2006 - Transferring back to Region 2. Recommended next steps. Send a letter to Archon Group requesting a corrective action plan for additional off-site

124 HUDSON ST (Continued) **S104649100**

investigation and optimization of product recovery efforts.
(Zalewski) 7/10/06 - reviewed the lates report by ATC. No VOcs and SVOCs were found in all 3 new wells. Well MW-2A was installed right next to MW-2 where floating petroleum product (waste oil) was found before. No free or VOCs detected in MW-2A. Off-site wells (MW-4 and 5) were both non-detected for VOCs and SVOCs. Source removal via tanks removal and soil excavation was documented. The oil originally found in MW-2 appeared to be dumped there. GW monitoring and EFR began in May 2002 and continue to Nov. 2005, have cleaned up most of the floating oil in MW-2. Spill is closed. - KST Owner Contact: WXI/GDM 124 Hudson, LLC c/o Archon Group 600 E. Las Colinas Blvd. Suite 400 Irving, TX 75039 ATTN: SHAWN HARDY 972-368-2823 "

Remarks: "CALLER RESPONDED TO ABOVE LOCATION PROPERTY ASSESSMENT. UPON INVESTIGATION SOIL CONTAMINATION HAS BEEN DISCOVERED. SOIL SAMPLES HAVE BEEN TAKEN AND CALLER REQUESTING CALL BACK IN REFERENCE TO PROBLEM. "

FEEDER M51 (Continued) **S108982112**

Contact Name: ERTSDESK
DEC Memo: "1/16/08. Anthony Buda reports that the leak rate has been recalculated to one gallon per hour and the loss recalculated to 170 gallons. PFT trucks have a hit at Bway & LaSalle St. ConEd will be probing there. 209483. see eDocs 1/17/08. Anthony Delgado reports that a clamp eight feet long was required because of the worn condition of this feeder. 333 gallons are estimated to have leaked out. 1/17/08. Mike Pillig reports that the clamp on the pipe is leaking a bit, so ConEd put a pail underneath and has a vac truck on site to empty the pail periodically. The plan is to weld a barrel over the clamp w/o bothering to stop this drip. The barrel will go during second shift today. The clamp stopped the impact to the environment, which Mike puts at 180 gallons to the soil beneath the feeder. The hole is at the bottom. Fluid seems to have gone straight down. Mike will dig straight down in a 8 X 10 foot area with the hole of recovering it all. 1-23-08: George, Here are two pics and the updated EMIS report for the subject leak. We excavated to bedrock, sampled the sidewalls and are waiting for the results. Michael Pillig Transmission Operations, EHS (718) 204-4256 (347) 386-5506 1-24-08. Mike Pillig reports ConEd has excavated to bedrock and taken samples for analysis. He says this section of feeder has been cathodically protected via impressed current with rectifiers. Nevertheless, there seems to be holidays in the coverage based on the corrosion that was found when the section between 108 St and 123 St was inspected and refurbished. 1-24-08. George, Here are the sample results from the excavation at Broadway and Tiemann, (M51 leak). I think you will agree that our remediation efforts were sufficient to close the subject spill. Please review at your convenience and let me know what you think. Thanks for your help. Mike _____ From: Moawad, Joseph Sent: January 24, 2008 11:31 AM To: Pillig, Michael E.; EA - Chem Lab Reports; dl - MN - Lab Analysis Cc: dl - TRANSOPS EH&S; Paretsky, Leon Subject: Submitter: MICHAEL PILLIG LSN 08-00515 Incident # 209483 Page 1 of 8 1/24/2008 Consolidated Edison Environment, Health and Safety ChemLab NY Lab ID No: 10380 Lab Sequence Number: 08-00515-001 Date Approved: 1/24/2008 Incident Number: 209483 Date Received: 1/18/2008 Chain of Custody ID: FF30638 Date Sampled: 1/18/2008 Submitter: MICHAEL PILLIG Job Site: TIEMANN PL & BWAY Email To: PILLIGM@coned.com-EA-ChemLabReports-DL - MN - LAB ANALYSIS To: DL - TRANSOPS EH&S-PARETSKYL@coned.com- NOTE: The Submitter sh post and/or provide these results to all employees working with the vicinity of this substance. Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo:	"7/13/15 TJD File review. Spill reassigned from AH Primary (Ahmed) to AH Secondary (Demeo). 5/16/16 TJD File review. Closure report submitted by Petroleum Tank Cleaners. As per report, the 20K #6 FO UST failed a system test with a reported dry leak on 9/4/14. The tank and lines then were reported to be isolated and retested on 9/9/14 - the tank only test passed and lines failed. Petroleum tank cleaners replaced the lines reporting that, no contamination was found during the course of work . A system tank test was performed on 10/10/14 with passing results. All documentation has been uploaded to DECDOCS. No further action is required. Spill closed."
Remarks:	"20,000G UST failed tank test. Tank is empty at this time. In thr process of switching from #6 to #2 oil."

DEC Memo: "1/24/14: Mahat A spill was called in beacuse hose got disconnected during delivery. During the spill, # 4 fuel oil travelled to the construction site (ConEd Property). ConEd called in for a spill (Spill #1310253). The delivery company was ESF transportation and they are very responsive and willing to clean the spill. ESF hierd Riteway Cleaner to do initial cleanup. Allstate Clean Vac is cleaning the ConED property. Alex Zedlovich (ESF Transportation @ 347.865.2536) Eric (Hess @ 908.392.0136) Paul (ERT @ 212.580.8383)

100 HUDSON TENANTS CORP (Continued) **1001202956**

Mr. Ted Keffer (Action Environmental @ 908.788.7826) informed that ESF has retained him to clean the site. Mr. Keffer will keep DEC posted about the clean up process. Left a voice message to Mr. Keffer asking more information about the cleanup process. 1/31/14: Mahat Received a call from Mr. Keffer and he is working on clean up report. 2/12/14: Mahat Mr. Keffer sent a report including pictures and closure request. It is uploaded on edocs. The report has been reviewed and also consulted with supervisor prior making decision. Spill area and its vicinity are clean. There are few stains on the concrete trench and wall. It is because of the #4 fuel oil. The entire place will be back filled with fresh soil once the sewer work is completed by the CAC crew. As per report, the site is clean satisfactorily. No further investigation is required by the Department. Case is closed. DEC Require: 1. Clean up report 2. No contamination letter."

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Contact Name: CONTROL COMBUSTION- JERRY
DEC Memo: "02/16/08-Zhune responded to this spill. The return line froze and was leaking. Petroleum Tank Cleaners installed a temmporary return oil line. Part of the spill was contained in the man hole of the tank and part went to the wall by the suction and return line in the basement. Petroleum did the cleaned up. 05/01/08-Zhune spoke to jerry Williams from Control Combustion. He said soil boring samples need to be taken at this site. The proposal was sent to YL Management Karol Vergara (212)757-5353. They have not receive any respond yet. 05/23/08- Zhune had a phone conference with Karol Vergara a Torres. Jenni said we still have the temporary lines. Right now are working on Local law 11 as soon as they finish this job we will star digging out the lines. 10/21/08- Miller Environmental Group sent the Subsurface Investigation Report on 10/15/08. Miller Environmental Group was cantracted to conduct environmental investigation at 225 Rector Place, New York, NY. An underground storage tank (UST) equipment failure was observed on February 15, 2008. The tank system piping has been rerouted with temporary hose to the boiler system. the subject propety is used for residential dweelings. The site has one (1) 20.000 gallon number 6 oil UST installed to the north of the building and is currently active. On september 17,2008 MEG arrived on the sit and (4) soil borings were advanced in the vicinity of the 20,000 gsllon UST with a direct-push track mounted uni. The subsurface investigation procedures were fallowed in accordance with NYSDEC Spots Memo#14. No oil staining was observed, but a slight organic odor was present in soil borings B-1, B-2, B-3 and B-4. Each soil sample taken from the direct push macro core sampler was screened with a photo-ionization detector (PID)for volatile organics. For confirmatory purposes a one (1)inch diameter monitoring well wa advance to 20 feet below grade and a groundwater sample was taker Groundwater was encounter approximately at 12 feet below grade. The groundwater and soil samples were analyzed for volatile organic compounds (VOC's) and semivolatile organic compounds (SVOC's) using EPA Methods 8260 and 8270 (STARS List), respectevely. Results from the laboratory indicated that Benzo(a)anthracene, Benzo(a)Pyrene, Benzo(b)fluoranthene and Chrysene were detected in soil samples B-1(10-12'), B-2(10-12'), B-3(15'-17'), B-4915'-17') and they are above the NYSDEC (RSCOs). The groundwater sample taken from monitoring well(MW-1) indicated that Benzene (7.5PPB) and Naphthalene (10PPB) were present just above NYSDEC 4046 TAGM criteria. 10/22/08- Zhune spoke to Jerry Williams from Control Combustion. he sa another proposal was already approved to do the fallowing: All the impacted soil should be excavated in the area between Manway and the building wall apporximately 10ft. End point samples wiil be take and sent to the lab. there is some staining on the boiler room wall and floor that needs to be cleaned. The free floating oil that accumulated in the smalll vault needs to be vacuumed out and cleaned. Water has also filled into the manway and should be vacuumed (no product present. the grated manhole cover needs to be replaced with solid cover with seal so rain runoff does not accumulate in the small vault. 11/19/09- Zhune. Miller Environmental group sent a letter dated 11/18/09 discribing the remediation activities at this site. On November 5, 2008 a four (4) man crew with a vacuum truck and hotsy

APPT BUILDING (Continued) **S109059634**

(high pressure hot water washer) truck cleaned the oil impacted containment vault and manway. Four hundred (400) gallons of emulsified oily water was removed from the site. On the same day, the crew cut the pavement and excavated soil above the existing 20,000 gallon underground storage tank (UST) in order to expose the supply and return lines. A 10 x 5 foot pit was excavated with a guzzler truck. Five (5)yards of contaminated soil media was removed from above the tank. Once the unearthing of the system piping was complete, photo-ionization detector readings were taken of the excavation and UST ground lines and both were non-detect for volatile organics in the parts per million (ppm)range. Subsequently, other contractors repaired the UST piping and backfilled the open pit. Based on PID reading report that showed no contamination detected for volatile in the excavation and ground lines this spill is closed. "

Remarks: "oil line from burner let go; crew responding; spilled in basement; some in a pit and some on the floor"

DEC Memo: "4/19/16 TJD No petroleum discharge. Referred to DLE and NYCDEP. Spill closed. 4/19/2016: Rashad I spoke to the complainant and he did not inform any other agencies. He also indicated he first observed the discharge on April 15th and then again this morning. I received pictures from the complainant and forwarded them to DLE, DLE indicated they were interested, however they did not confirm that they would stop by. I also referred the case to DEP and will be supplying them with the photographs when they call me back (ref#186125446). Photographs will be uploaded to D2. "
Remarks: "To whom it may concern at NYS Department of Environmental Conservation, I would like to remain anonymous out of concern over reprisal, however, I will divulge my full identity to either a NYS DEC representative or NYC DEP representative verbally in giving

LEMAN MANHATTAN PREPARATORY SCHOOL (Continued) **S118637855**

testimony. My phone number is: 917-292-5989 I am a NY State employee of 7 years working in Downtown Manhattan. On my journey home from work on Friday evening, 4/15/2016, shortly after 5 pm, I walked past 1 Morris Street in Downtown Manhattan, 10004. I stood aghast as I and another New Yorker observed many gallons of antifreeze (glycol) pouring into the street gutter through black rubber hoses (pictured in the attached photos) rigged from the roof top of the building address (stated prior) to the curb via scaffolding. We quickly surmised in mutual disgust that the many gallons of neon green waste streaming into the storm drain must be the result of intentional commercial building unit AC coolant discharge - i.e. criminal dumping in violation of environmental regulations for handling and disposal industrial and commercial liquids. It was shocking. I felt like I had just witnessed an assault. Where was I? In some reprobate 3rd world country ruled by thugs and lawless underlords? No, this just happened in Downtown NYC executed at the hands of working facilities and maintenance people! Forget the protocol, just pump it to the street after business hours, and assume nobody sees it. And, even if they do see it, what recourse would they have without any concrete evidence.

Whom would they blame - no one around to ID? What if any real consequences would there be? Most likely less hassle than complying with the actual regulations. I recoiled immediately, but then clamored for my phone to try to document the scene. By that point the discharge from the line had stopped, but it was still flowing down hill toward the drain. The attached photos tell the tale by what was left of the evidence, dribbling anonymously into the sewer grate. I do hope somebody in authority over this situation will be held accountable for this injustice to every law abiding facilities maintenance contractor and decent lawful resident of NYC. The photos were taken directly outside of: Lman Manhattan Preparatory School 1 Morris St, New York, NY 10004 Phone:(212) 232-0266 It is unclear which occupant of the building has control and responsibility over the AC units. Please contact me if you require more detail, thank you. Sincerely, R. F. CFS #16-006292"

Environmental Interest/Information System:
AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.
AIR SYNTHETIC MINOR
FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Environmental Interest/Information System:
NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.
ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Tank Info:

Tank Number:	001
Tank Id:	3280
Material Code:	0001
Common Name of Substance:	#2 Fuel Oil (On-Site Consumption)

Equipment Records:

C01 - Pipe Location - Aboveground
I04 - Overfill - Product Level Gauge (A/G)
J02 - Dispenser - Suction Dispenser
F06 - Pipe External Protection - Wrapped
G00 - Tank Secondary Containment - None
D00 - Pipe Type - No Piping
L09 - Piping Leak Detection - Exempt Suction Piping
H00 - Tank Leak Detection - None
A00 - Tank Internal Protection - None
B05 - Tank External Protection - Jacketed

Tank Location:	Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.
Tank Type:	Steel/Carbon Steel/Iron
Tank Status:	In Service
Pipe Model:	Not reported
Install Date:	01/01/1987
Capacity Gallons:	5000
Tightness Test Method:	-
Date Test:	Not reported

Environmental Interest/Information System:

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when

PORT AUTHORITY OF NY&NJ - WORLD TRADE CENTER (Continued) **1016091032**

complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.
FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Federal CERCLIS list

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 02/22/2021

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

NJ SHWS: Known Contaminated Sites in New Jersey

The Known Contaminated Sites in New Jersey includes sites under the purview of the Site Remediation Program which have contamination present at levels greater than the applicable cleanup criteria for soil and/or groundwater standards. The sites appearing in Known Contaminated Sites in New Jersey are classified as either active, where the site is assigned to a specific remedial program area, or pending, where the site is awaiting assignment to a specific remedial program area. Sites where no further action (NFA) designation has been given are not included in this report unless there are other areas of identified contamination which have not been remediated. This report includes sites being remediated under all of the various regulatory programs administered by the Site Remediation Program such as: Federal Superfund Program, Federal Resource Conservation and Recovery Act (RCRA), New Jersey's Industrial Site Recovery Act (ISRA), New Jersey's Underground Storage of Hazardous Substances Act, New Jersey's Spill Compensation and Control Act, New Jersey's Solid Waste Management Act, New Jersey's Water Pollution Control Act.

State and tribal institutional control / engineering control registries

NY RES DECL: Restrictive Declarations Listing

A restrictive declaration is a covenant running with the land which binds the present and future owners of the property. As a condition of certain special permits, the City Planning Commission may require an applicant to sign and record a restrictive declaration that places specified conditions on the future use and development of the property. Certain restrictive declarations are indicated by a D on zoning maps.

NY VCP: Voluntary Cleanup Agreements
New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

NY ERP: Environmental Restoration Program Listing

In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a $200 million Environmental Restoration or Brownfields Fund as part of the $1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

NJ LIENS: Environmental LIENS

A listing of properties with environmental liens. The listing includes sites from the Site Remediation & Waste Management Program Sites where the Department has placed either a 1st Priority or Regular Spill Fund Lien against. 1st Priority Type Lien - a lien placed against the property where the discharged occurred providing that the owners of the property have some responsibility towards the discharge. First Priority Lien is superior to other types of liens. Non-Priority (Regular) Type Lien - a lien placed against the Responsible Party & their revenues and all real and personal property, other than the real property comprising the location of the discharge.

NY HIST SPILLS: SPILLS Database

This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and hazardous chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases, by anyone who has knowledge of the spills). In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY SPILLS database. Department of Environmental Conservation.

Other Ascertainable Records

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006
Date Data Arrived at EDR: 03/01/2007

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

NY E DESIGNATION: E DESIGNATION SITE LISTING
The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designations also include a mandatory construction-related health and safety plan which must be approved by NYCDEP.

NY HSWDS: Hazardous Substance Waste Disposal Site Inventory
The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

NY SPDES: State Pollutant Discharge Elimination System

New York State has a state program which has been approved by the United States Environmental Protection Agency for the control of wastewater and stormwater discharges in accordance with the Clean Water Act. Under New York State law the program is known as the State Pollutant Discharge Elimination System (SPDES) and is broader in scope than that required by the Clean Water Act in that it controls point source discharges to groundwaters as well as surface waters.

NYC LEAD 2: Recent Lead Paint Violations

Pursuant to New York City?s Housing Maintenance Code, the Department of Housing Preservation and Development (HPD) issues violations against conditions in rental dwelling units that have been verified to violate the New York City Housing Maintenance Code (HMC) or the New York State Multiple Dwelling Law (MDL). Violations are issued when an inspection verifies that a violation of the HMC or MDL exists. It is closed when the violation is corrected, as observed/verified by HPD or as certified by the landlord.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations
EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

NORTH BPC RESILIENCY
BATTERY PARK CITY
NEW YORK, NY 10007

TARGET PROPERTY COORDINATES

Latitude (North):	40.712621 - 40° 42' 45.44''
Longitude (West):	74.016294 - 74° 0' 58.66''
Universal Tranverse Mercator:	Zone 18
UTM X (Meters):	583092.3
UTM Y (Meters):	4507110.0
Elevation:	1 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	6048959 JERSEY CITY, NJ
Version Date:	2014
Southeast Map:	5940597 BROOKLYN, NY
Version Date:	2013

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

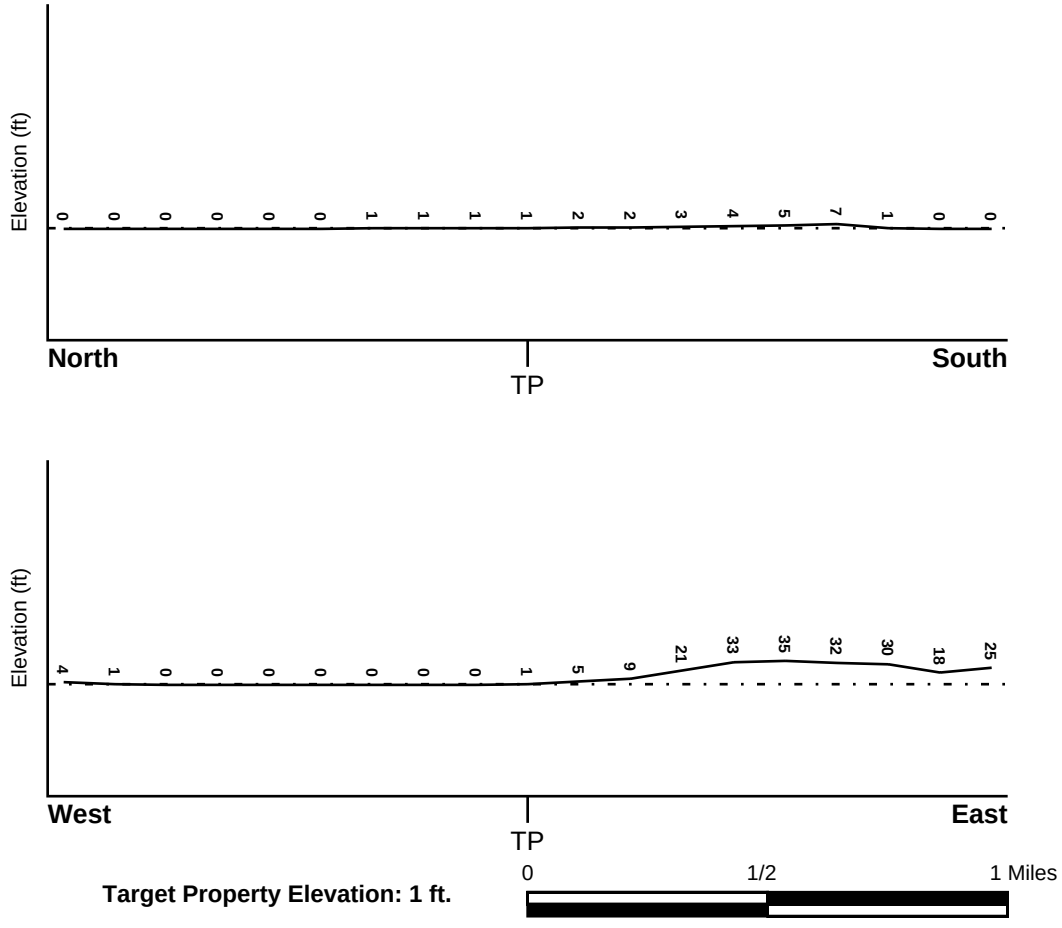
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General West

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
3604970184F	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type

3604970203F	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
JERSEY CITY	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
Not Reported		

* ©1996 Site−specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Paleozoic
System:	Ordovicias
Series:	Lower Ordovician and Cambrian carbonate rocks
Code:	OC *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Stratified Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

No detail available.

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Matrix New World Eng.,Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Contact: Stephanie Rosenberg

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Matrix New World Eng.,Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Matrix New World Eng.,Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Matrix New World Eng.,Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Certified Sanborn Results:

Contact: Stephanie Rosenberg

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Matrix New World Eng.,Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Certified Sanborn Results:

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Matrix New World Eng.,Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Matrix New World Eng.,Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Certified Sanborn Results:

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Matrix New World Eng.,Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Matrix New World Eng.,Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Certified Sanborn® Map Report

06/28/21

Site Name:

North BPC Resiliency
Battery Park City
New York, NY 10007
EDR Inquiry # 6552446.3

Client Name:

Matrix New World Eng.,Inc.
26 Columbia Tpke Fl2
Florham Park, NJ 07932
Contact: Stephanie Rosenberg

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Matrix New World Eng.,Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Certified Sanborn Results:

Certification # EAB2-47EF-8788

PO # 20-1152

Project North BPCA

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by Matrix New World Eng.,Inc. were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

FOIL REQUESTS

FOIL Request :: W085352-070121

New York DEC Support <newyorkdec@mycusthelp.net>

Thu 7/1/2021 6:30 PM

To: Patrick Yum <pyum@matrixneworld.com>

[EXTERNAL]

Dear Chi :

Thank you for your Freedom of Information Law (FOIL) request. Your request has been received and is being processed. Your request was received in this office on 7/1/2021 and given the reference number FOIL #W085352-070121 for tracking purposes. You may expect the Department's response to your request no later than **8/2/2021**.

Record Requested: **Matrix is preparing a Phase I Environmental Site Assessment for Battery Park City, Manhattan New York Block and -Lots 14 -25, 142 -50, 16 -215, 16 -210, 16 -200, 16 -190, 16 -180, 16 -270, 16 -225, 16 -150, 16 -125, 16 -100, 16 -95, 16 -110, 16 -80, 16 -90, 16 -65, 16 -60, 16 -45, 16 -20, 16 -25, 16 -15, 16 -10, 16 -3 and 3 -1 Matrix is requesting information/files including but not limited to: petroleum/chemical bulk storage, underground/aboveground storage tanks, spills/releases of petroleum and/or hazardous materials, the presence of septic systems, monitoring wells, vapor intrusion, environmental violations, environmental inspections/investigations, environmental remediation activities, and any other environmental reports.**

You can monitor the progress of your request at the link below and you'll receive an email when your request has been completed. Again, thank you for using the FOIL Center.

RE: PUBLIC RECORDS REQUEST of 7/1/2021, Reference # W085352-070121

Date: 07/07/2021

Dear Chi Yum,
I write in response to your Freedom of Information Law (FOIL) request seeking:

> *Matrix is preparing a Phase I Environmental Site Assessment for Battery Park City, Manhattan New York Block and -Lots 14 -25, 142 -50, 16 -215, 16 -210, 16 -200, 16 -190, 16 -180, 16 -270, 16 -225, 16 -150, 16 -125, 16 -100, 16 -95, 16 -110, 16 -80, 16 -90, 16 -65, 16 -60, 16 -45, 16 -20, 16 -25, 16 -15, 16 -10, 16 -3 and 3 -1 Matrix is requesting information/files including but not limited to: petroleum/chemical bulk storage, underground/aboveground storage tanks, spills/releases of petroleum and/or hazardous materials, the presence of septic systems, monitoring wells, vapor intrusion, environmental violations, environmental inspections/investigations, environmental remediation activities, and any other environmental reports.*

Please be advised that a diligent search of the files maintained by DEC produced no responsive records.

If you believe you have been unlawfully denied access to responsive records, you have the right to appeal. Any such appeal must be submitted in writing and within thirty (30) days of the date of this email. Appeals must be directed to:

> FOIL Appeals Officer
> Office of General Counsel
> New York State Department of Environmental Conservation
> 625 Broadway, 14th Floor
> Albany, NY 12233-1500

Your FOIL request is now closed. If I can be of further assistance, please contact me at (718) 482-4912 and reference FOIL #W085352-070121, or simply reply to this email. Thank you.

Sincerely,

Region 2 FOIL Coordinator

FOIL #: 21-07-026
Re: Battery Park City, Manhattan, NY

Dear Patrick Yum:

This will acknowledge receipt of your request for records under the Freedom of Information Law (FOIL), received by this office on July 2, 2021.

Your request has been forwarded to the appropriate Department program area(s) to identify documents that are responsive to your request and which may be made available pursuant to all applicable provisions of the Freedom of Information Law.

A determination as to whether your request is granted or denied will be reached in approximately 20 business days or we will notify you in writing if the responsible program area(s) should require additional time to locate, assemble, and review documents that may be responsive to your request.

Please note that, pursuant to Article 6 of the Public Officers Law, a charge may be applied to your request, including the actual cost of the medium used to respond to your Freedom of Information Law request and/or other related costs. When responsive records have been identified, you will be informed of any cost and how payment should be made.

Sincerely,

Rosemarie Hewig

Rosemarie Hewig, Esq.
Records Access Officer

donotreply@records.nyc.gov <donotreply@records.nyc.gov>

Fri 7/9/2021 3:11 PM

To: Patrick Yum <pyum@matrixneworld.com>

[EXTERNAL]

The Mayor's Office of Environmental Remediation (OER) has **closed** your FOIL request FOIL-2021-002-00425 for the following reasons:

- A diligent search for records responsive to your request did not locate any such records. Accordingly, your request is denied.

You may appeal the decision to deny access to material that was redacted in part or withheld in entirety by contacting the agency's FOIL Appeals Officer: foil-oer@cityhall.nyc.gov within 30 days.

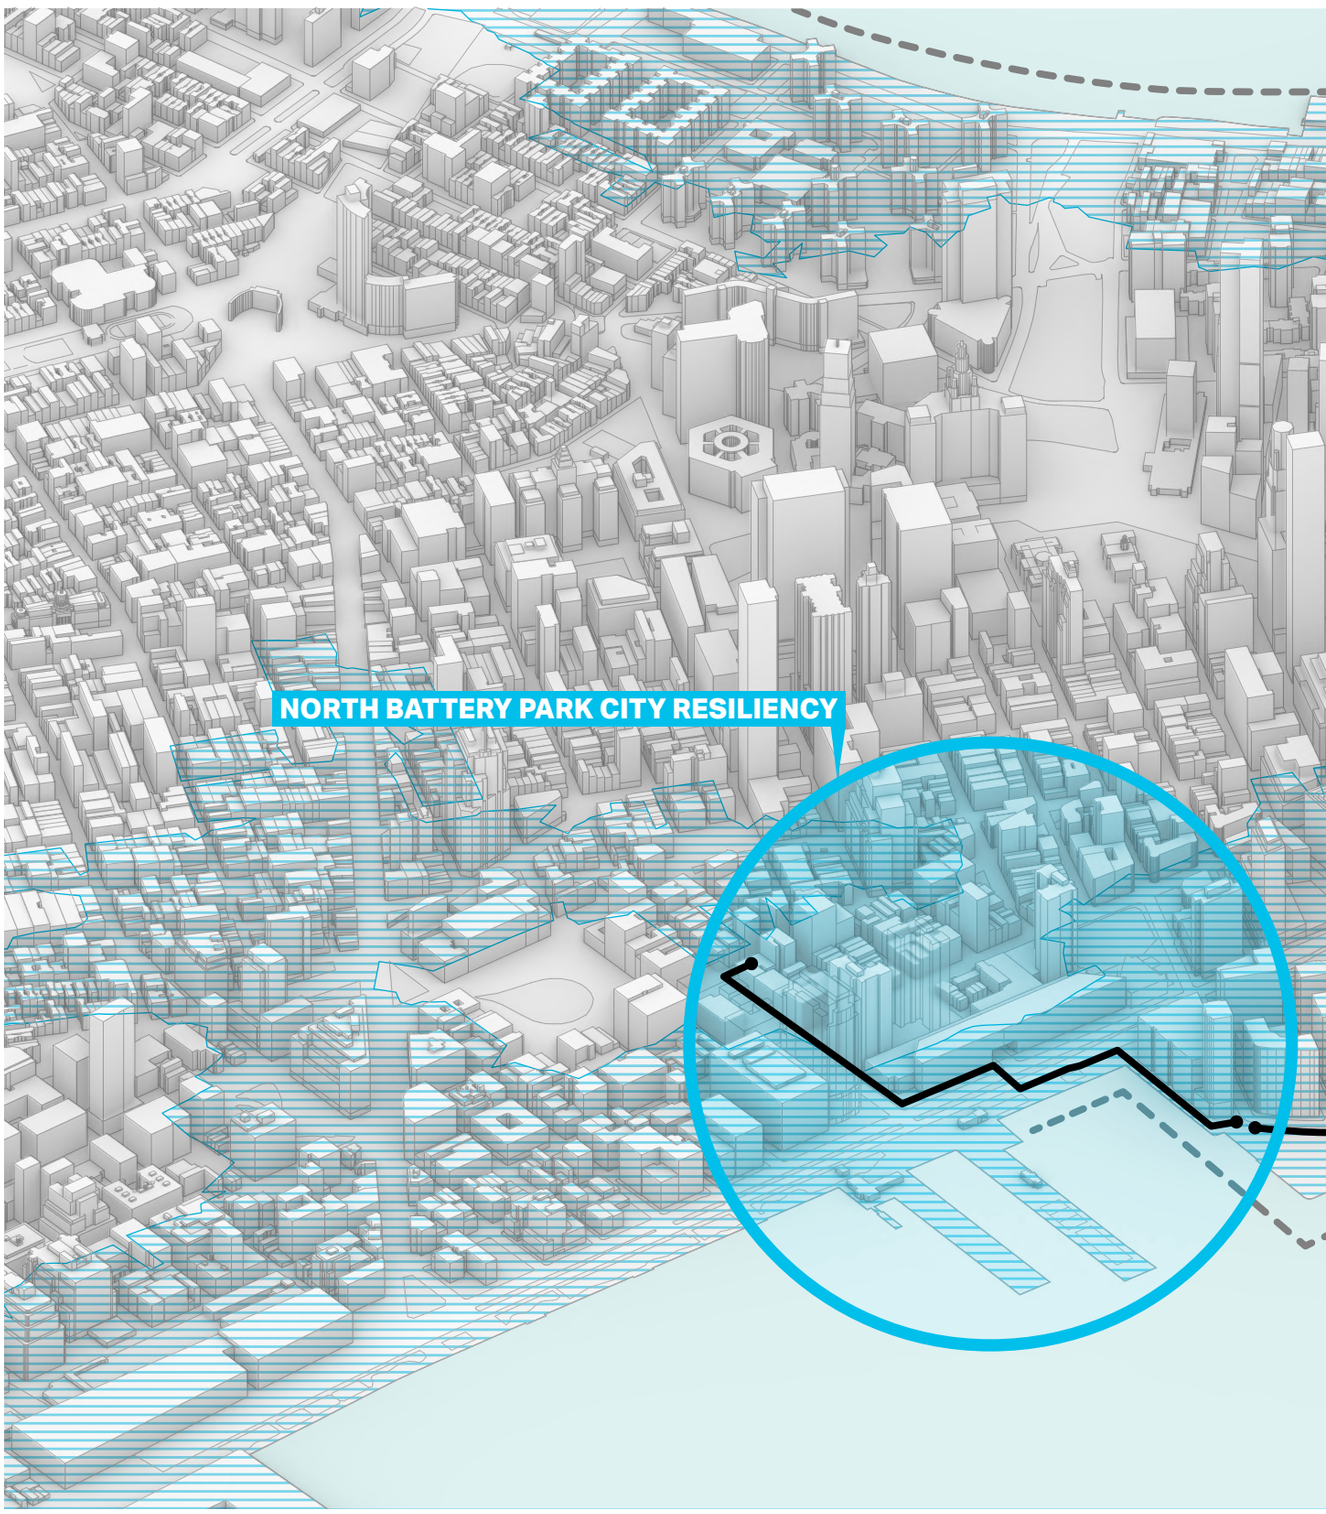
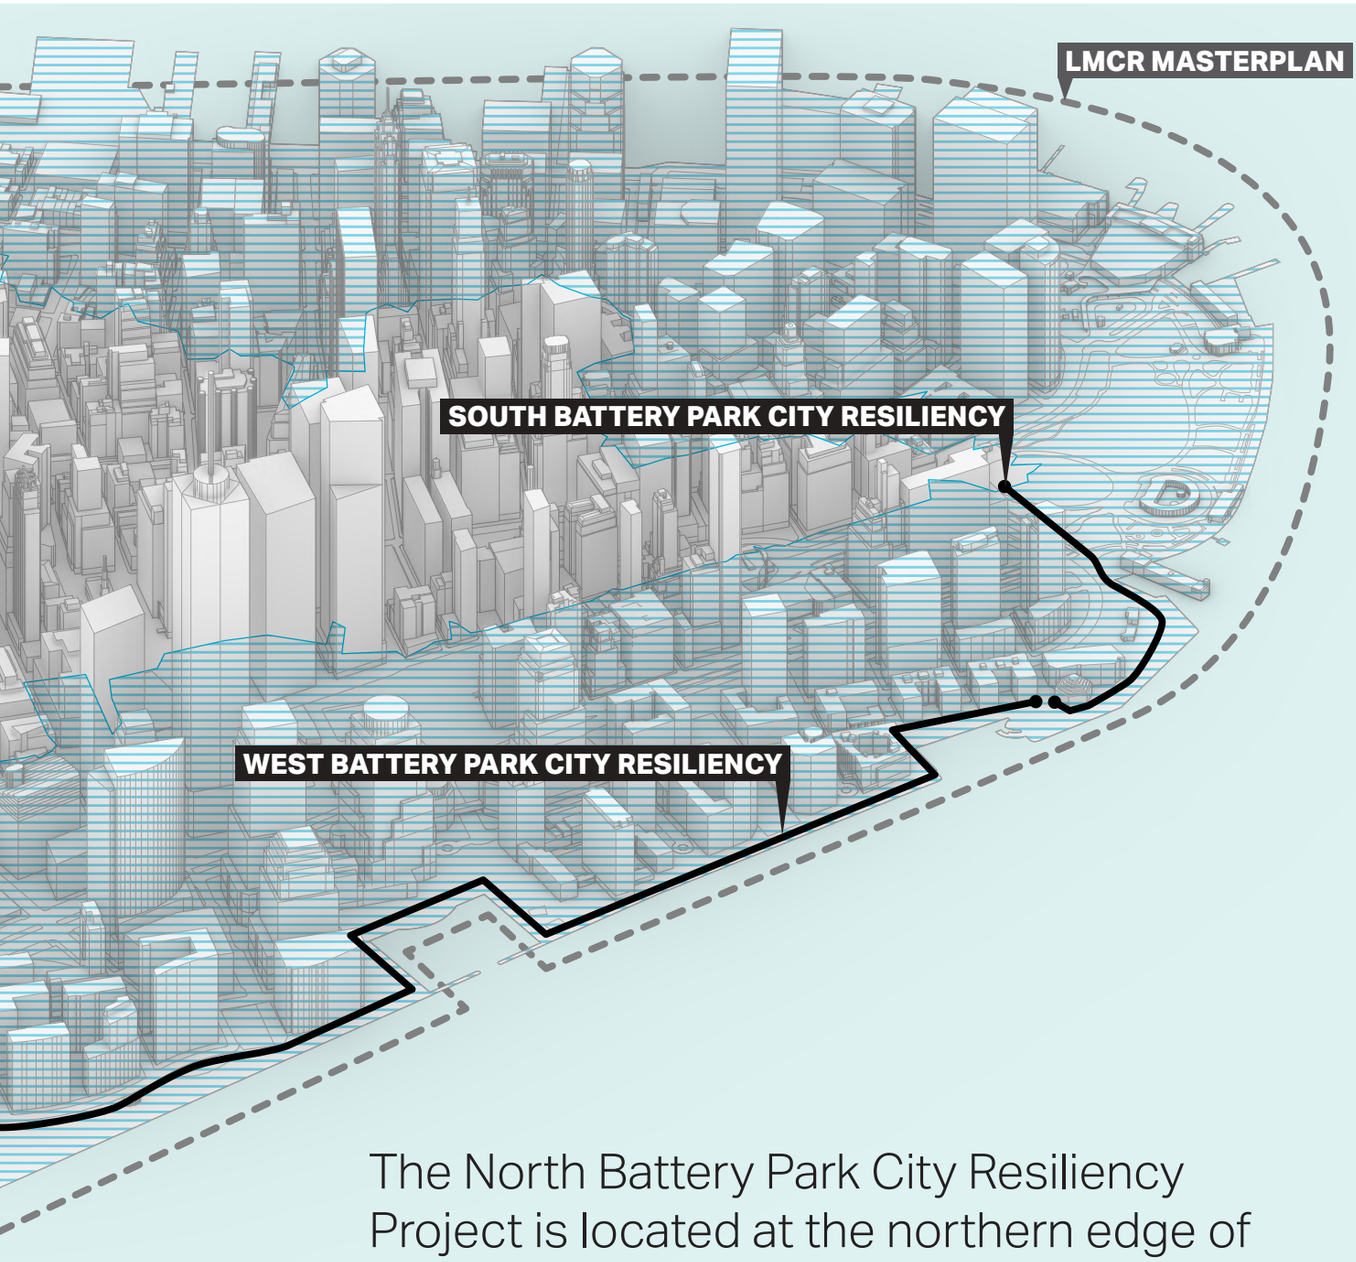
INTRODUCTION

NBPC RESILIENCY





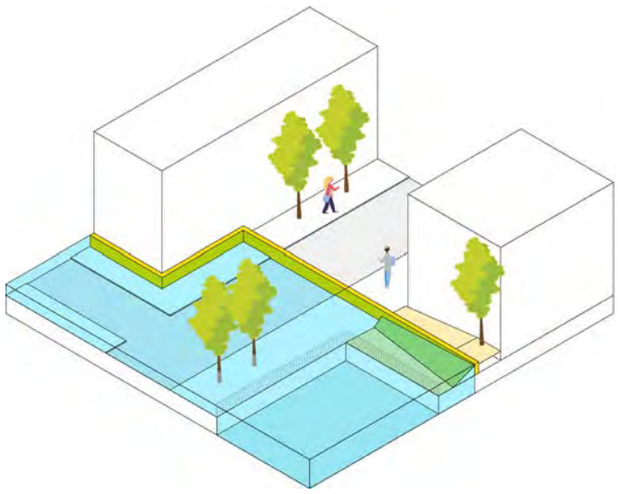
The North Battery Park City Resiliency Project is located at the northern edge of Battery Park City and crosses Route 9A into TriBeCa. It is the northern terminus of the Battery Park City Resiliency Projects.

THE CHALLENGE

FLOODING AT ROCKEFELLER PARK FROM HURRICANE SANDY

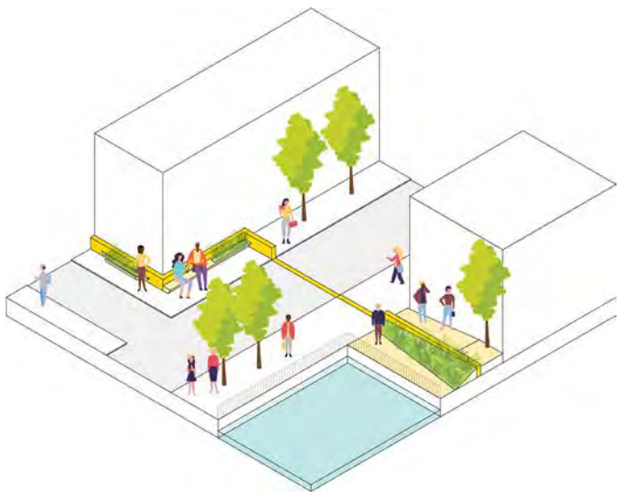
Source: The Tribeca Trib / Photo by Carl Glassman

Climate change induced sea level rise accompanied by more frequent, intense storm events and storm surges are a significant risk to coastal communities around the world. Superstorm Sandy accentuated the impacts of these types of events in the New York City area and Battery Park City in 2012. Coastal communities must address these risks and create more resilient places to live and work, while simultaneously prioritizing design strategies that improve the quality of life and livibility in city spaces. Innovative design strategies are required to implement multi-purpose resilient infrastructures that mitigate this risk and support waterfront access and recreation.



RESILIENCY MEASURES

+



PUBLIC BENEFIT

=

MULTI-PURPOSE PERFORMANCE

RESILIENCE MEASURES

At the core of these systems is the need for reduced risk of flooding. Resilience is a necessary design objective for each element of each project. The resilient infrastructure can include passive or deployable infrastructure types, or a mix of both as a part of a comprehensive coastal resilience strategy.

PUBLIC BENEFIT

Integrating public benefits into multi-purpose flood resilience systems is critical for project success. Implementing flood risk reduction strategies is a challenge for many coastal cities due to complex existing conditions and spatial constraints within the built environment. Open space networks and other public spaces are often attractive areas to implement resilient landscape infrastructure strategies. This is a challenge for project success if community priorities for these public spaces is not carefully considered and integrated into a multi-purpose resiliency approach. Adding additional function and community benefit to the flood risk reduction system can enhance the opportunity for the implementation of these resilience tactics, and can help to build community support for projects and encourage long term community buy-in and care for system that integrate their public space priorities and may even enhance existing public spaces.

MULTI-PURPOSE SYSTEMS

Multi-purpose coastal resiliency systems prioritize landscape infrastructure solutions to coastal resilience challenges in tandem with the delivery of other public benefits for the community.

BPC TIMELINE

"Battery Park City and the Authority are not just about the buildings – it's about the character of the community that has developed over time. Public space has had a new renaissance in New York City, but here in Battery Park City is where it started."

B.J. JONES
President & CEO

Battery Park City is a planned residential community on the west side of the southern tip of the of Manhattan. It is bounded by the Hudson River on the west, the Hudson River shoreline on the north and south, and the West Side Highway (Route 9A) on the east. More than one-third of the development is parkland.

The land upon which it is built was created by land reclamation on the Hudson River using over 3 million cubic yards of soil and rock excavated during the construction of the World Trade Center, the New York City Water Tunnel, and certain other construction projects, as well as from sand dredged from New York Harbor off Staten Island.

02
SITE UNDERSTANDING

THE TWO LENSES

Understanding the site requires an evaluation of two critical components of what will ultimately lead to project success:

PHYSICAL IMPACTS

The nature of existing site characteristics drives the development of design strategies. Open space networks, topography and visual corridors present on site today are the first aspects to consider in design studies for possible project alignments.

TIMELINE IMPACTS

Other factors influence the impacts and timing of construction. Land ownership, land use, transportation and infrastructure networks, historical sites, and associated permitting are important to consider in the development of design alternatives to mitigate impacts to project schedule.

Engagement with key stakeholders identifies site conditions and project alignment options that may impact the project timeline.

OPEN SPACE

The open spaces located within and around the project area are beloved by the community. A mix of active and passive programming can be found throughout. Examples of programming types are shown in the site photos below.

Physical impacts to the open spaces primarily affected by this project have been evaluated through multiple design options. These include The North Esplanade, Rockefeller Park, and the Basketball Courts along Route 9A.

TOPOGRAPHY

The project alignment completes the western terminus of the Lower Manhattan Coastal Resiliency, and must use the existing topography to tie back the project to high ground. The existing topography in the project area varies from +10 NAVD88 at the Esplanade, to +18 NAVD88 near the tie-back location.

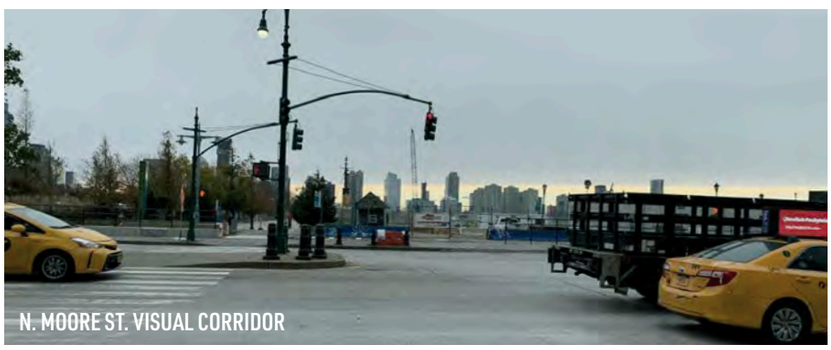
VISUAL CORRIDORS

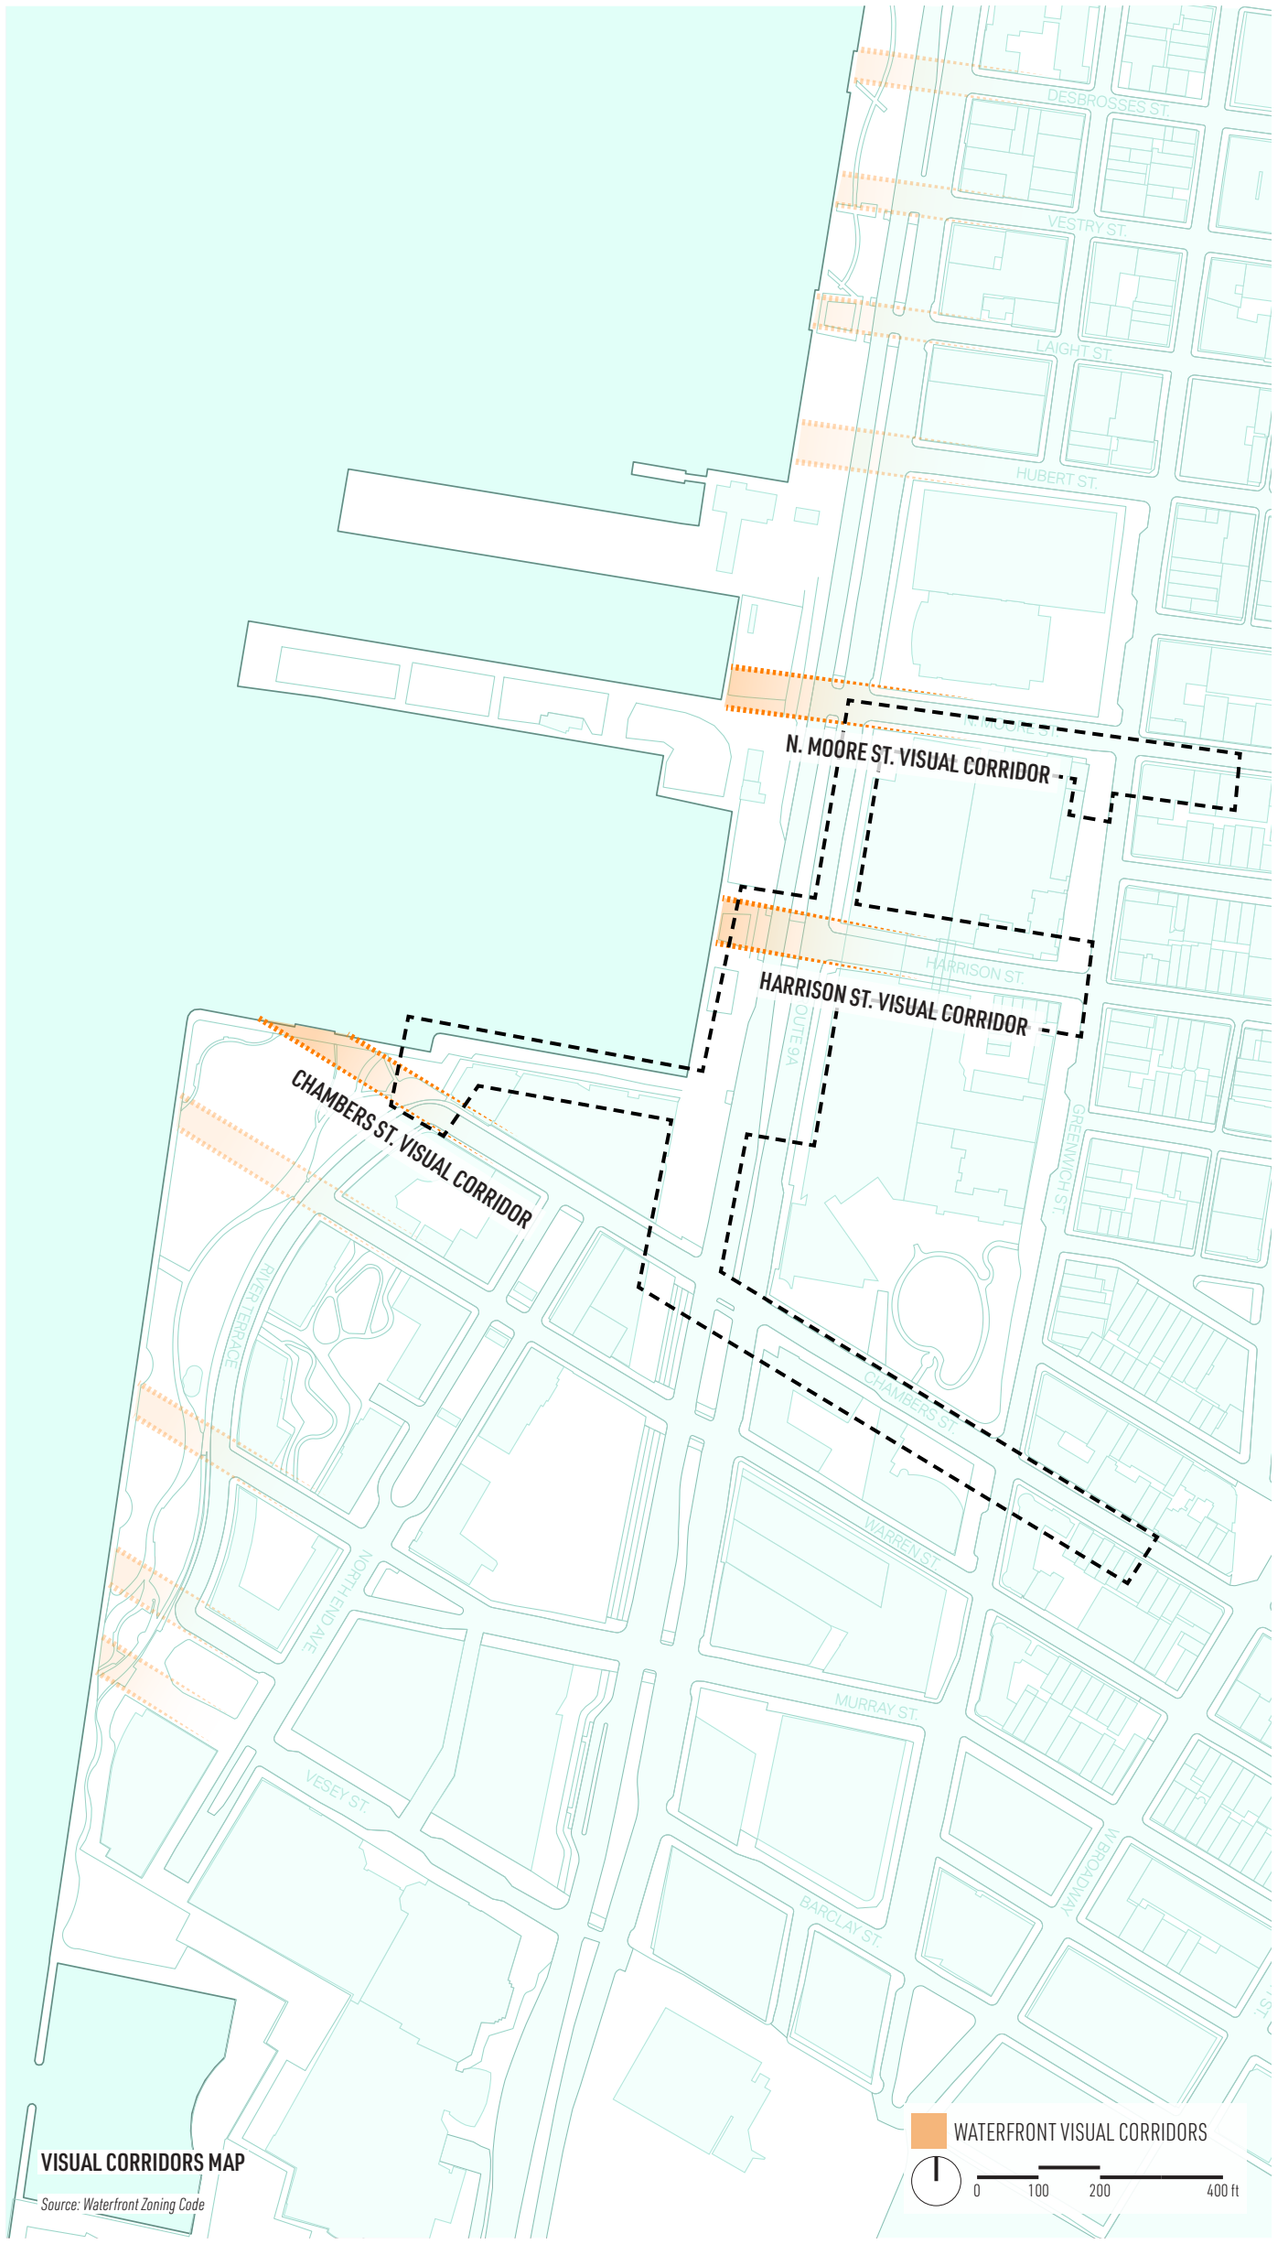
Visual connections from inland areas to the Hudson River waterfront are a valued characteristic of both the Battery Park City and Tribeca neighborhoods. The Chambers St visual corridor provides a connection with the Hudson River waterfront and Battery Park City's Rockefeller Park. The Harrison St and North Moore St visual corridors run in an east/west direction and provide visual corridors and connections to the Hudson River waterfront and Hudson River Park across the West Side Highway for the Tribeca neighborhood.

CHAMBERS ST. VISUAL CORRIDOR

HARRISON ST. VISUAL CORRIDOR



N. MOORE ST. VISUAL CORRIDOR



VISUAL CORRIDORS MAP

Source: Waterfront Zoning Code

LAND USE

Land use types vary widely throughout the project area. In Battery Park City, a mix of open space and outdoor areas flank the waterfront. Residential, and mixed use areas affront the open spaces to the west and south, and public facilities including Stuyvesant High School and BMCC are located along the esplanade and west side highway. As the project area enters Tribeca, smaller parcel sizes lead to a denser grouping of varied land uses. Open space becomes limited, and land uses are dominated by a mix of residential, mixed use and commercial spaces. Land use is critical to identifying the type of users that habitate the area. of study.

LAND USE MAP

Source: NYC OpenData PLUTO 19v1

HISTORIC SITES

The project area within the historic neighborhood of Tribeca is comprised of two historic districts (Tribeca North and Tribeca West Historic District), and includes a number of individual landmark sites. These districts and properties are important aspects to consider. A successful project alignment must be cognizant and respectful of existing historic elements.

Any adverse impacts on historic elements should be avoided if possible, and understanding the impacts on project schedule as it relates to historic sites is important.

TRIBECA WEST HISTORIC DISTRICT

TRIBECA NORTH HISTORIC DISTRICT

HISTORICAL SITES MAP

Source: NYC OpenData PLUTO 19v1

TRANSPORTATION

Transportation and pedestrian circulation networks in the project area include high speed arterials such as the West Side Highway, dedicated bike lanes, sidewalk and waterfront esplanade pedestrian spaces, and public transportation bus routes. The project will maintain all existing circulation networks.

03
DESIGN ZONES

THE DESIGN ZONES

The Project Area was divided into two design zones. Each zone responds to an specific character and constraints.

ZONE 1

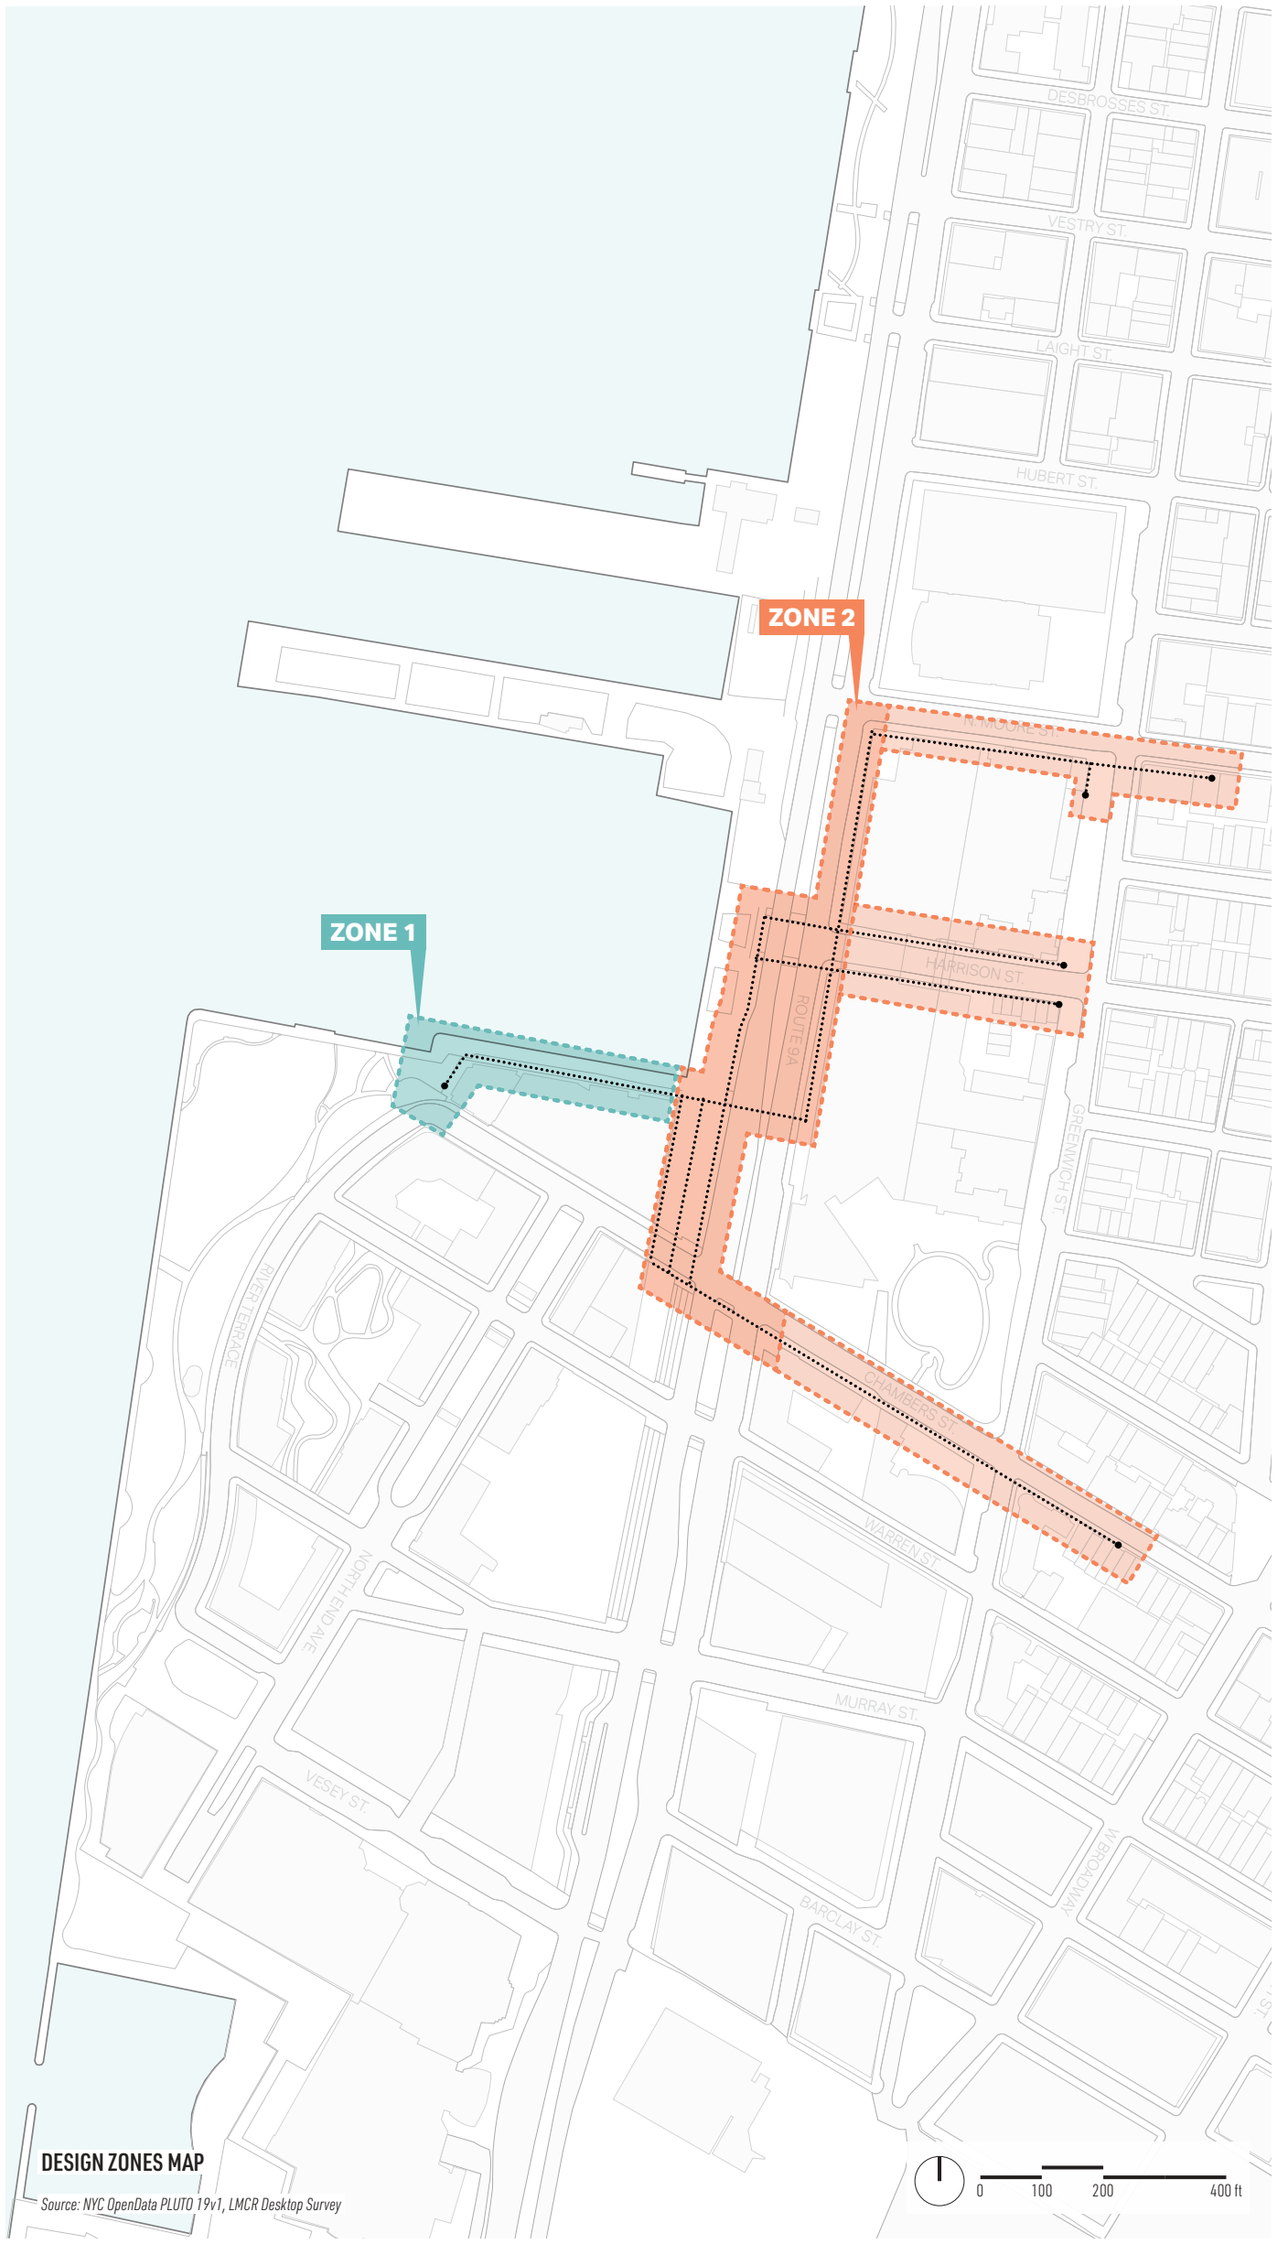
Zone one encompasses the The “Esplanade” portion of the Battery Park City North Resilience Project. The existing esplanade in this area will be re-imagined to integrate flood risk reduction infrastructure while maintaining and enhancing public benefits associated with the esplanade along the waterfront.

ZONE 2

Zone two is comprised of two sub-sections:

THE CONNECTORS section is located along the West Side Highway and includes portions of existing Hudson River Park and adjacent bike lanes. This area of the project prides the link between the Esplanade portion in Zone 1 and the Tie-Backs portion of Zone 2.

THE TIE-BACKS section is located along the western side of the historic Tribeca community. The connectors provide the critical link between the DFE of the flood resilience system and the natural high point in topography, acting as a tie off for the northern-most end of the flood risk reduction system.



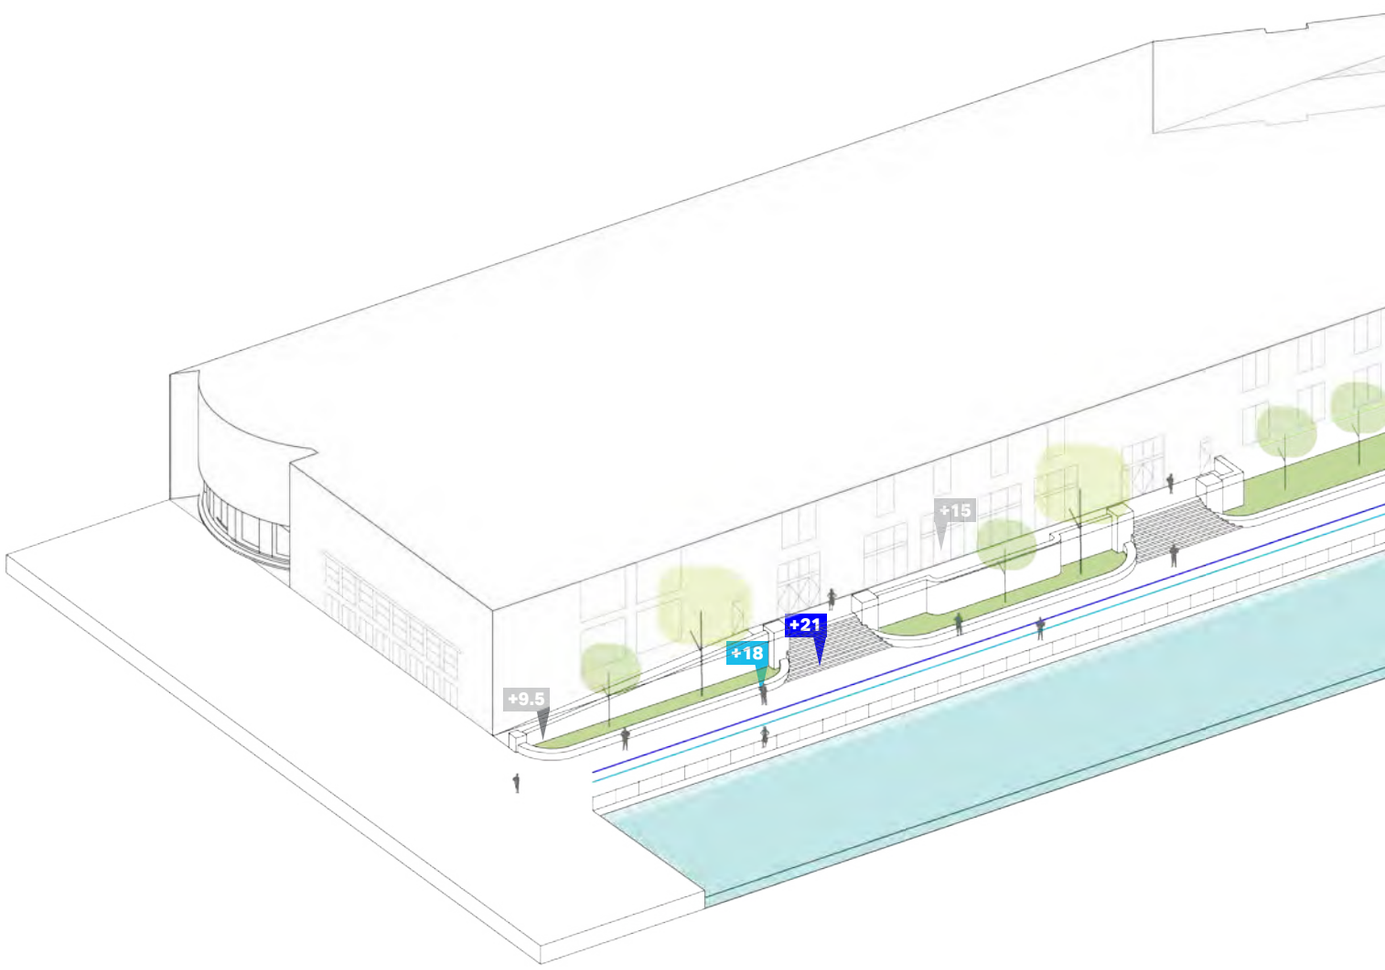
DESIGN ZONES MAP

Source: NYC OpenData PLUTO 19v1, LMCR Desktop Survey

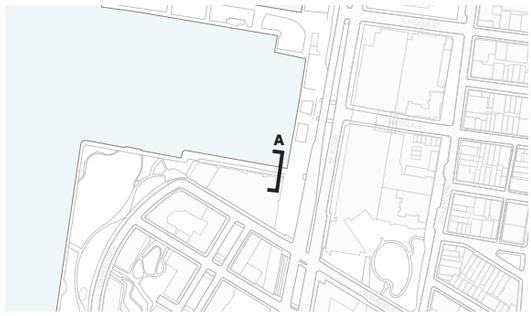
ZONE 1

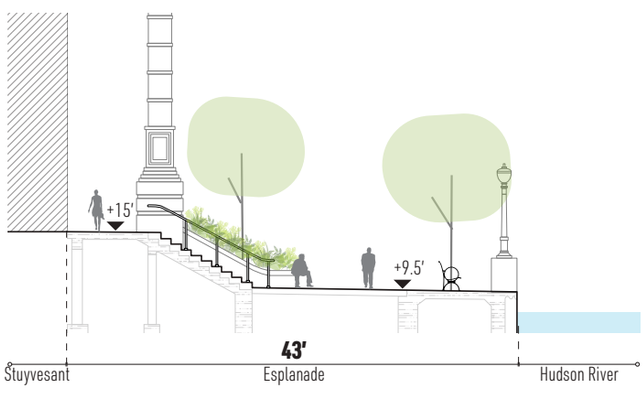
THE ESPLANADE

The esplanade is located at the north end of Battery Park City, connecting to Hudson River Park to the east and to Rockefeller Park to the west. Existing elevations range from 9.5-10.5' EL along the esplanades multi-use path and connect to the variety of egress points for the adjacent buildings. Unit pavers contribute to a pedestrian scale while planter beds with shade trees, retaining walls at seat height and existing benches provide seating opportunities to take in the waterfront views.



Esplanade Existing Conditions



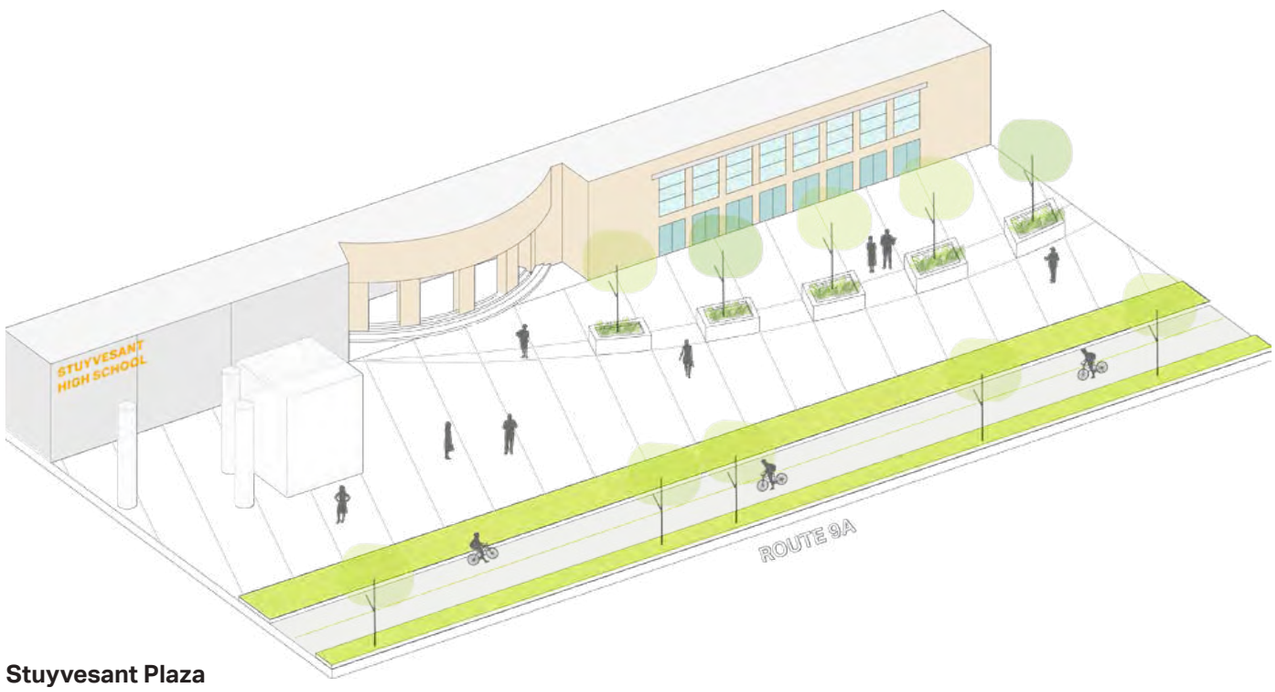


A - Existing Conditions Section

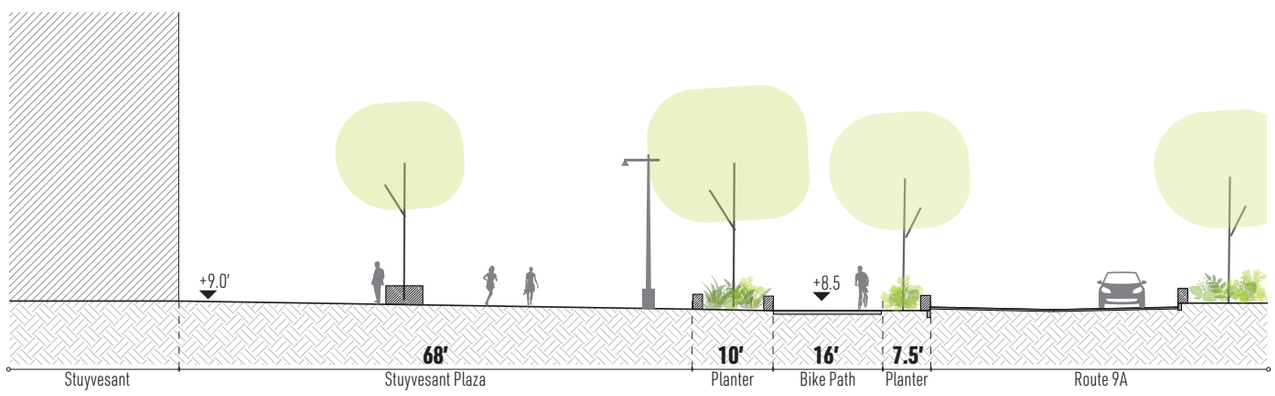
ZONE 2

STUYVESANT PLAZA

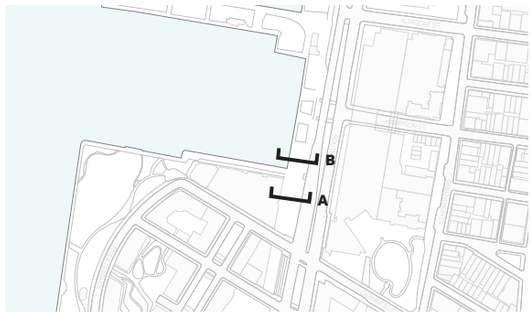
The southern portion of Zone 2 immediately adjacent to Zone 1 is comprised of the Stuyvesant section. This section of Zone 2 includes a main entrance to the high school. This area is largely hardscape in nature, but planted buffers along the bike path and within the plaza provide some area for trees and other plantings.



Stuyvesant Plaza

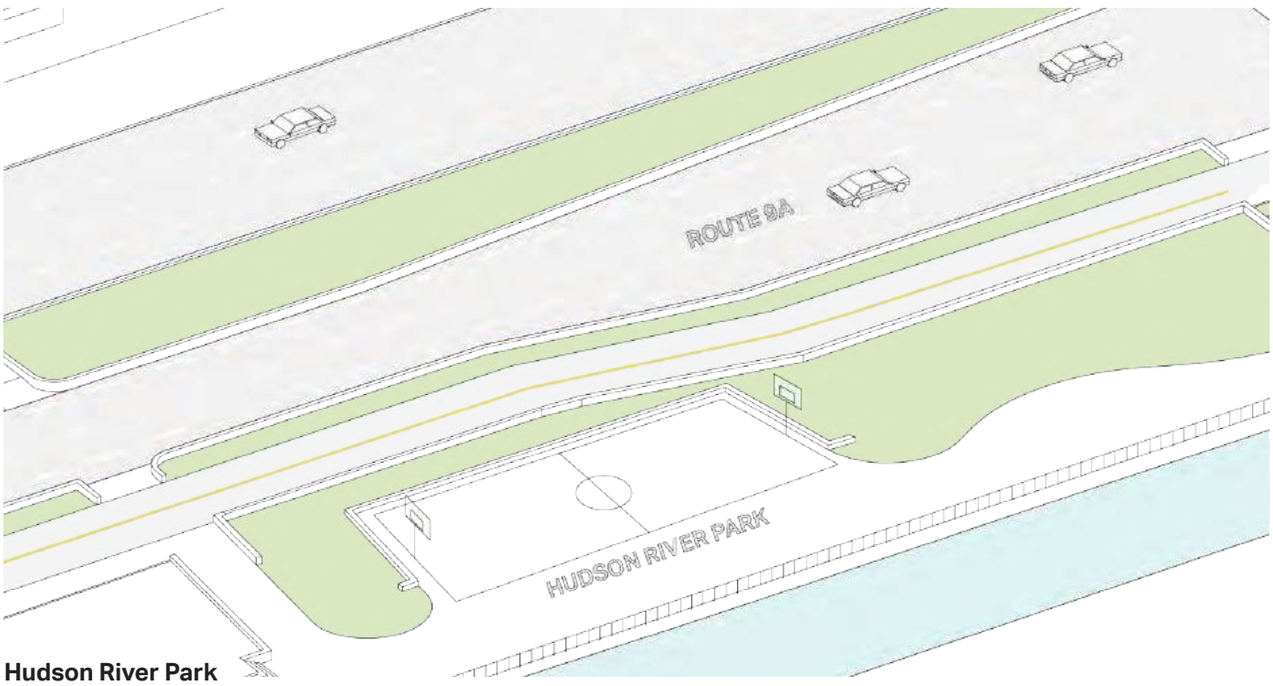


A - Stuyvesant Plaza Section

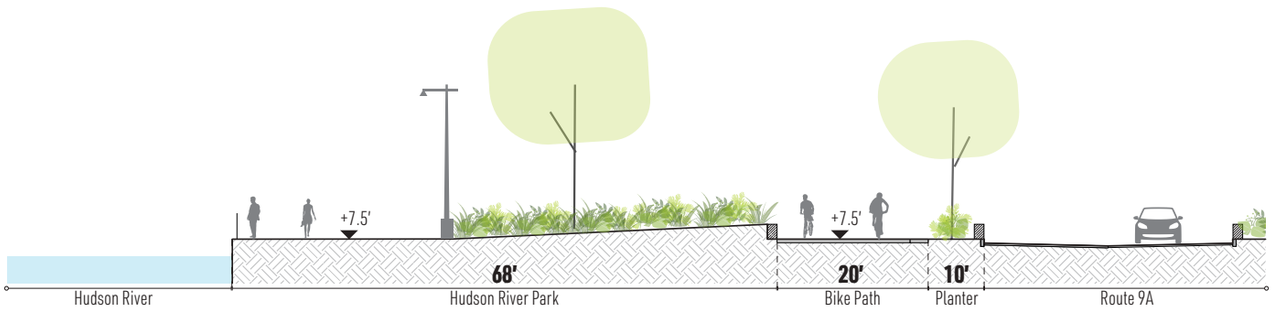


HUDSON RIVER PARK

The northwest portion of Zone 2 is located along the southern end of Hudson River Park. A pedestrian walkway along the waterfront is buffered from the West Side Highway by a row of planting and dedicated bike path.



Hudson River Park

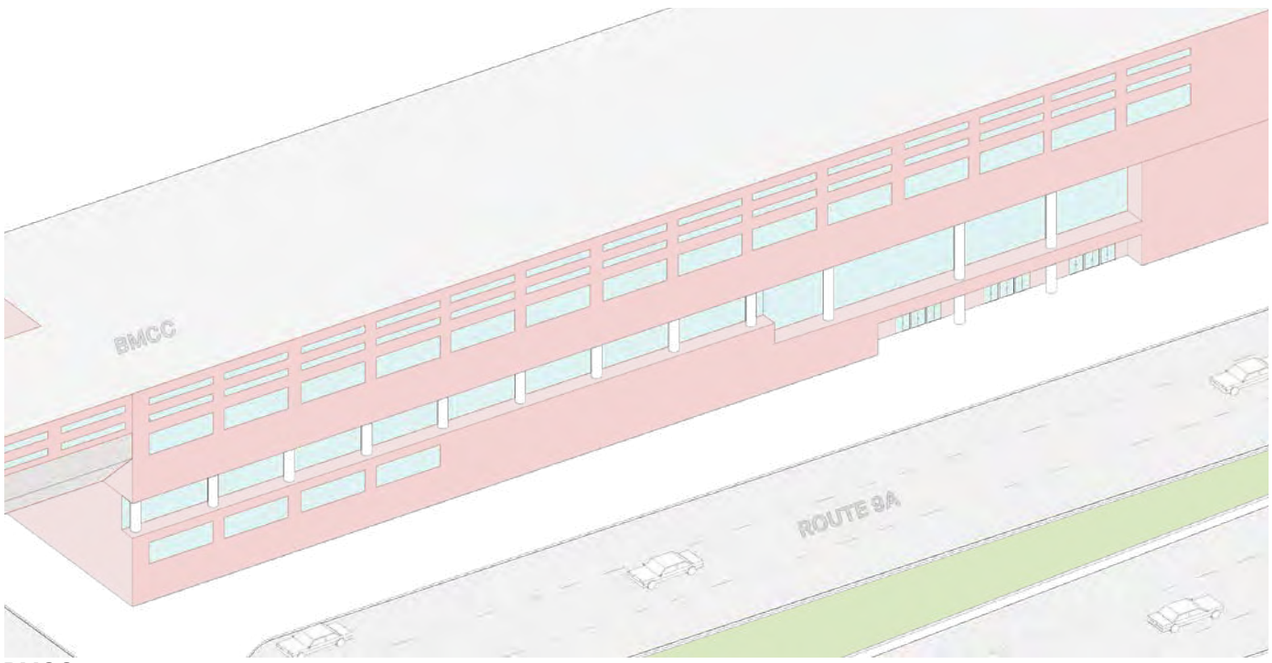


B - Hudson River Park Section

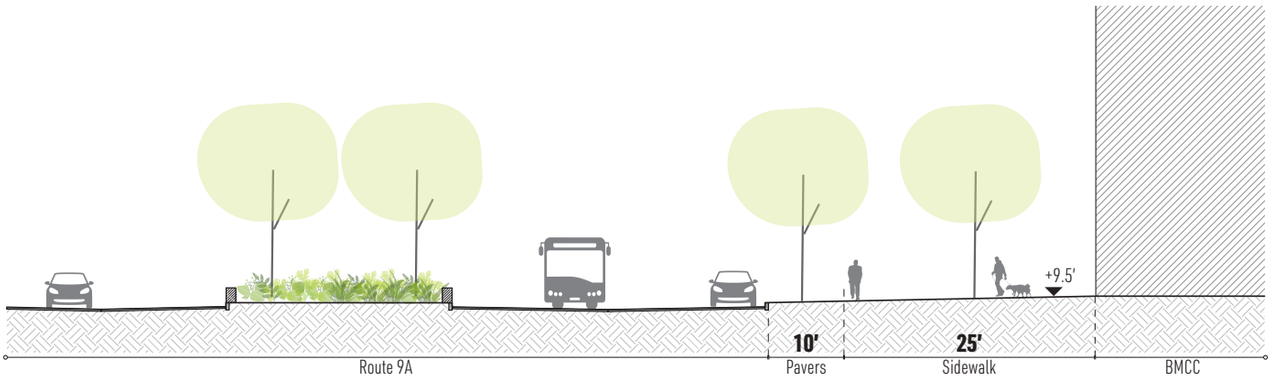
ZONE 2

BMCC

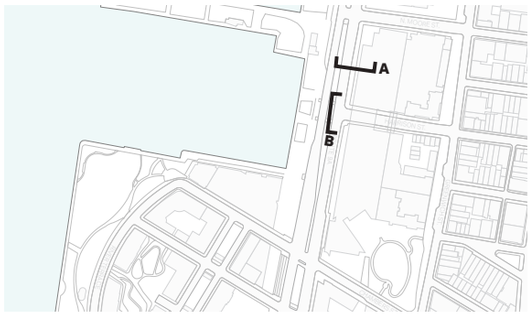
Just east of the West Side Highway the project area flanks BMCC. Existing trees provide shaded to the 25' wide sidewalk adjacent to the building providing ample space for pedestrians. Entries to BMCC are located along the sidewalk.



BMCC

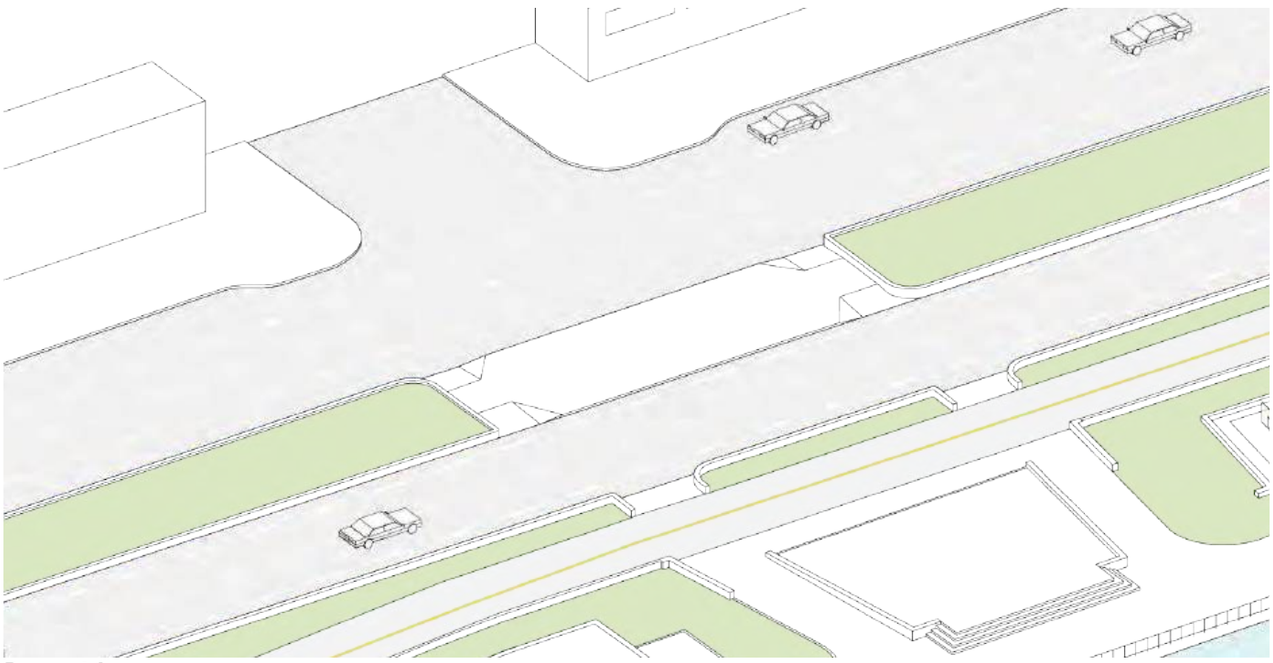


A - BMCC Section

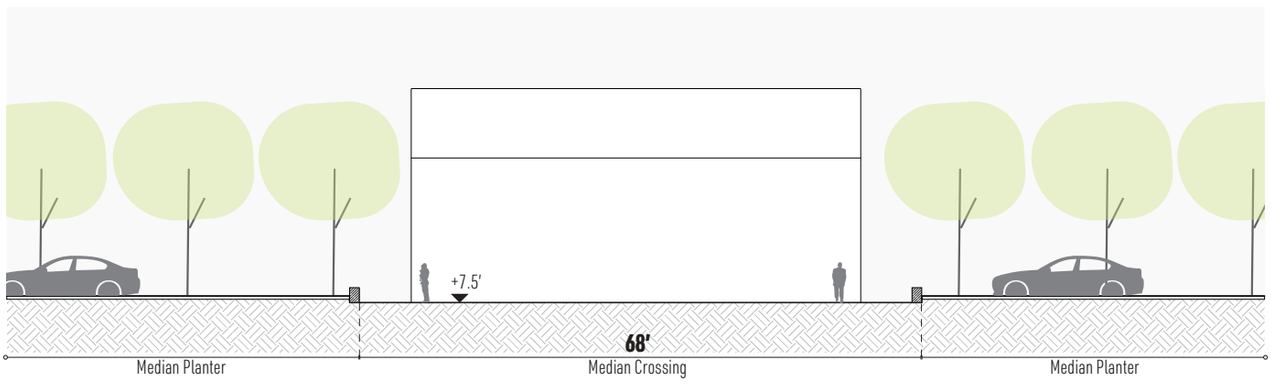


ROUTE 9A

Route 9A, also known as the West Side Highway, runs from West 72nd Street along the Hudson River to the southern tip of Manhattan. It includes 3 traffic lanes in each direction separated by a generous median space with planting and street trees.



Route 9A

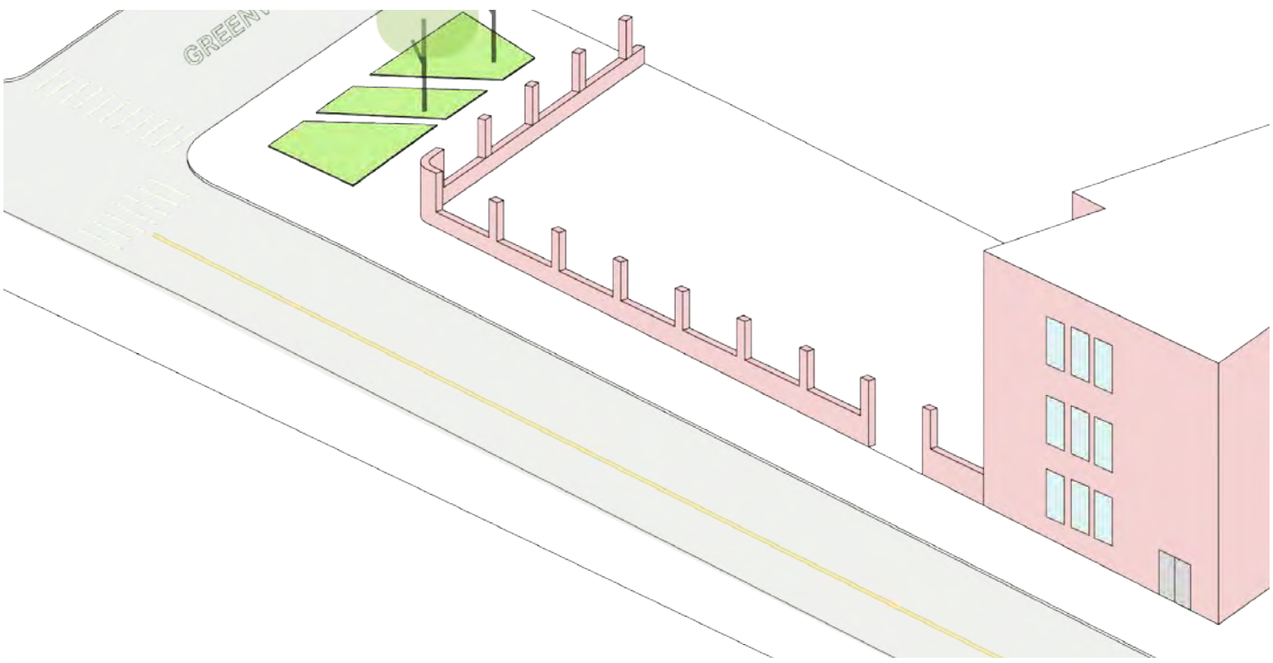


B - Route 9A Section

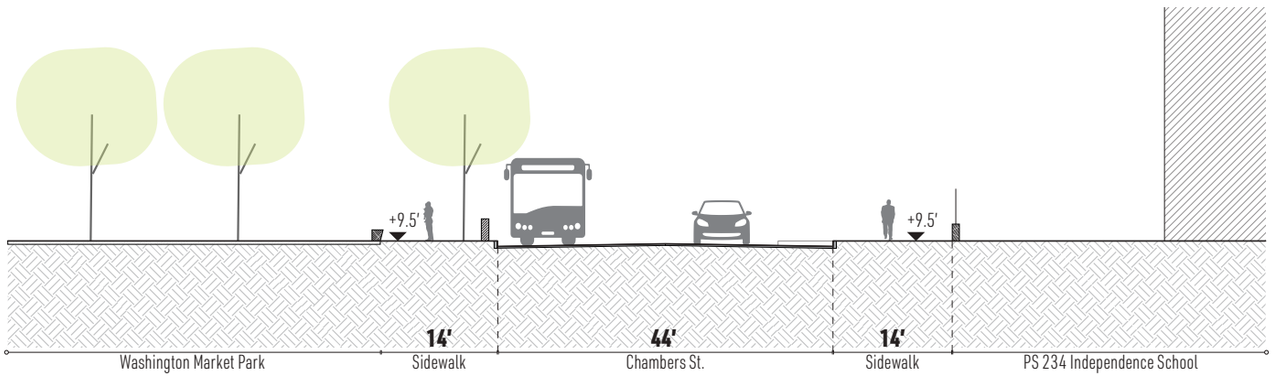
ZONE 2

CHAMBERS ST.

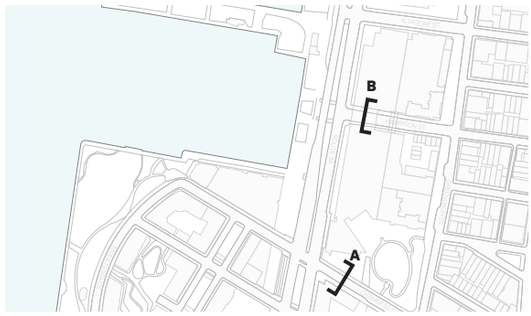
The Chambers St tie-back option is the southern most of the three tie-back opportunities in the site area. On it's western edge the Chamber St tie-back meets up with the Stuyvesant connector at the intersection with the West Side Highway. The 14' wide sidewalk runs parallel to the retaining wall with fence of the adjacent school yard. Trees are planted at the sidewalk edge along the curb line providing shade to both the sidewalk area and portions of the school play area. More generous planters are located in the public realm of the sidewalk at the intersection with Greenwich St.



Chambers St

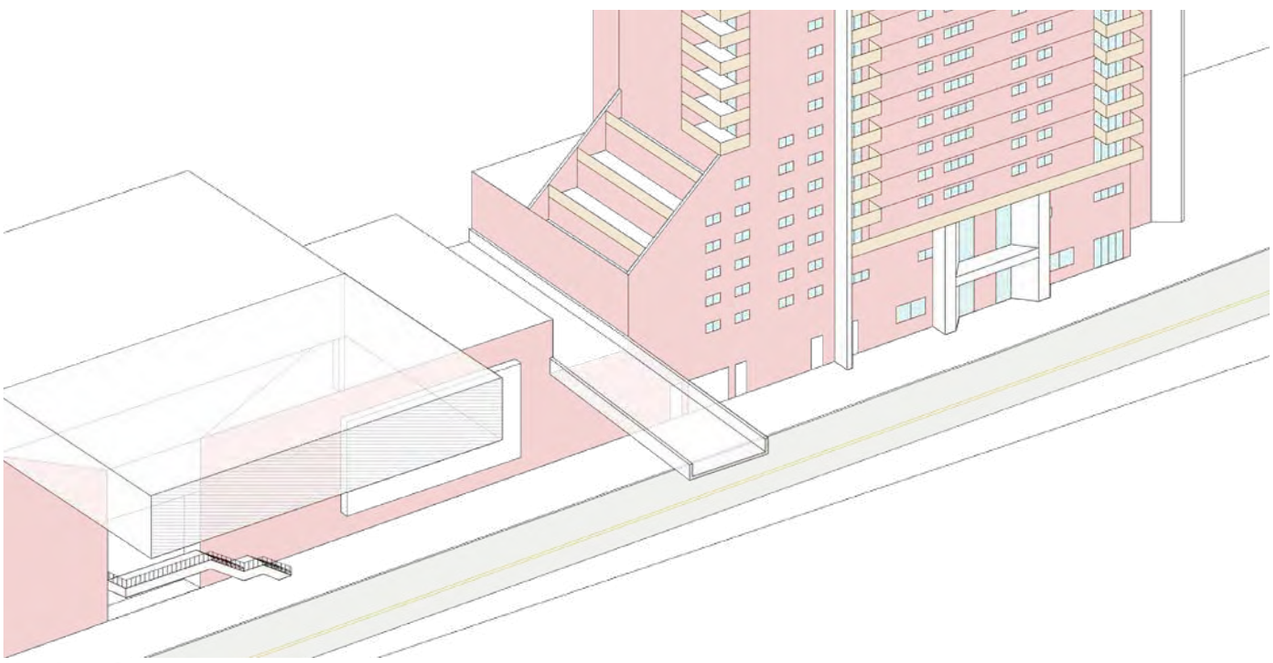


A - Chambers St Section

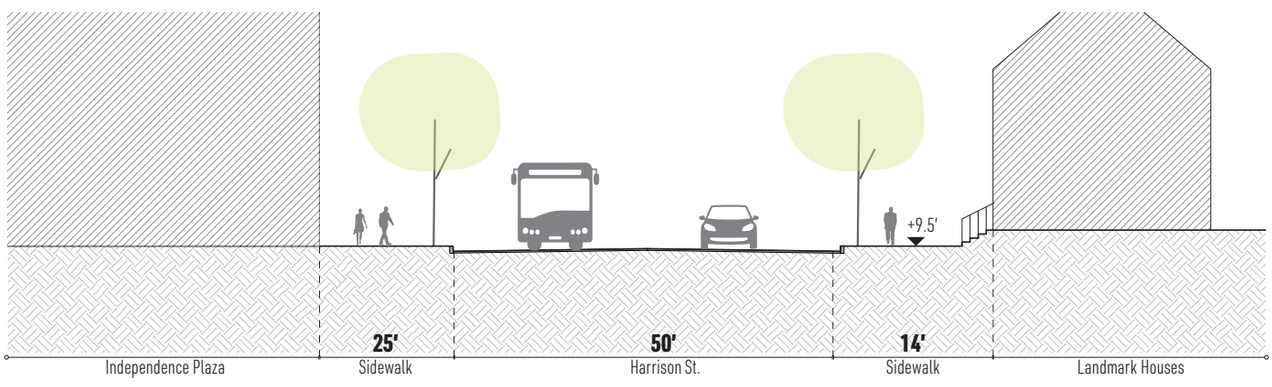


HARRISON ST.

The Harrison St tie-back option is located at the northern end of the Hudson River Parkway connector and extends from the West Side Highway to the East. The sidewalk along the Harrison St tie-back varies in width slightly based on adjacent building footprints, and also provides a variety of access points to BMCC and other buildings along the street. Existing plantings and trees are minimal.



Harrison St

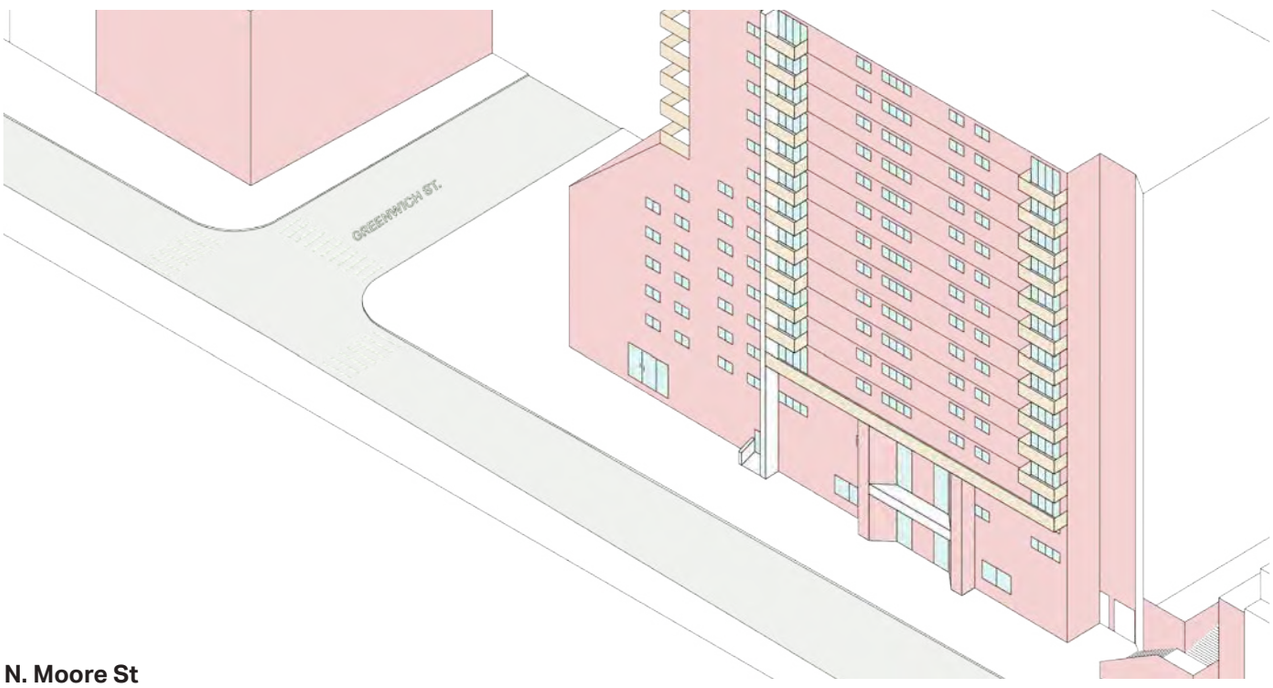


B - Harrison St Section

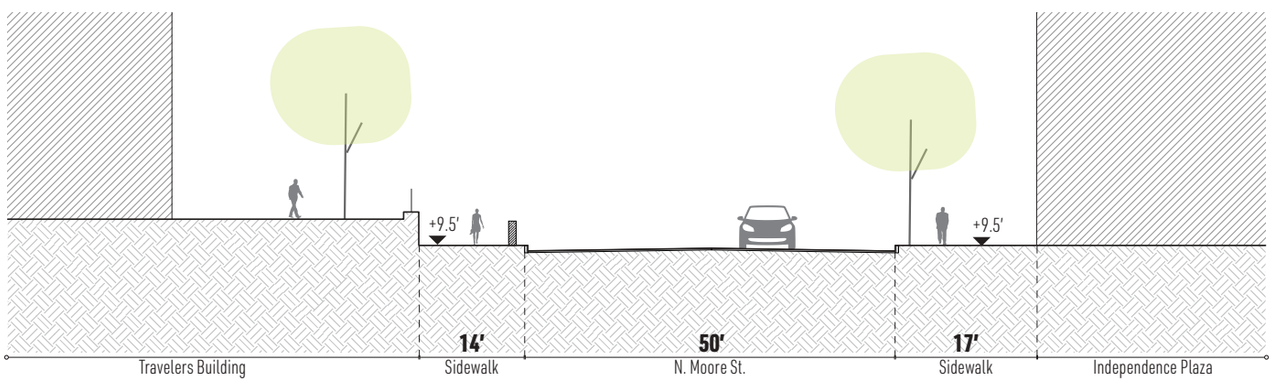
ZONE 2

N. MOORE ST.

The North Moore St tie-back extends from the northern end of the BMCC tie-back at the West Side Highway to the east towards Greenwich St. A 17 foot wide sidewalk provides access to a variety of uses.



N. Moore St



A - N. Moore St Section

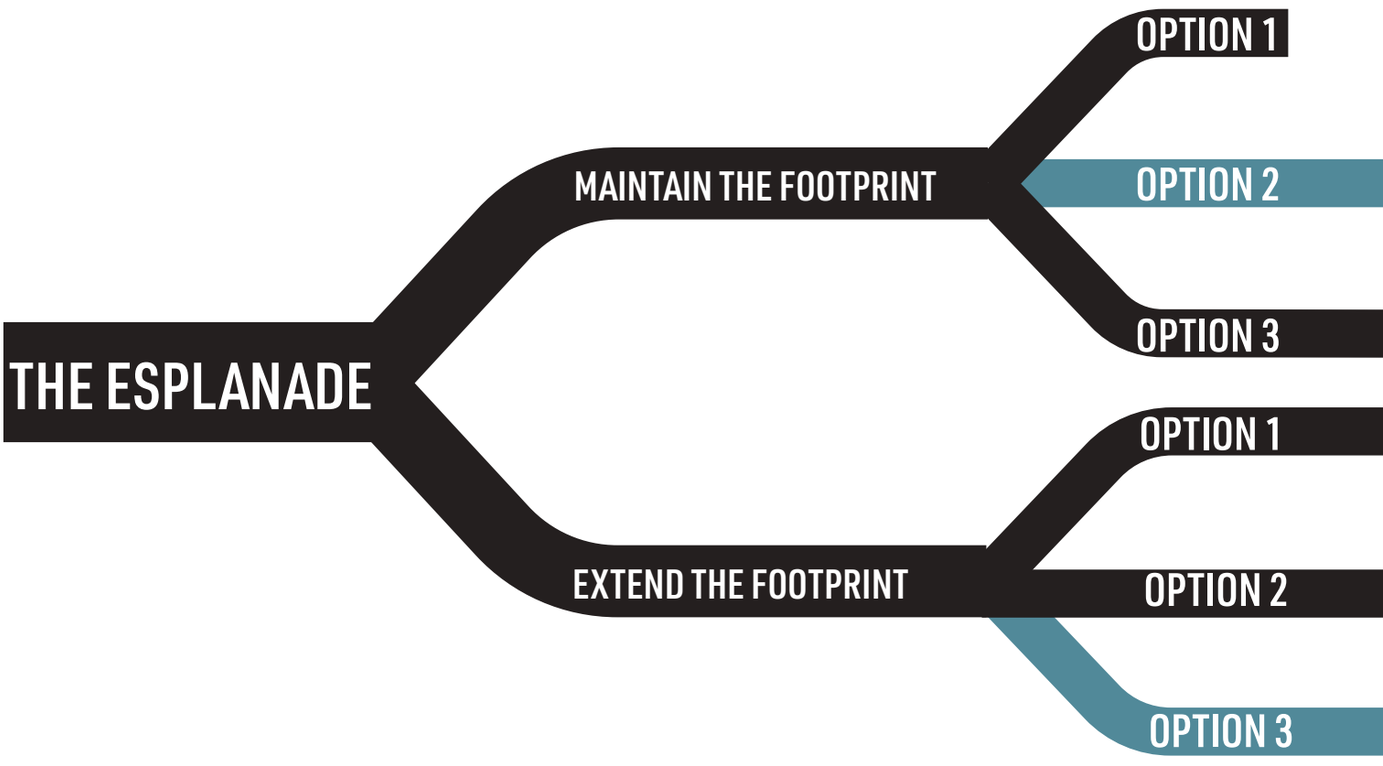
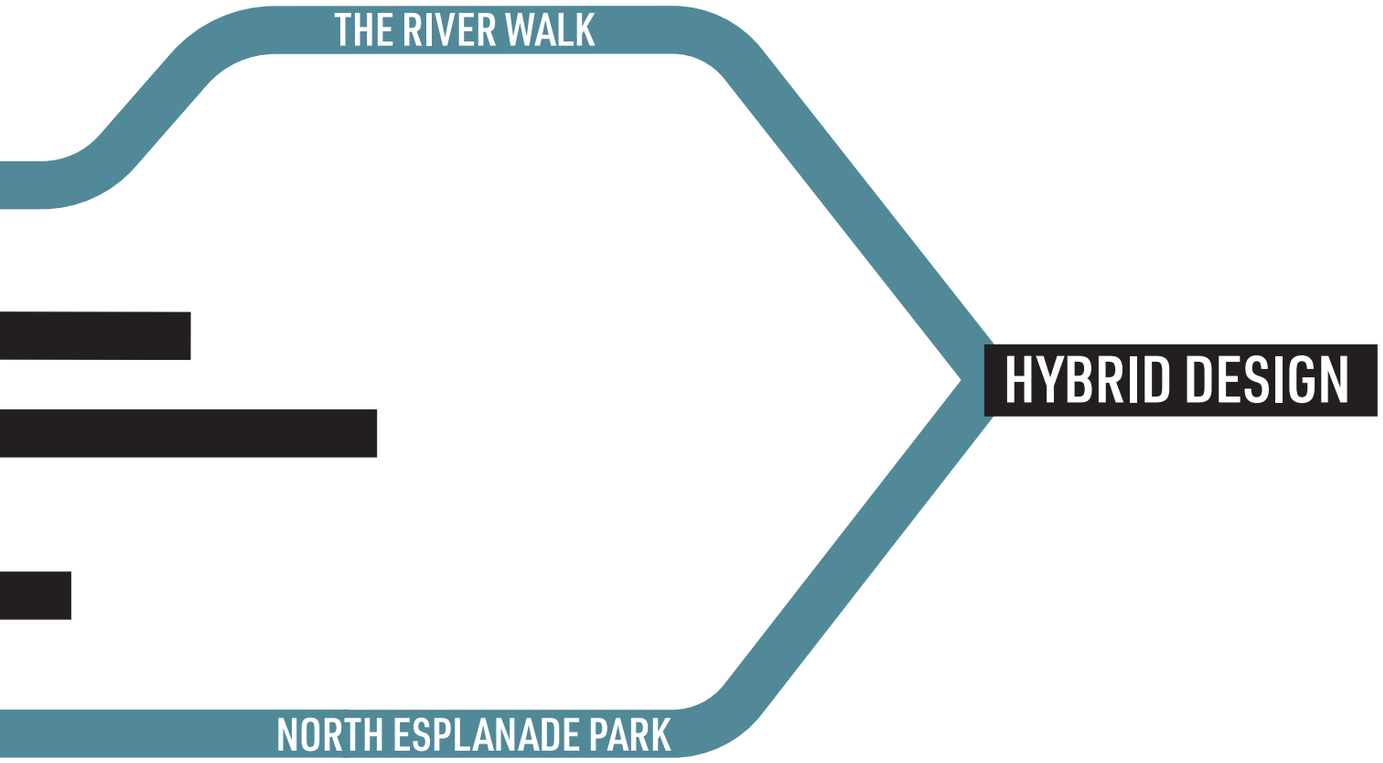
DESIGN EVOLUTION



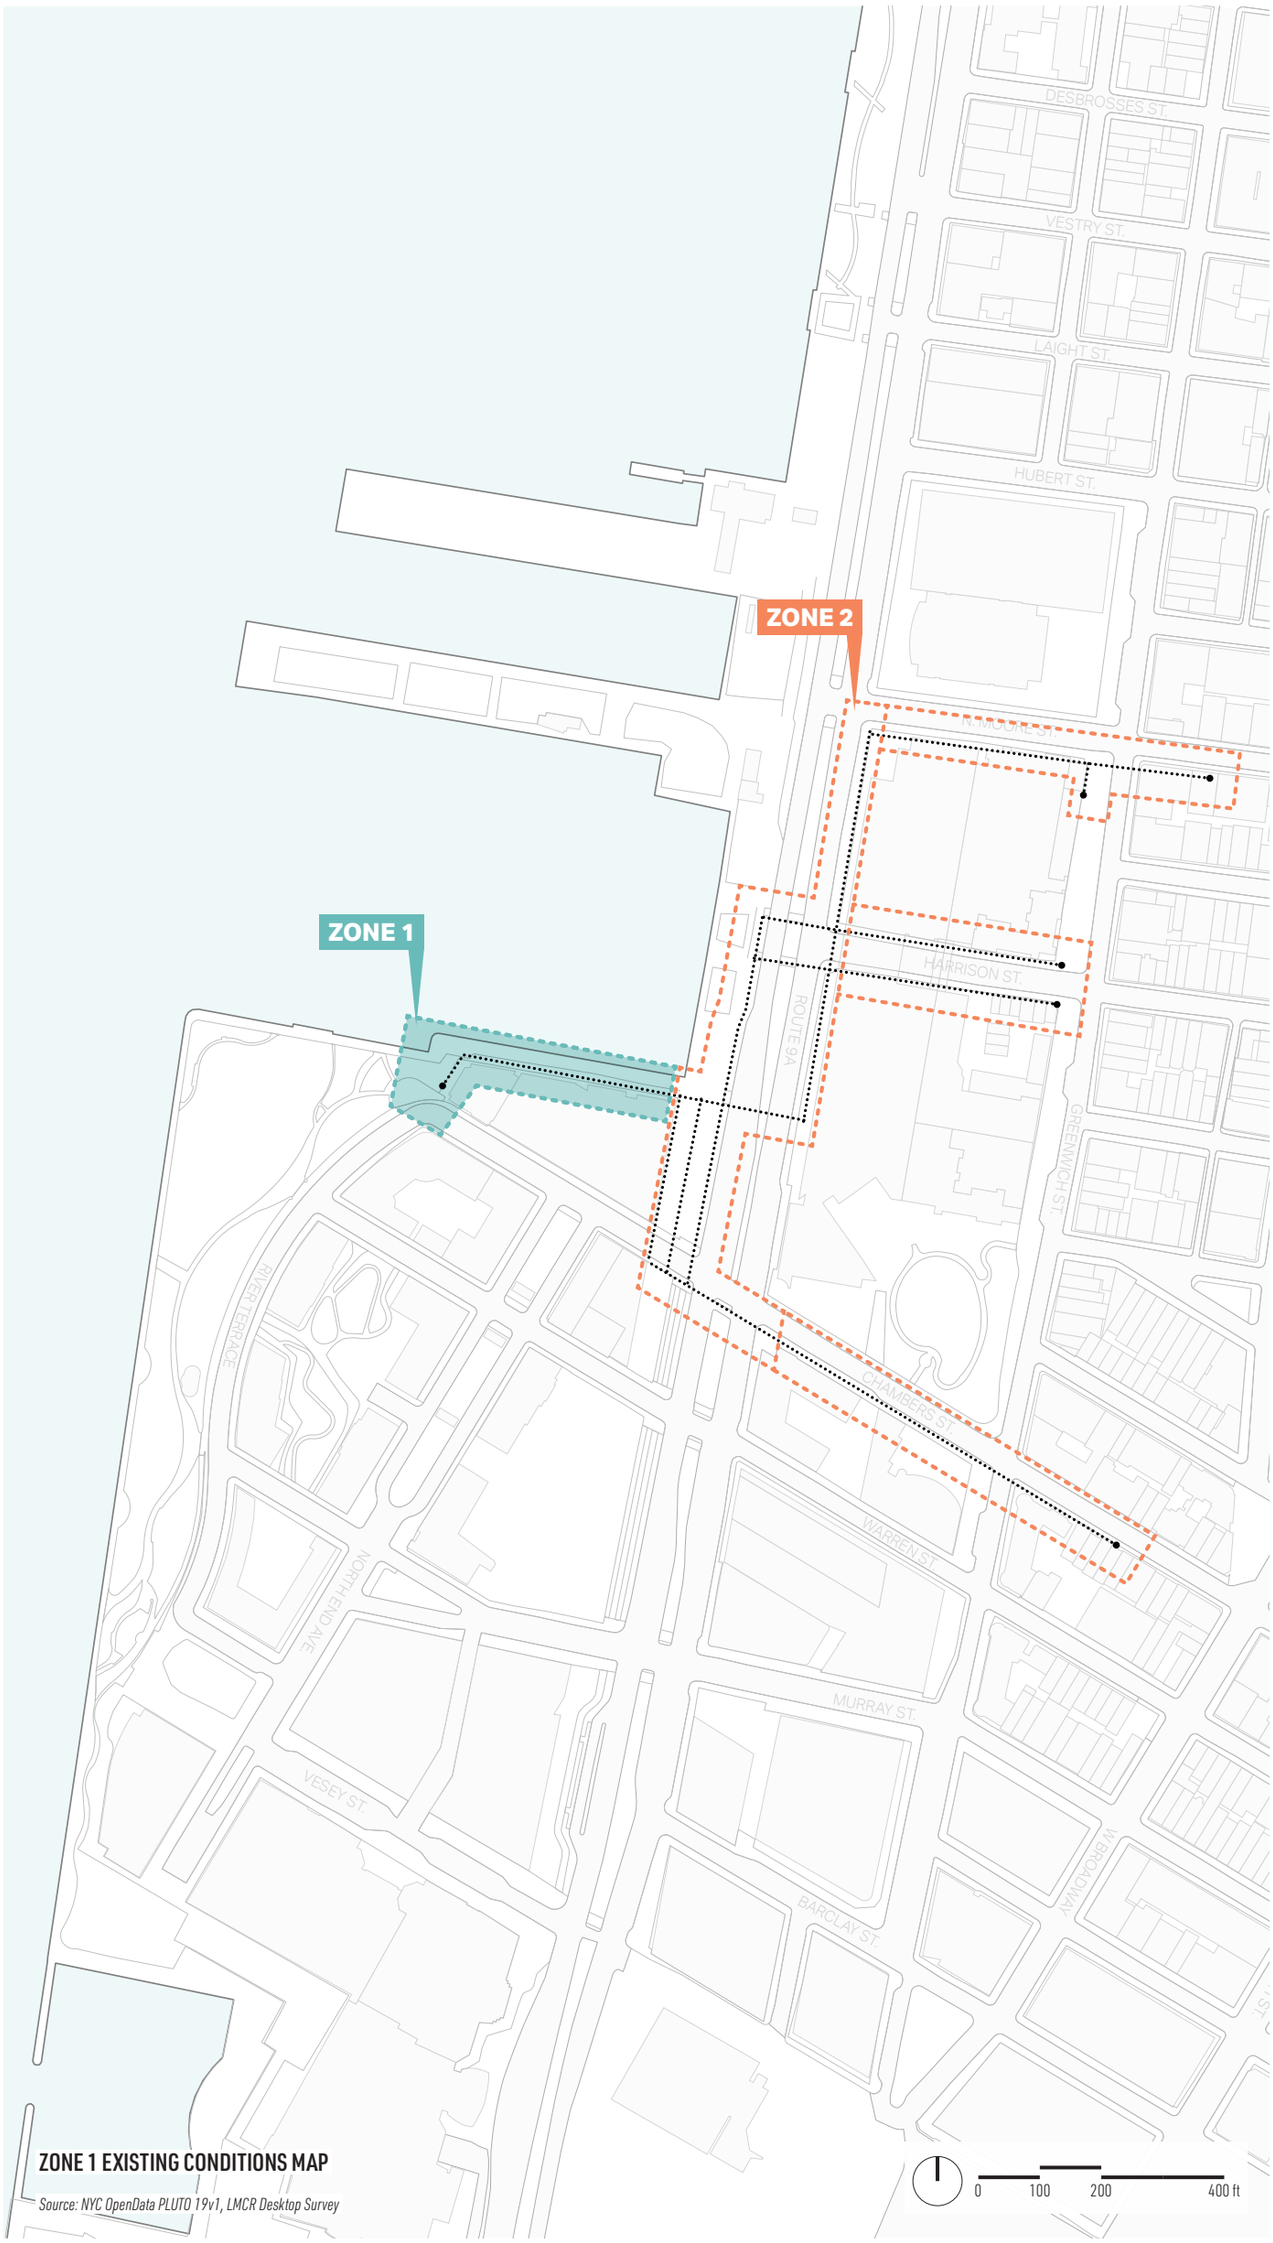


THE RIVER WALK
HYBRID DESIGN
NORTH ESPLANADE PARK

ZONE 1 CHARACTER

The character of Zone 1 is defined by the esplanade and the northern edge of Rockefeller Park. The public realm consists of a park like spaces comprised of standard unit paving, stone, and lush planting areas. The Northern Esplanade provides direct access to Rockefeller Park, the largest open space in Battery Park City

BATTERY PARK CITY

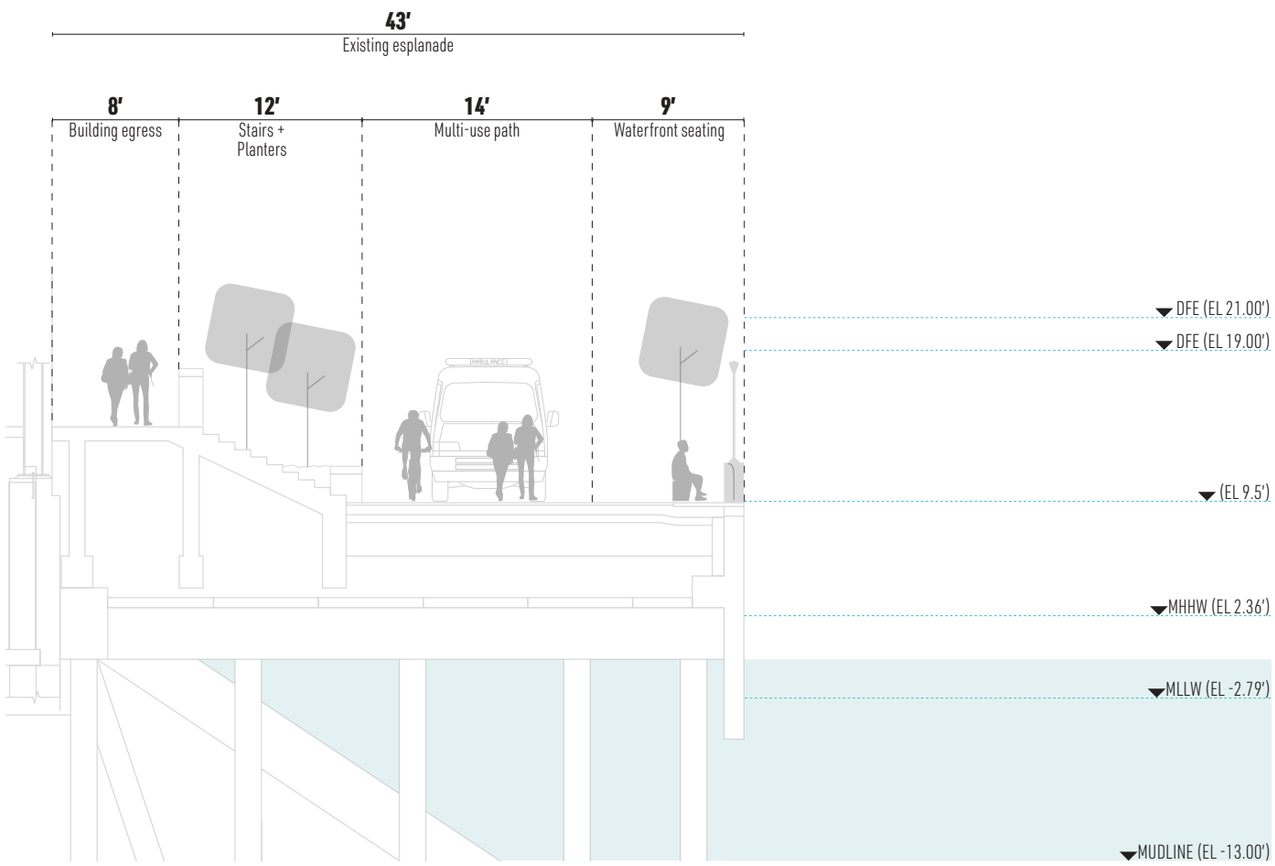


ZONE 1 EXISTING CONDITIONS MAP

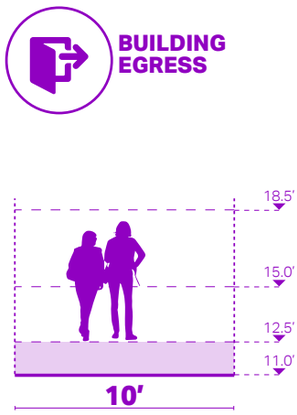
Source: NYC OpenData PLUTO 19v1, LMCR Desktop Survey

DEVELOPING A TOOLKIT

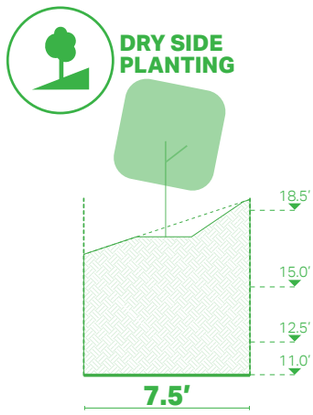
A toolkit of typical esplanade features was developed to understand the minimum spatial requirements for each element. The toolkit is made up of two categories, Esplanade Features and Methods of Protection. Toolkit items in the Esplanade Features category include waterfront seating, multi-use pathways, stairs, ramps, building egress routes and a bike path. These toolkit items were developed based on the dimensions of those features in the existing conditions of the current esplanade design.



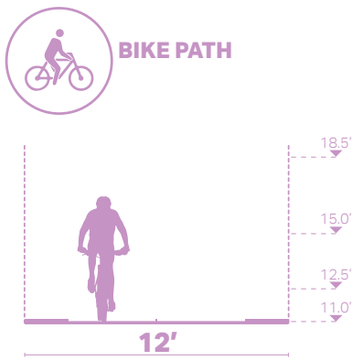
Zone 1 Existing Conditions Section



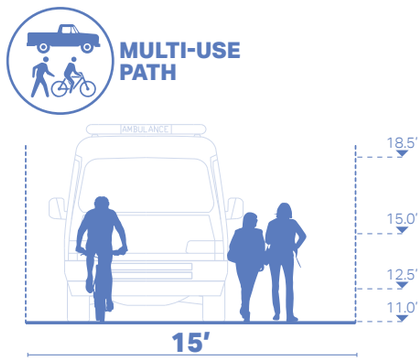
Building egress requirements from Stuyvesant High School.



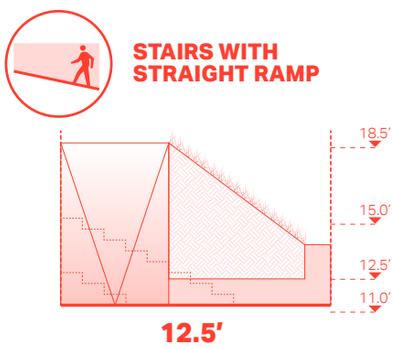
Planting width required to include tree planting and reduce wall height to human scale adjacent to building egress.



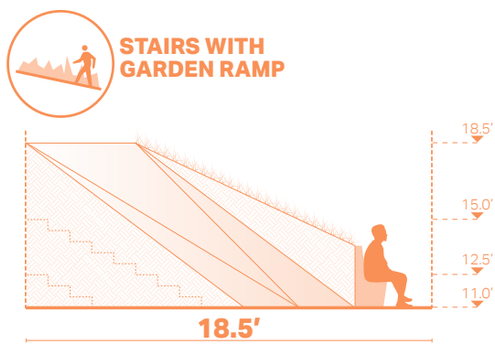
Bike path consists of two 4'-0" bike lanes and a 2' clear buffer on each side of any vertical obstruction.



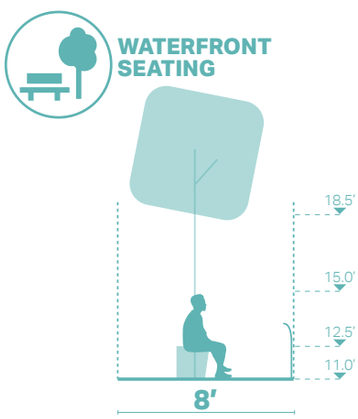
Multi-use path width sufficient for emergency vehicular access and pedestrian circulation.



Width necessary to include ramp parallel to flood infrastructure with sloped planting on water side.



Width necessary to include ramp angled away from flood infrastructure, allowing planting to screen walls on both sides.

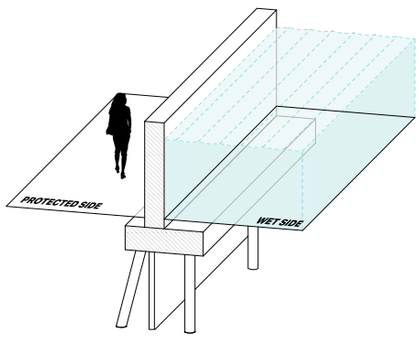


Width to allow for tree planting, seating, and pedestrian movement along waters edge.

DEVELOPING A TOOLKIT

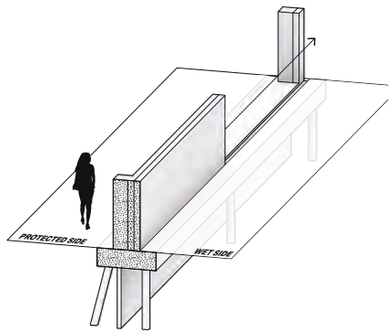
Other toolkit items that correspond more directly to the flood risk reduction alignment infrastructure were developed based on technical requirements of the engineered and designed features. The toolkit items in the Methods of Protection category are the methods f protection themselves, or elements that are necessary to add to the esplanade design to respond to conditions created with the introduction of the method of protection. These features are the method of protection itself including passive and deployable approaches, planting areas on the dry side of the method of protection , and stairs with integrated garden ramp systems to ensure universal access was provided to the full esplanade area after the method of protection is constructed.

PASSIVE TREATMENT



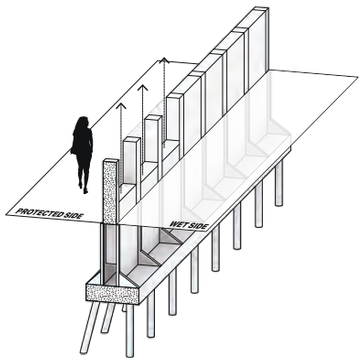
Passive flood infrastructures do not require any moving parts to provide flood risk reduction. The passive nature of the infrastructure elements allows for lower levels of maintenance to ensure function is maintained over time, and less operational requirements prior to a flood event.

ROLLER GATE



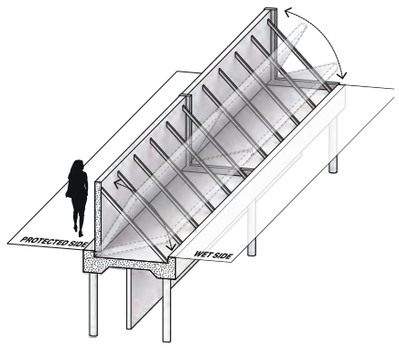
Roller gates are a deployable flood risk reduction infrastructure components often used in combination with passive systems like floodwalls. These gates are stored adjacent to passive system alignments and roll into place across an opening in a passive system alignment prior to a flood event.

VERTICAL DEPLOYABLE



Vertical deployable infrastructure components can be utilized in areas where maintaining visual or physical connections is important but where horizontal spatial constraints don't allow for other deployable systems. Vertical deployable are stored below the finished grade and deployed vertically prior to a flood event.

FLIP-UP GATE



Flip-up gates offer the most opportunity for maintaining visual and physical connections to either side of a flood risk reduction alignment. These types of systems minimize the vertical elements required to provide flood risk reduction. Flip-up gates are stored horizontally within the ground plane and flip up into place prior to a flood event.

TWO APPROACHES

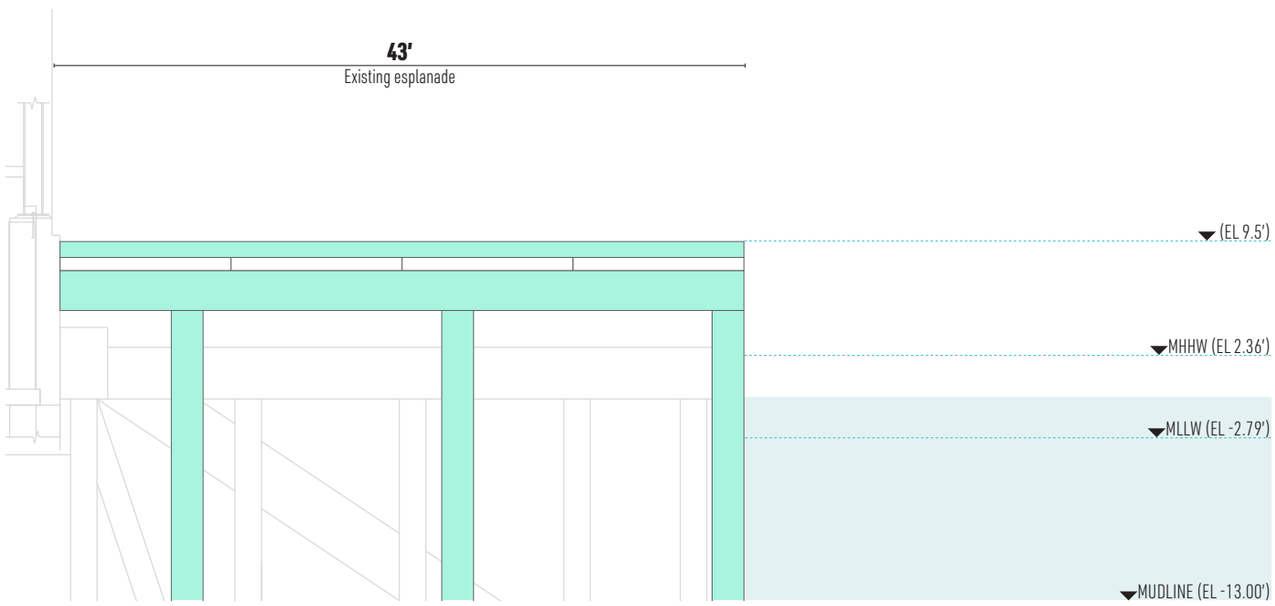
The design team began with two design approaches for the esplanade: “Maintain the Footprint” and “Extend the Footprint”. These offer different constraints and opportunities directly related to the underlying structural approach. Multiple alignments for the method of protection were studied within each design approach, as were multiple design concepts for the spatial qualities of the esplanade design.

MAINTAIN THE FOOTPRINT

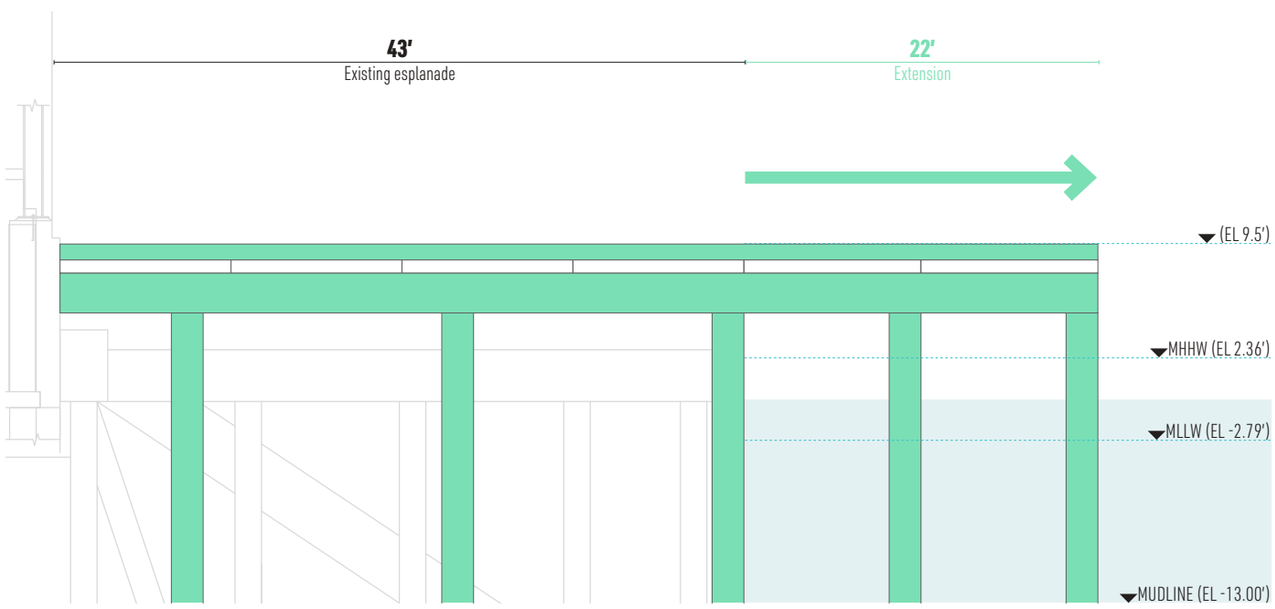
This suite of design studies do not impact the existing bulkhead line. Flood risk reduction infrastructure is integrated into the existing esplanade width. Maintaining the footprint limits permitting implications associated with impacts to the marine environment.

EXTEND THE FOOTPRINT

This suite of design studies increases the width of the platform. These studies offer more opportunity to integrate universal accessibility without limiting planting area, but have permitting impacts that pose a serious challenge.



MAINTAIN THE FOOTPRINT

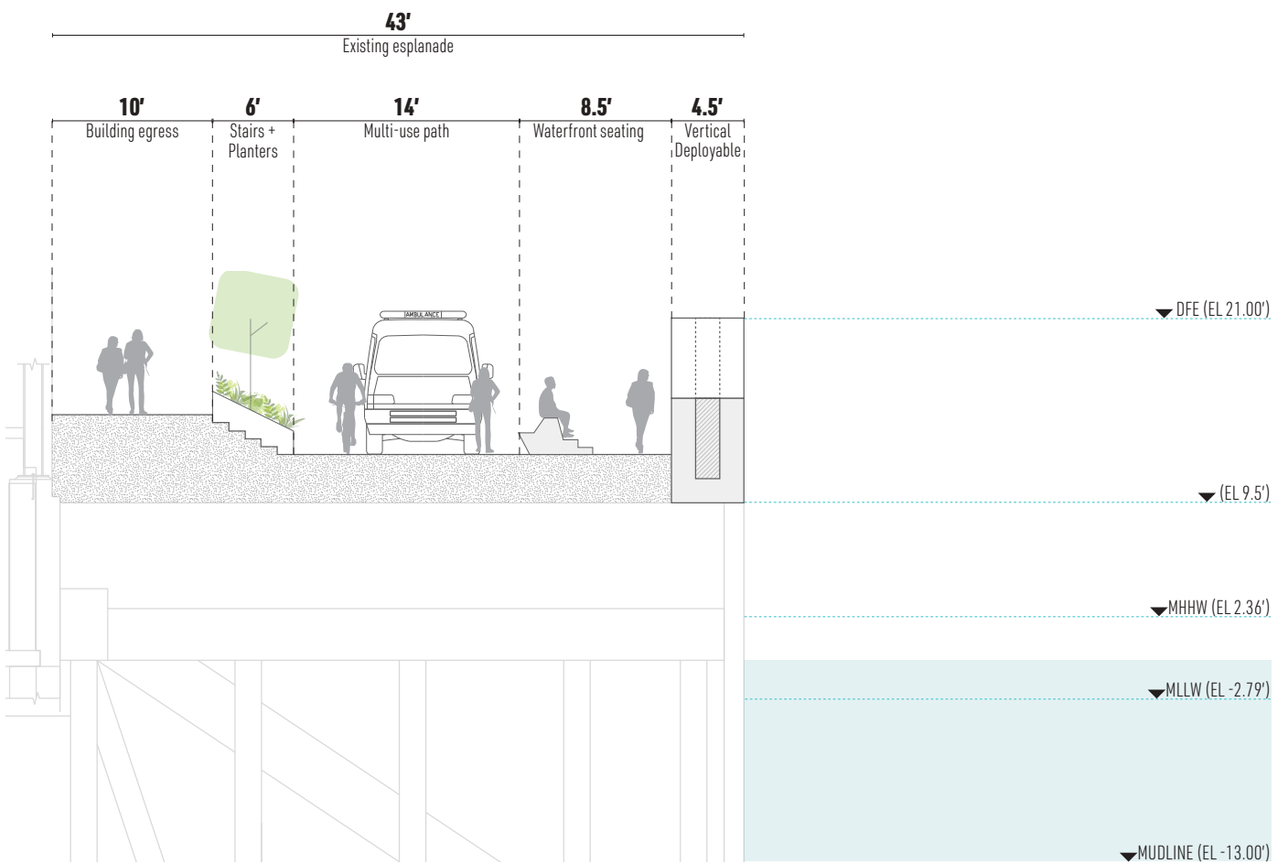


EXTEND THE FOOTPRINT

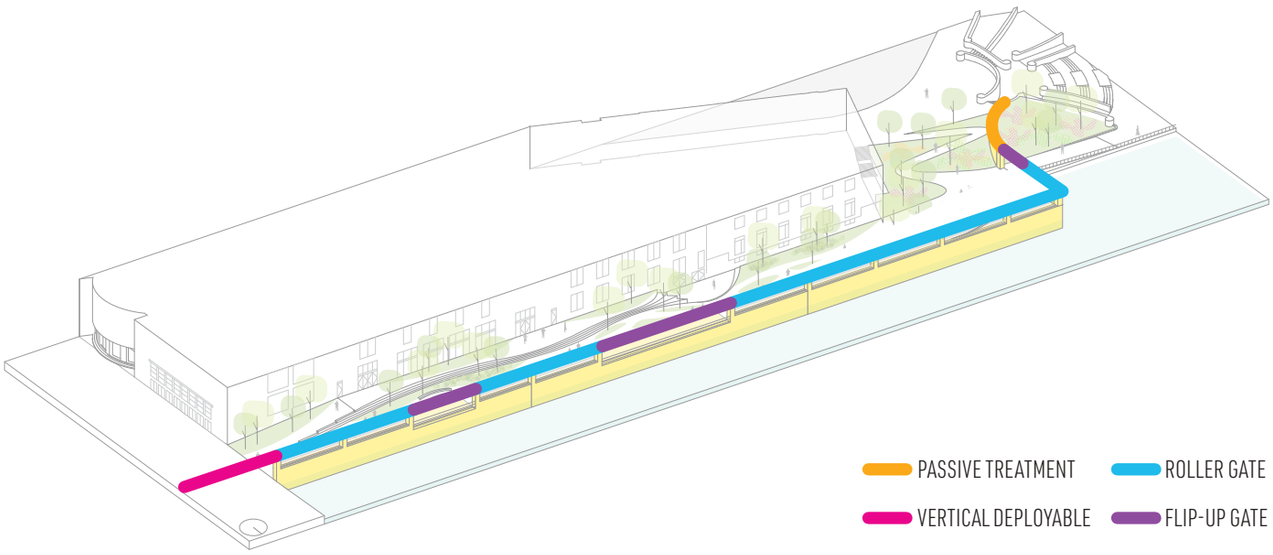
STUDY 01

RAISED ESPLANADE

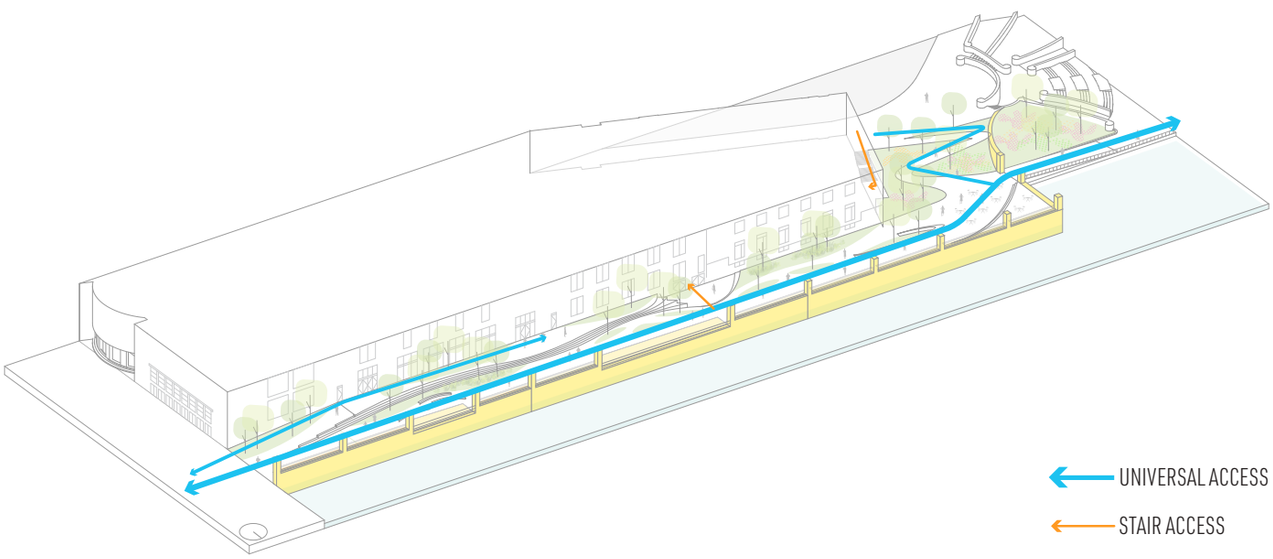
This study shows implications of raising the esplanade while maintaining the footprint of the esplanade. The raised esplanade design strategy sets the method of protection alignment at the edge of the existing bulkhead, using a combination of passive and deployable systems. Raising the esplanade minimizes the height of passive flood protection measures while simultaneously reducing the risk of nuisance flooding in the future. Low, passive flood walls at the bulkhead act as a pedestrian parapet and are combined with vertical deployable systems that raise during a storm event to meet the required DFE. Deployable flip-up gates are used to maintain critical view corridors. Existing esplanade uses are maintained and enhanced where feasible. Seating and small areas of native plantings are sprinkled along the multi-use path of the esplanade. Systems of stairs and ramps are utilized along the southern edge of the esplanade to maintain access to the existing egress routes from Stuyvesant School. A sloped walkway through native gardens provides access up to the Chambers Street sidewalk at the western end of the esplanade and Tribeca Point.



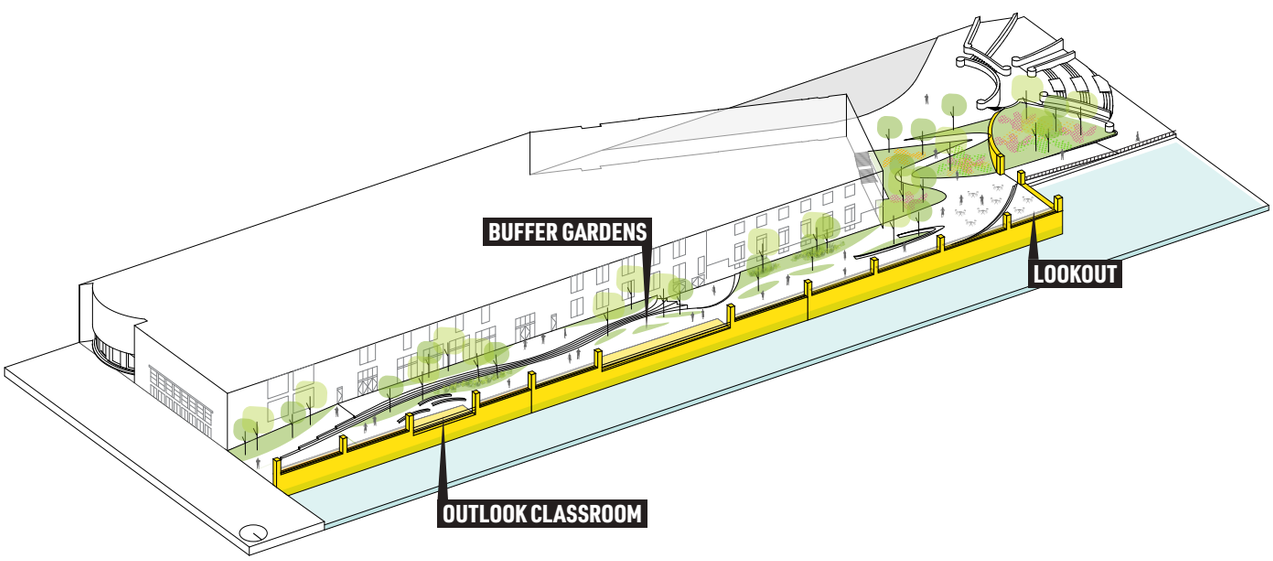
Raised Esplanade Section



Flood Mitigation Methods



Circulation



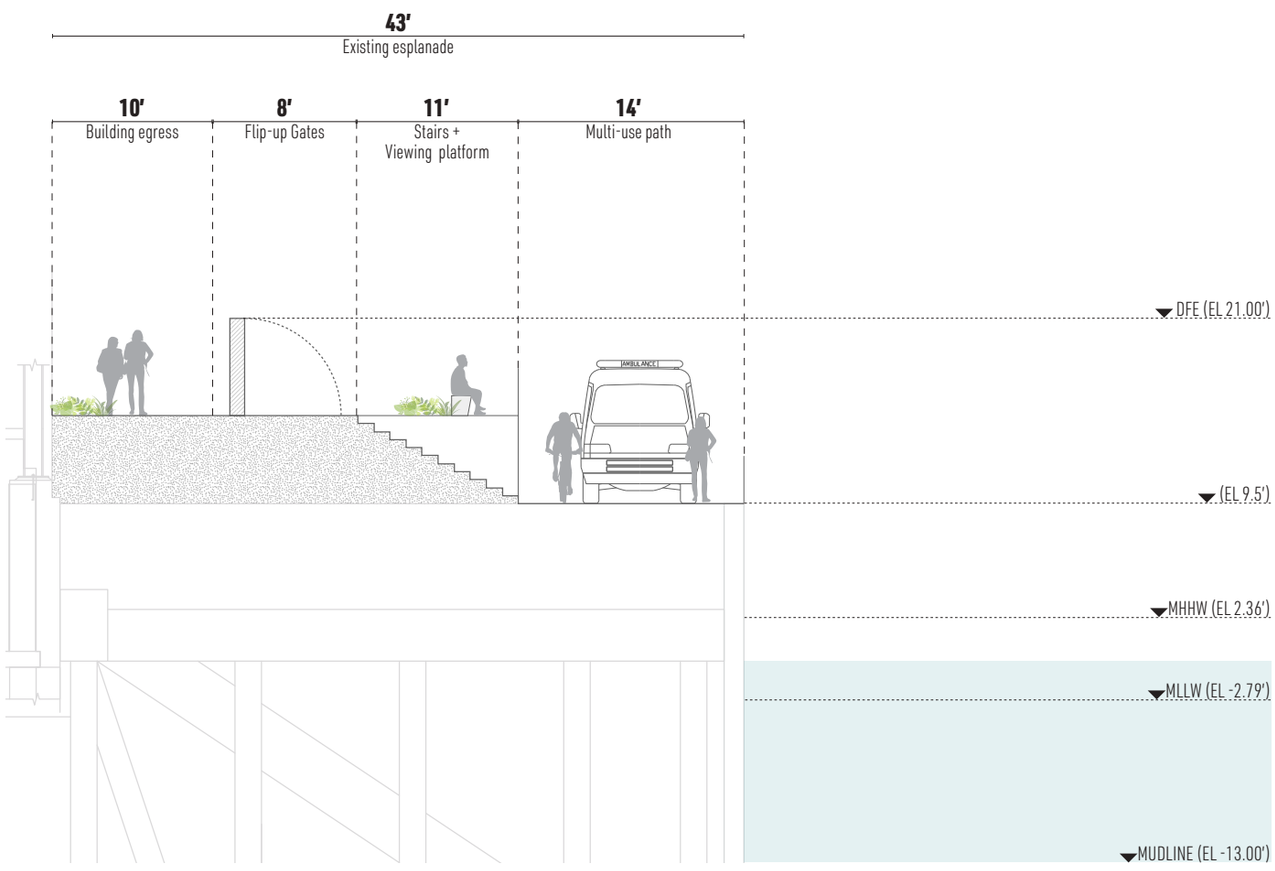
Design Concept

STUDY 02

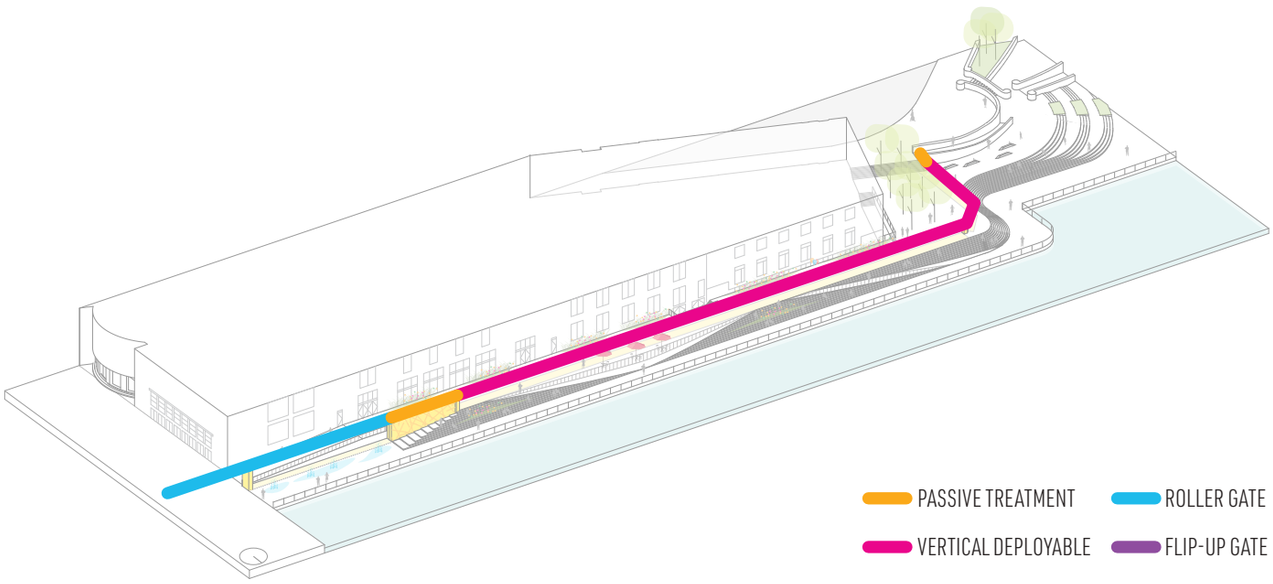
RIVER THEATER

This study shows implications of setting the method of protection in the center of the esplanade, while maintaining the footprint. The method of protection consists of a combination of deployable systems. The elevation of the northern half of the esplanade immediately adjacent to the waters edge is maintained while the southern half is raised to minimize the required height of flip up gates and to facilitate access to the existing egress routes from the school. The extensive use of flip up deployables prioritizes pedestrian access and views to the waterfront by eliminating fixed barriers.

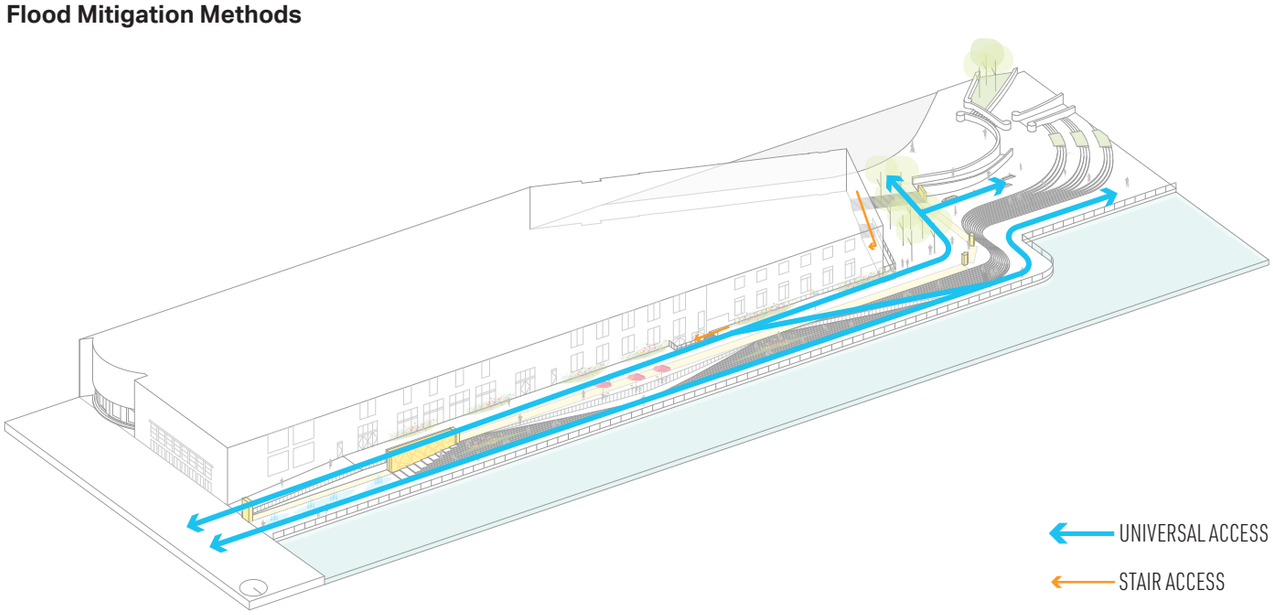
The change in elevation at the center of the esplanade creates an amphitheater-like experience providing ample seating opportunities to take in waterfront views and integrate systems of stairs and ramps to provide ADA access to the various levels. Offsets required for operation and maintenance of the deployable flood infrastructure components result in minimal planting opportunity. More hardscape creates space for an interactive water plaza at the eastern entrance to the esplanade.



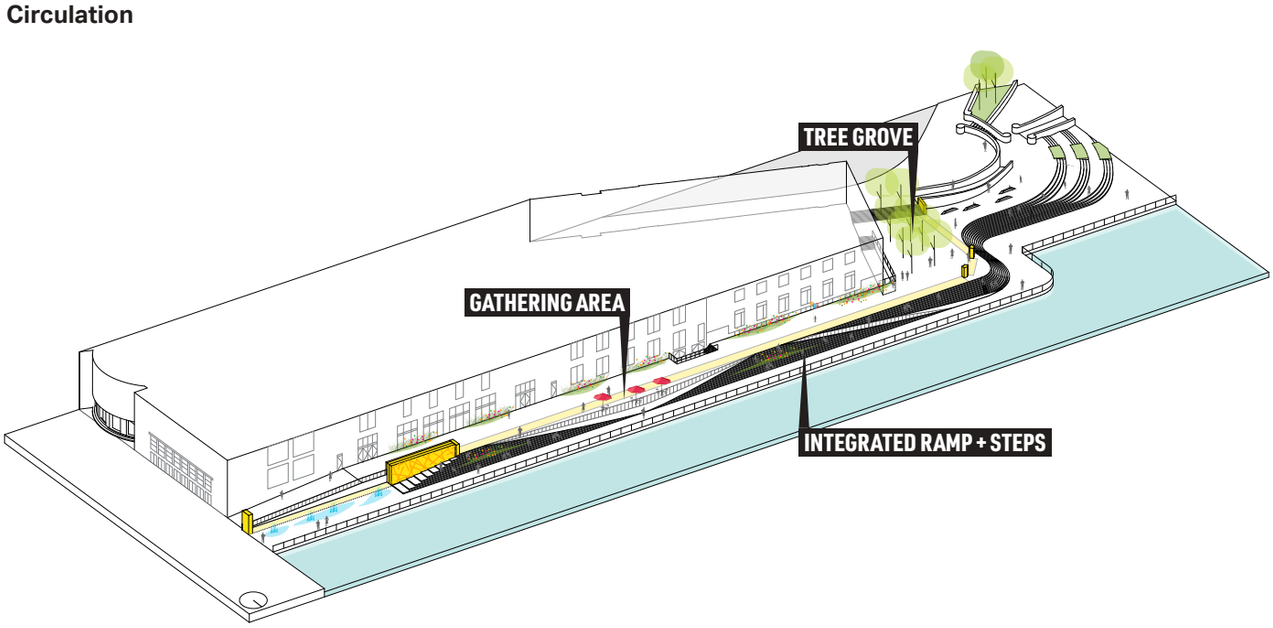
River Theater Section



Flood Mitigation Methods



Circulation



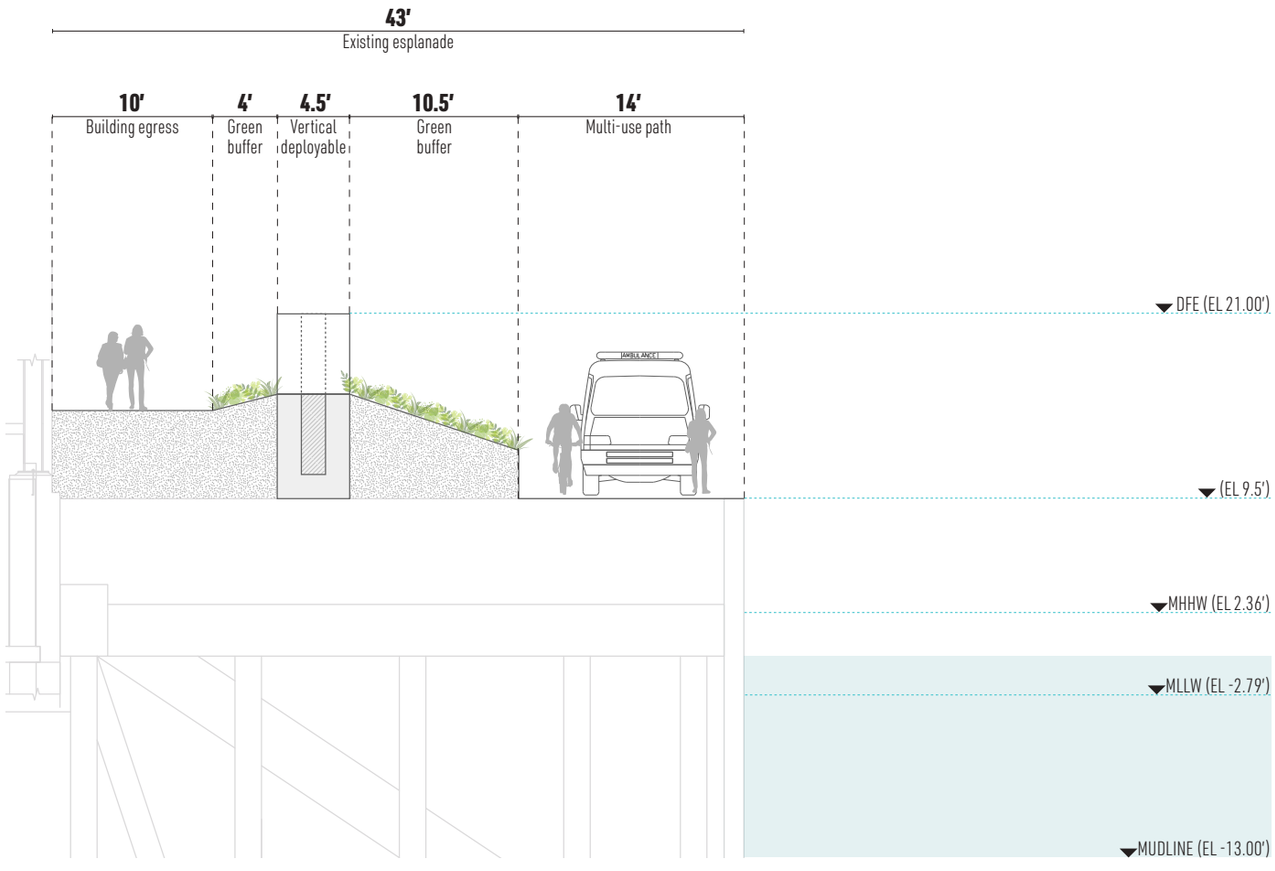
Design Concept

STUDY 03

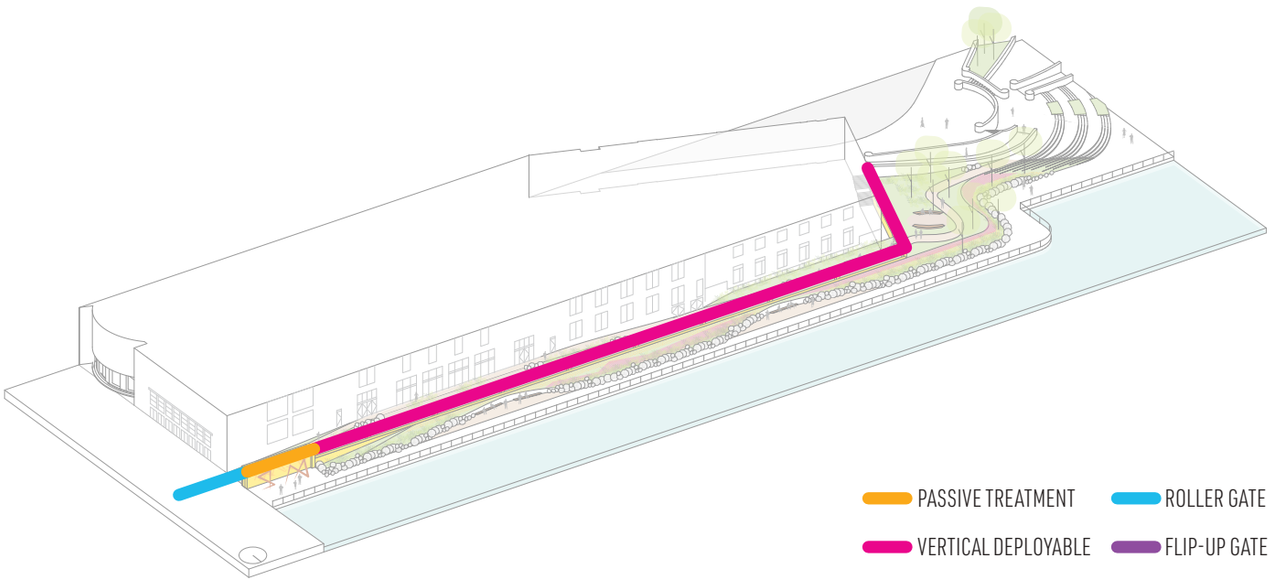
WATERFRONT RIDGE

This study shows implications of setting the method of protection in the center of the esplanade, while maintaining the footprint and concealing much of the infrastructure. The method of protection consists of primarily fixed systems with deployables use where access is required. The elevation of the northern half of the esplanade immediately adjacent to the waters edge is maintained while the southern half is raised to minimize the required height of the vertical deployables and to conceal flood infrastructure with landform. Egress routes to the existing school entrances are maintained on an upper pathway.

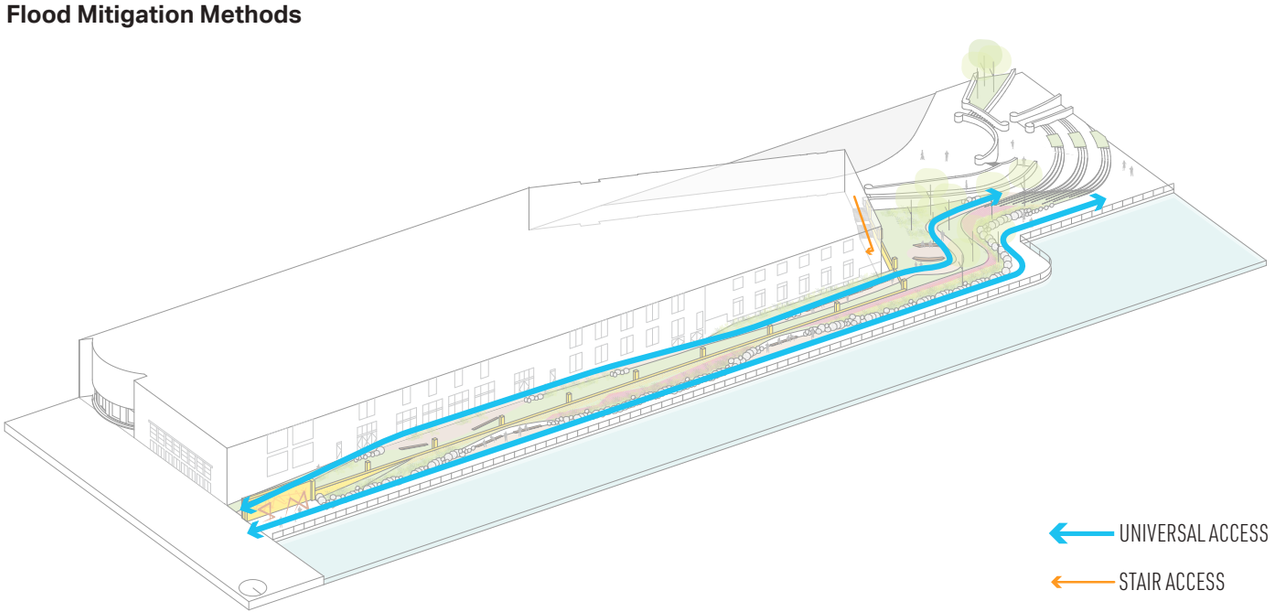
Landforms are used to conceal the fixed infrastructure from view, creating an extensive planting feature along the full length of the esplanade. The "waterfront ridge" has a more natural feel than the other concepts with ample native plantings and natural materials such as boulders to create small pockets carved from the landform at strategic locations to provide additional seating opportunities. A multi-use pathway along the rivers edge is maintained, and a ridge walk trail weaves through the planting area at the higher elevation to the south.



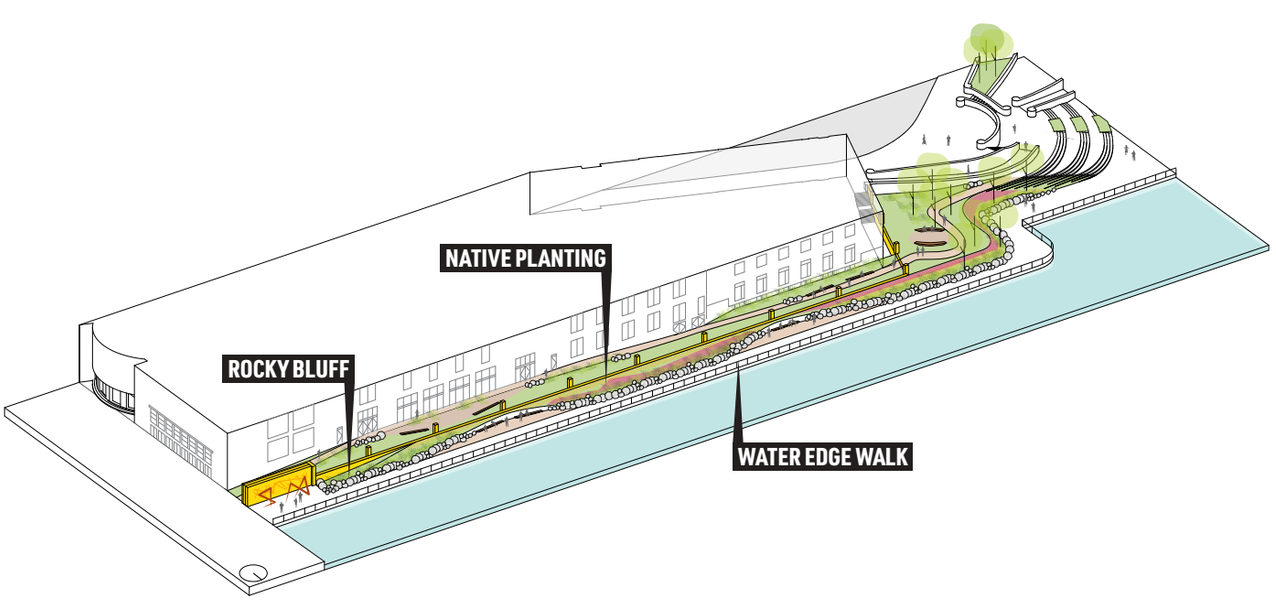
Waterfront Ridge Section



Flood Mitigation Methods



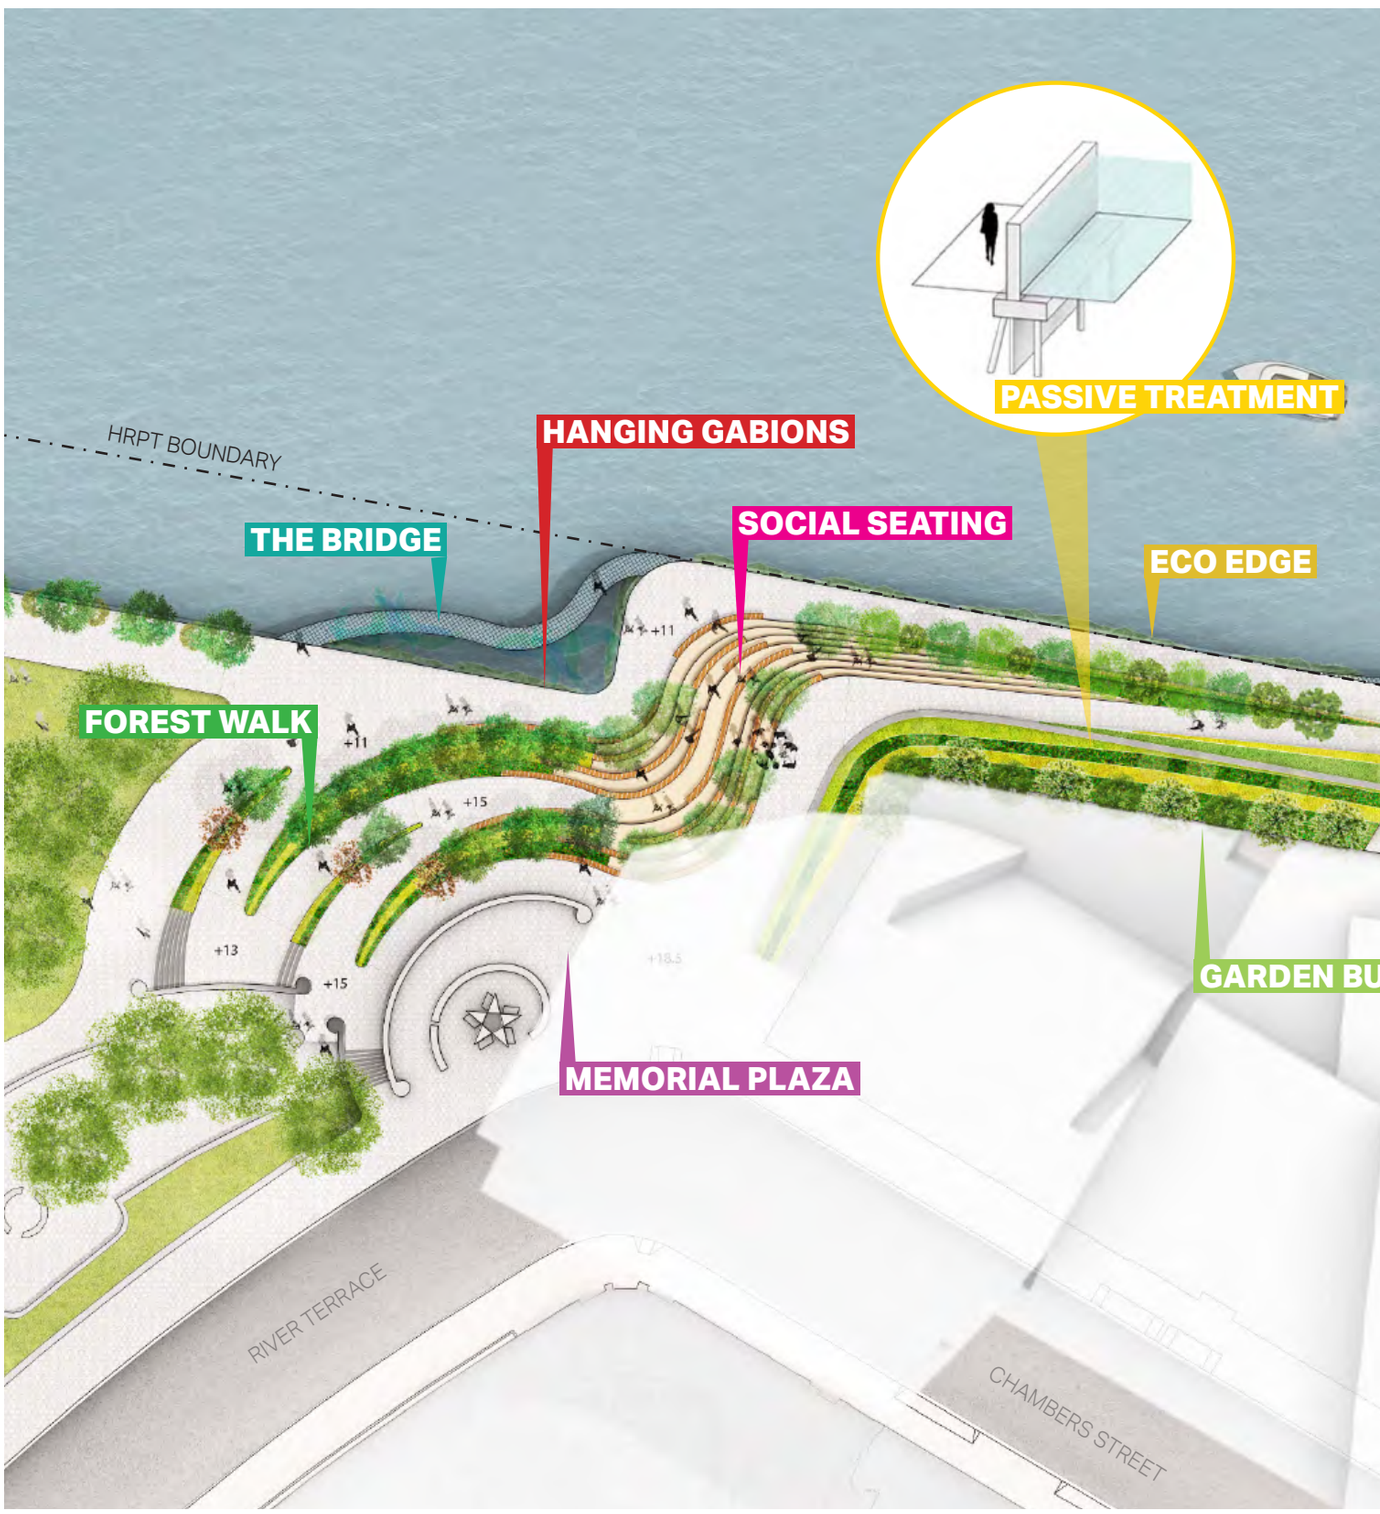
Circulation



Design Concept

MAINTAIN THE FOOTPRINT: HYBRID DESIGN

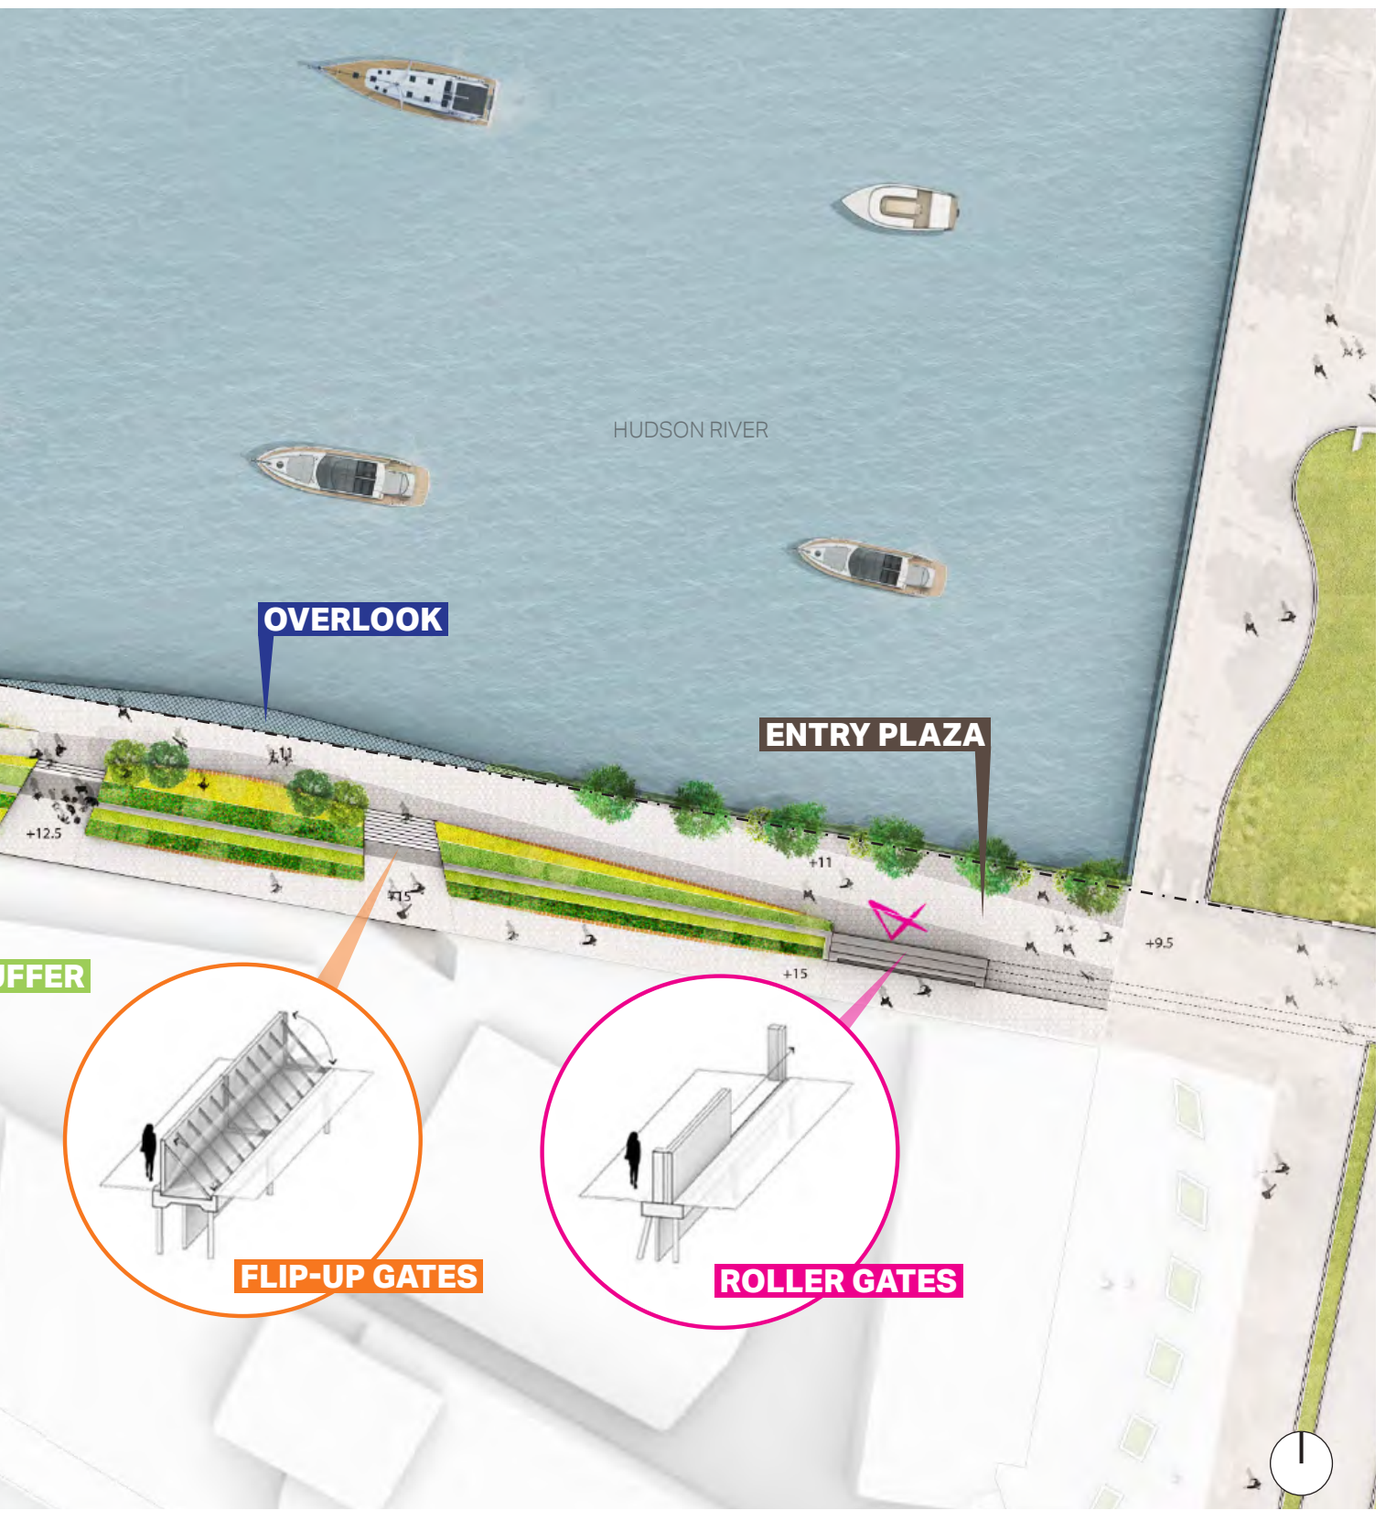
RIVER WALK



River Walk Illustrative Site Plan

The River Walk design strategy pulls the most successful aspects of the prior three design studies and combines them into a hybrid preferred direction for the "Maintain the Footprint" design approach. This concept sets the method of protection alignment towards the center of the esplanade section and prioritizes a passive method of protection. Deployable rolling and flip up flood gate elements are used at strategic locations for required access and integration with adjacent conditions.

The esplanade footprint is maintained, but an overlook and cantilevered walkway are added to provide opportunity to interact with the river. This concept was refined using feedback from community members and stakeholders who provided input on the alignment, circulation, and program options. Adding green space is a priority of the design, and circulation routes are woven between a series of native garden spaces. A river amphitheater element increases the opportunities for waterfront seating and is located at a strategic location to take in the best waterfront views and sunsets to the west.



Amphitheater seating set among terraced gardens take advantage of river views

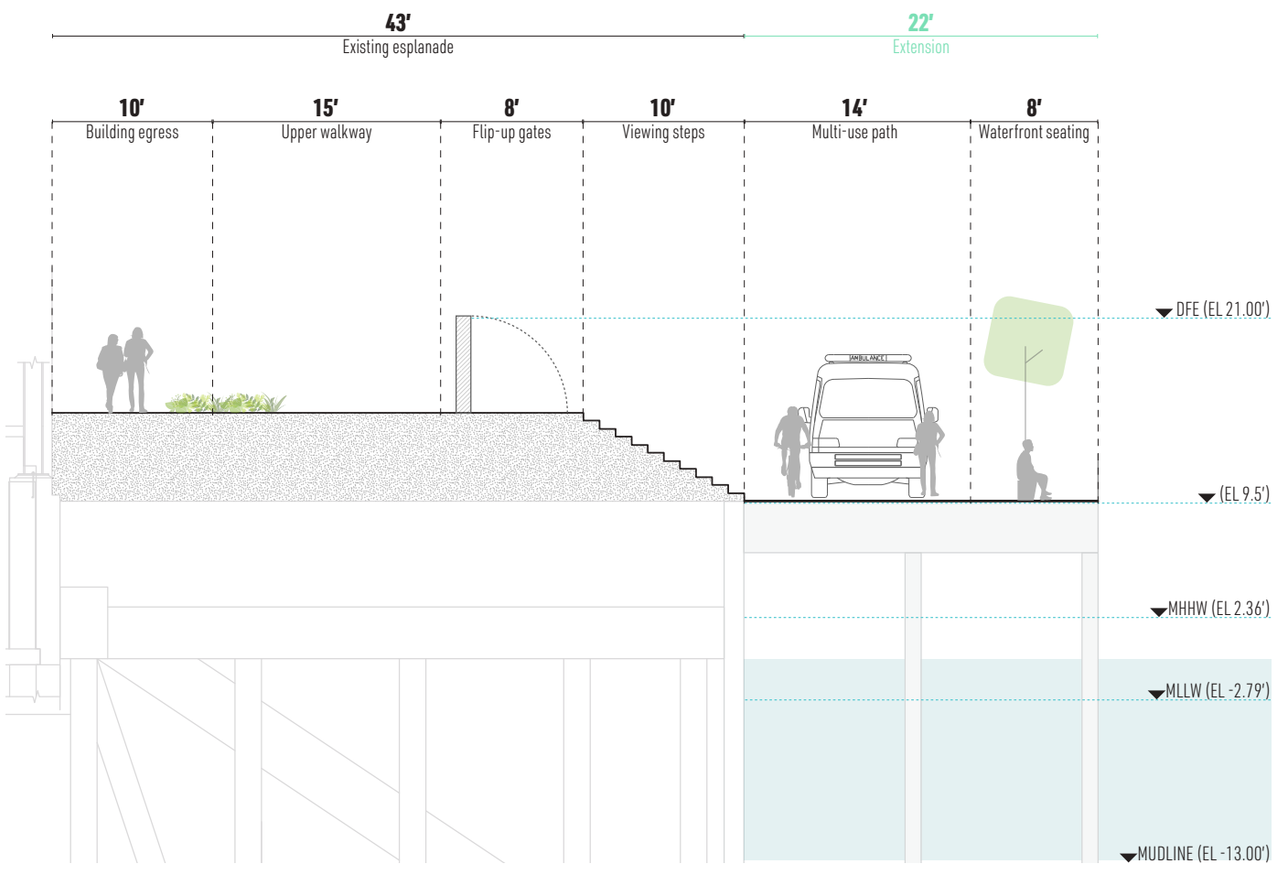
River Walk Esplanade View

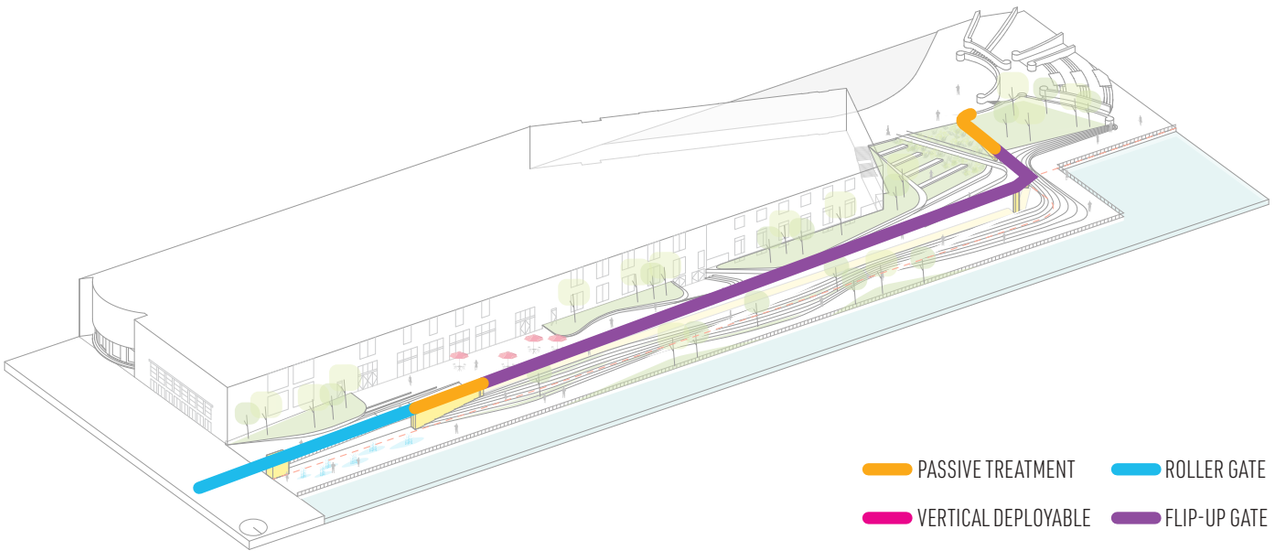
STUDY 04

RAISED ESPLANADE

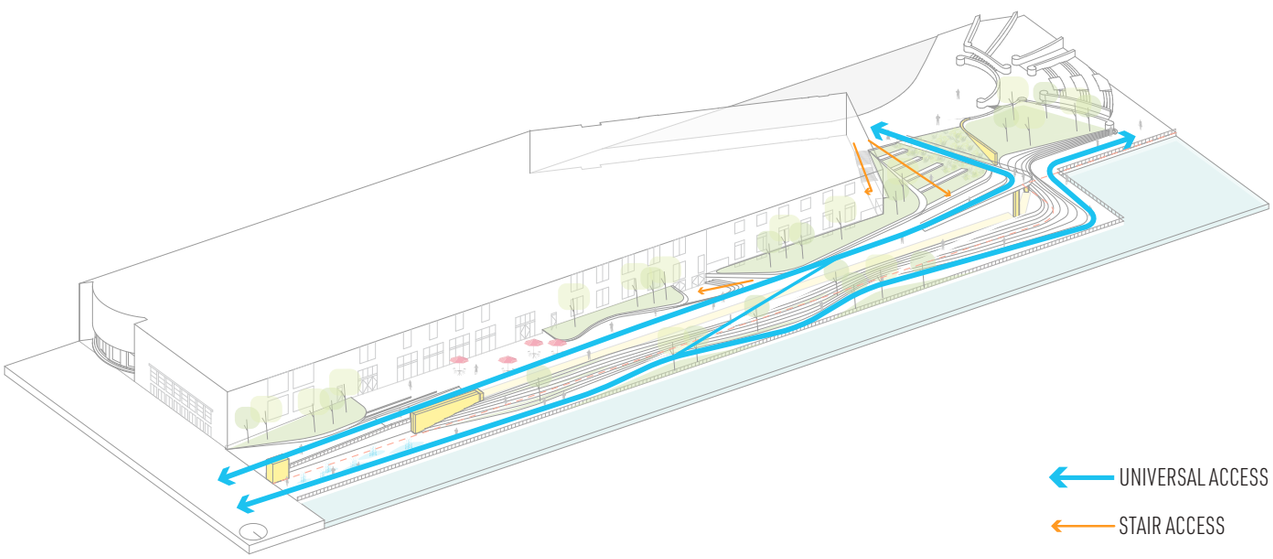
This study shows implications of raising the esplanade while extending the footprint of the esplanade. The Raised Esplanade design strategy sets the method of protection alignment along the existing bulkhead and extends the footprint another 22' to the north so the alignment is located more towards the center of the esplanade. The method of protection utilized a combination of passive and deployable systems. The elevation of the extended portion of the esplanade immediately adjacent to the waters edge maintains the elevation of the existing esplanade, while the southern portion is raised to minimize the required height of flip up gates and to provide egress from the school. Pedestrian movement is prioritized, resulting in the extensive use of flip-up deployable gates. The extension of the footprint gives enough space for steps,ramps, seating, and planters along the full length of the esplanade. Plaza areas on the raised portion of the esplanade maintain egress routes to the school and provide areas for outdoor classroom or hangout space. A pedestrian bridge connects the pedestrian plaza at the entrance to Tribeca Point at Chambers Street to the raised portion of the esplanade providing a unique experience as pedestrians to view the sloped native gardens below the pathway.



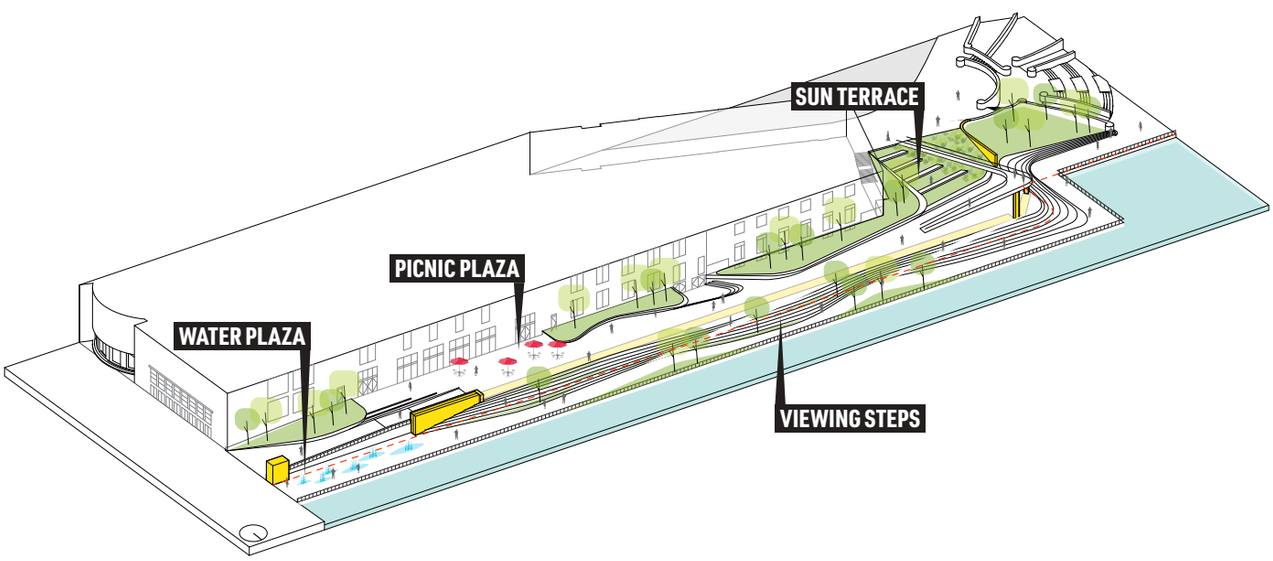
Raised Esplanade Section



Flood Mitigation Methods



Circulation



Design Concept

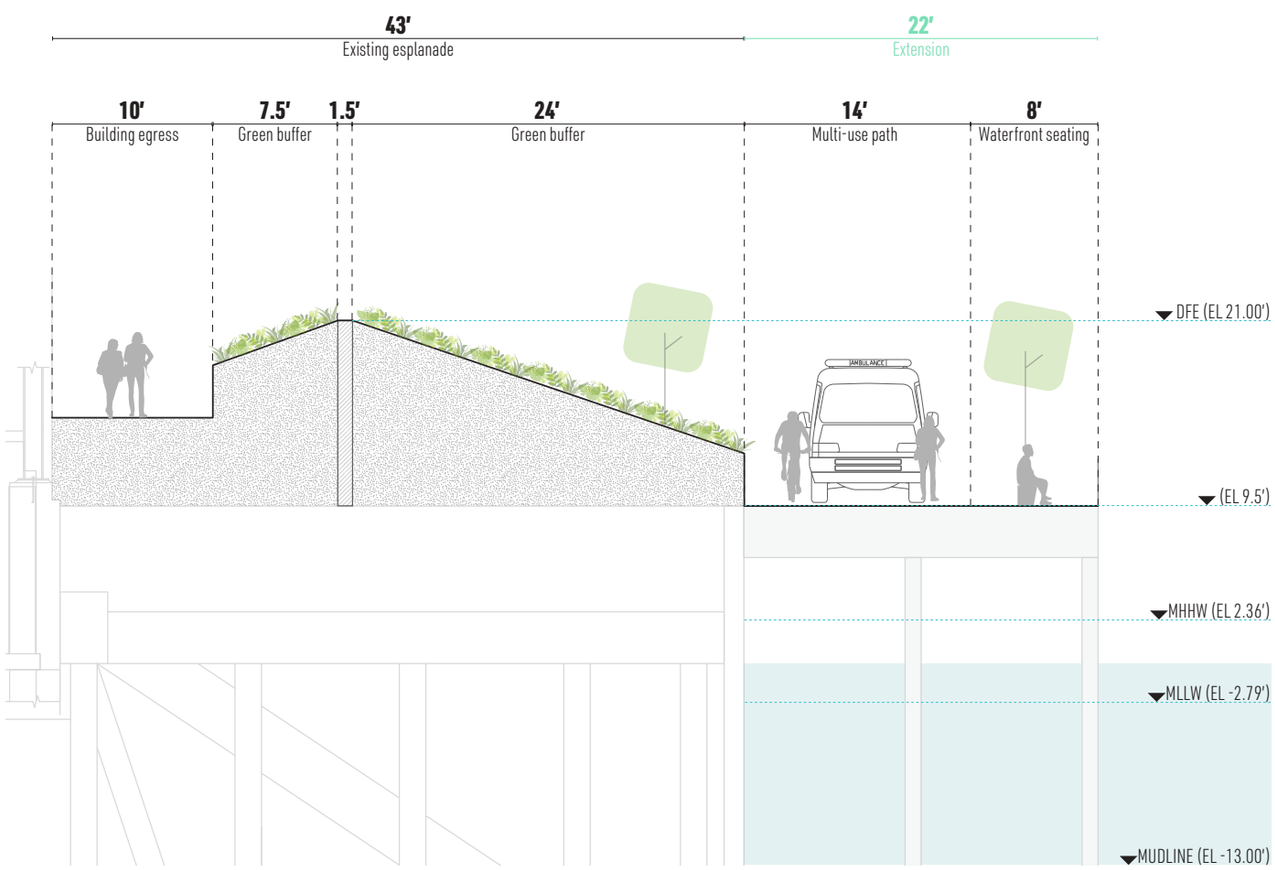
EXTEND THE FOOTPRINT

STUDY 05

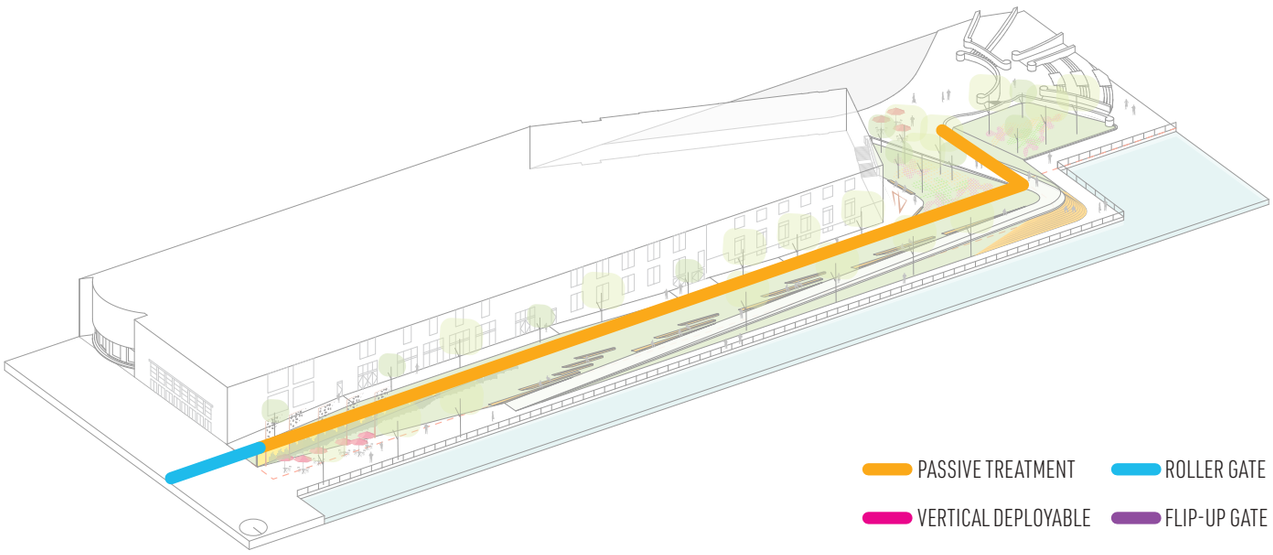
RIVER THEATER

This study shows implications of setting the method of protection in the center of the esplanade, while extending the footprint. The method of protection utilized a fully passive system to greatly reduce the preparation required before a storm event.

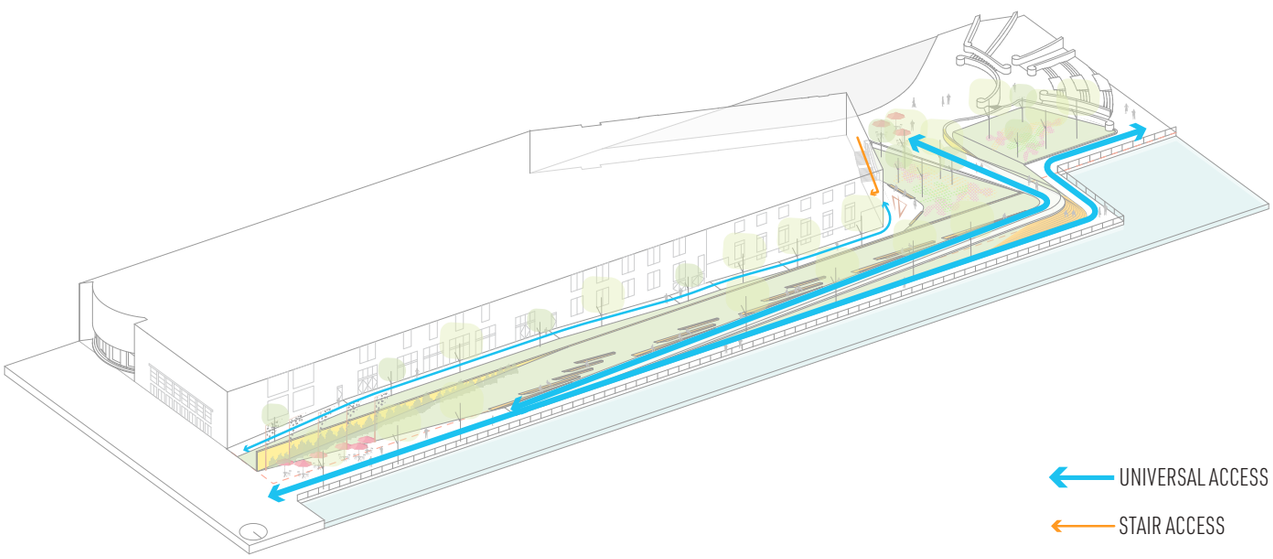
The extra space gained by extending the footprint allows landform to conceal much of the passive floodwall for the full length of the esplanade. To navigate grade changes at the eastern end of the esplanade, the passive floodwall much be visible, and is utilized as an opportunity to create an entry plaza with a mural wall, seating, and feature lighting. In this study, native planting is prioritized and the majority of the existing esplanade is transformed into a planted embankment. An amphitheater is located at the western end of the esplanade, and a sloped pathway navigates the change in grade from the plaza at Tribeca point down to the esplanade elevation on it's eastern end. Seating pockets are integrated into the planted mound along this sloped walkway.



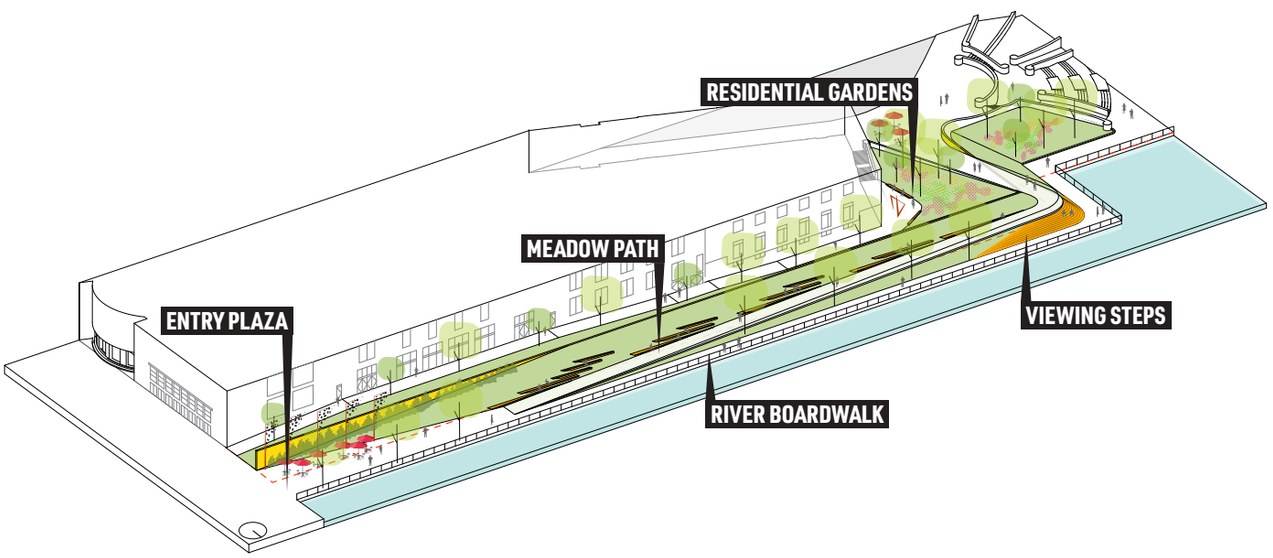
River Theater Section



Flood Mitigation Methods



Circulation



Design Concept

STUDY 06

WATERFRONT RIDGE

This study shows implications of setting the method of protection in the center of the esplanade, while extending the footprint, concealing much of the infrastructure, and introducing floating walkways and a green edge to the existing bulkhead. The method of protection utilizes a fully passive system to greatly reduce the preparation required before a storm event. The floating walkways and naturalized river edge provide wave attenuation.

The extension of the footprint through floating walkways allows for the use of landform to conceal much of the passive floodwall for the full length of the esplanade. To navigate grade changes at the eastern end of the esplanade, the passive floodwall much be visible, and is utilized as an opportunity to create an entry plaza at this point with opportunity for public art and sculpture. The central landform feature covers much of the available existing esplanade section and is planted with native plant communities and has integrated seating areas and experiential trail networks along it's length.

The floating walkways provide a unique experience and an opportunity to physically connect with the water while a green natural edge to the riverbank is envisioned behind the wave attenuating floating features.

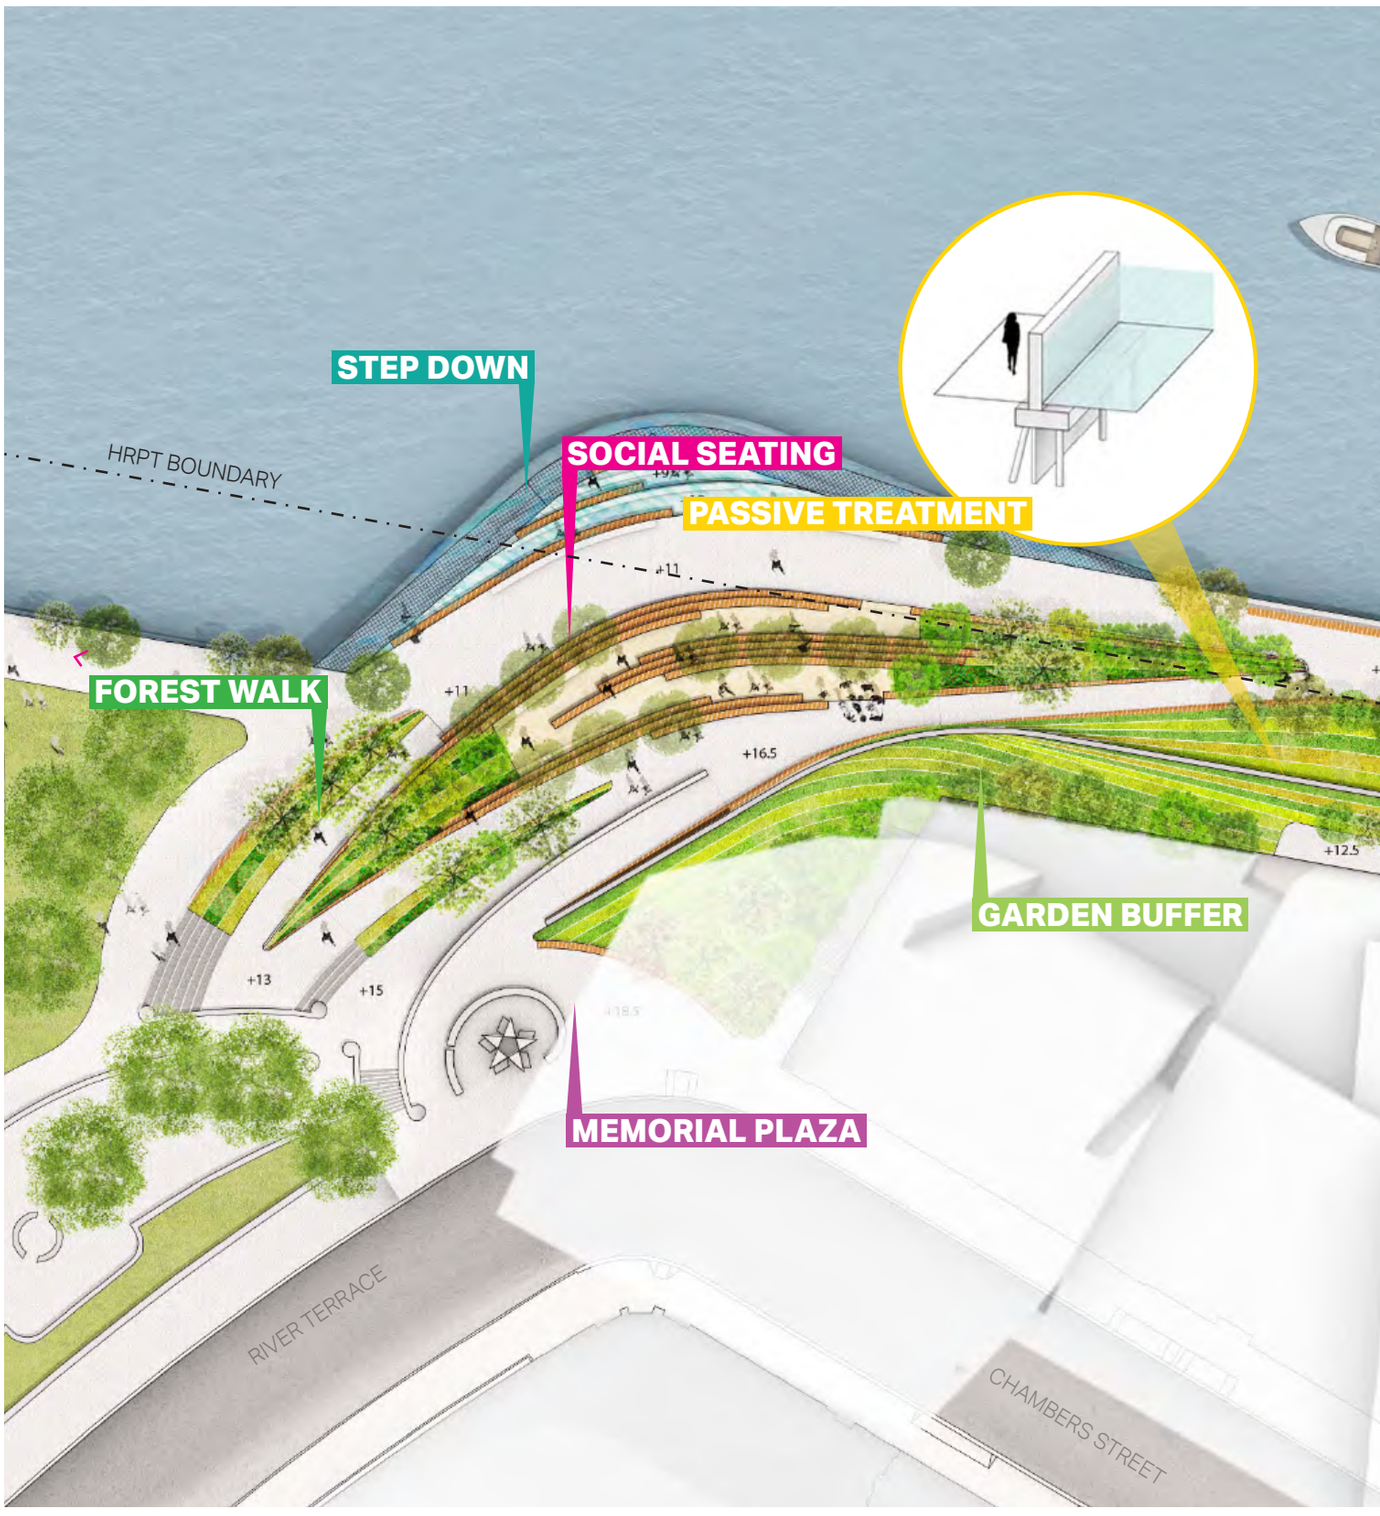
HYBRID OPTION

NORTH ESPLANADE PARK



North Esplanade Park Illustrative Site Plan

The North Esplanade Park design strategy pulls the most successful aspects of the prior three design concepts and combines them into a hybrid preferred direction for the "Extend the Footprint" design approach. This concept sets the method of protection alignment towards the center of the existing esplanade footprint and prioritizes a passive method of protection. Deployable rolling and flip up flood gate elements are used at minimal strategic locations to help facilitate required access and integration with existing conditions.

The esplanade footprint is extended, allowing for the addition of overlook and cantilevered walkway are added at two locations to provide greater opportunities to interact with the river. Adding green space is a priority of the design, and circulation routes are woven between a series of native garden spaces and seating areas. A river amphitheater element increases the opportunities for waterfront seating and is located at a strategic location to take in the best waterfront views and sunsets to the west.

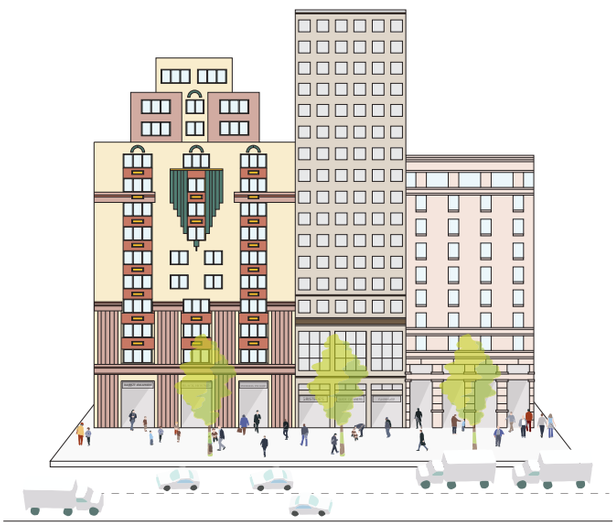
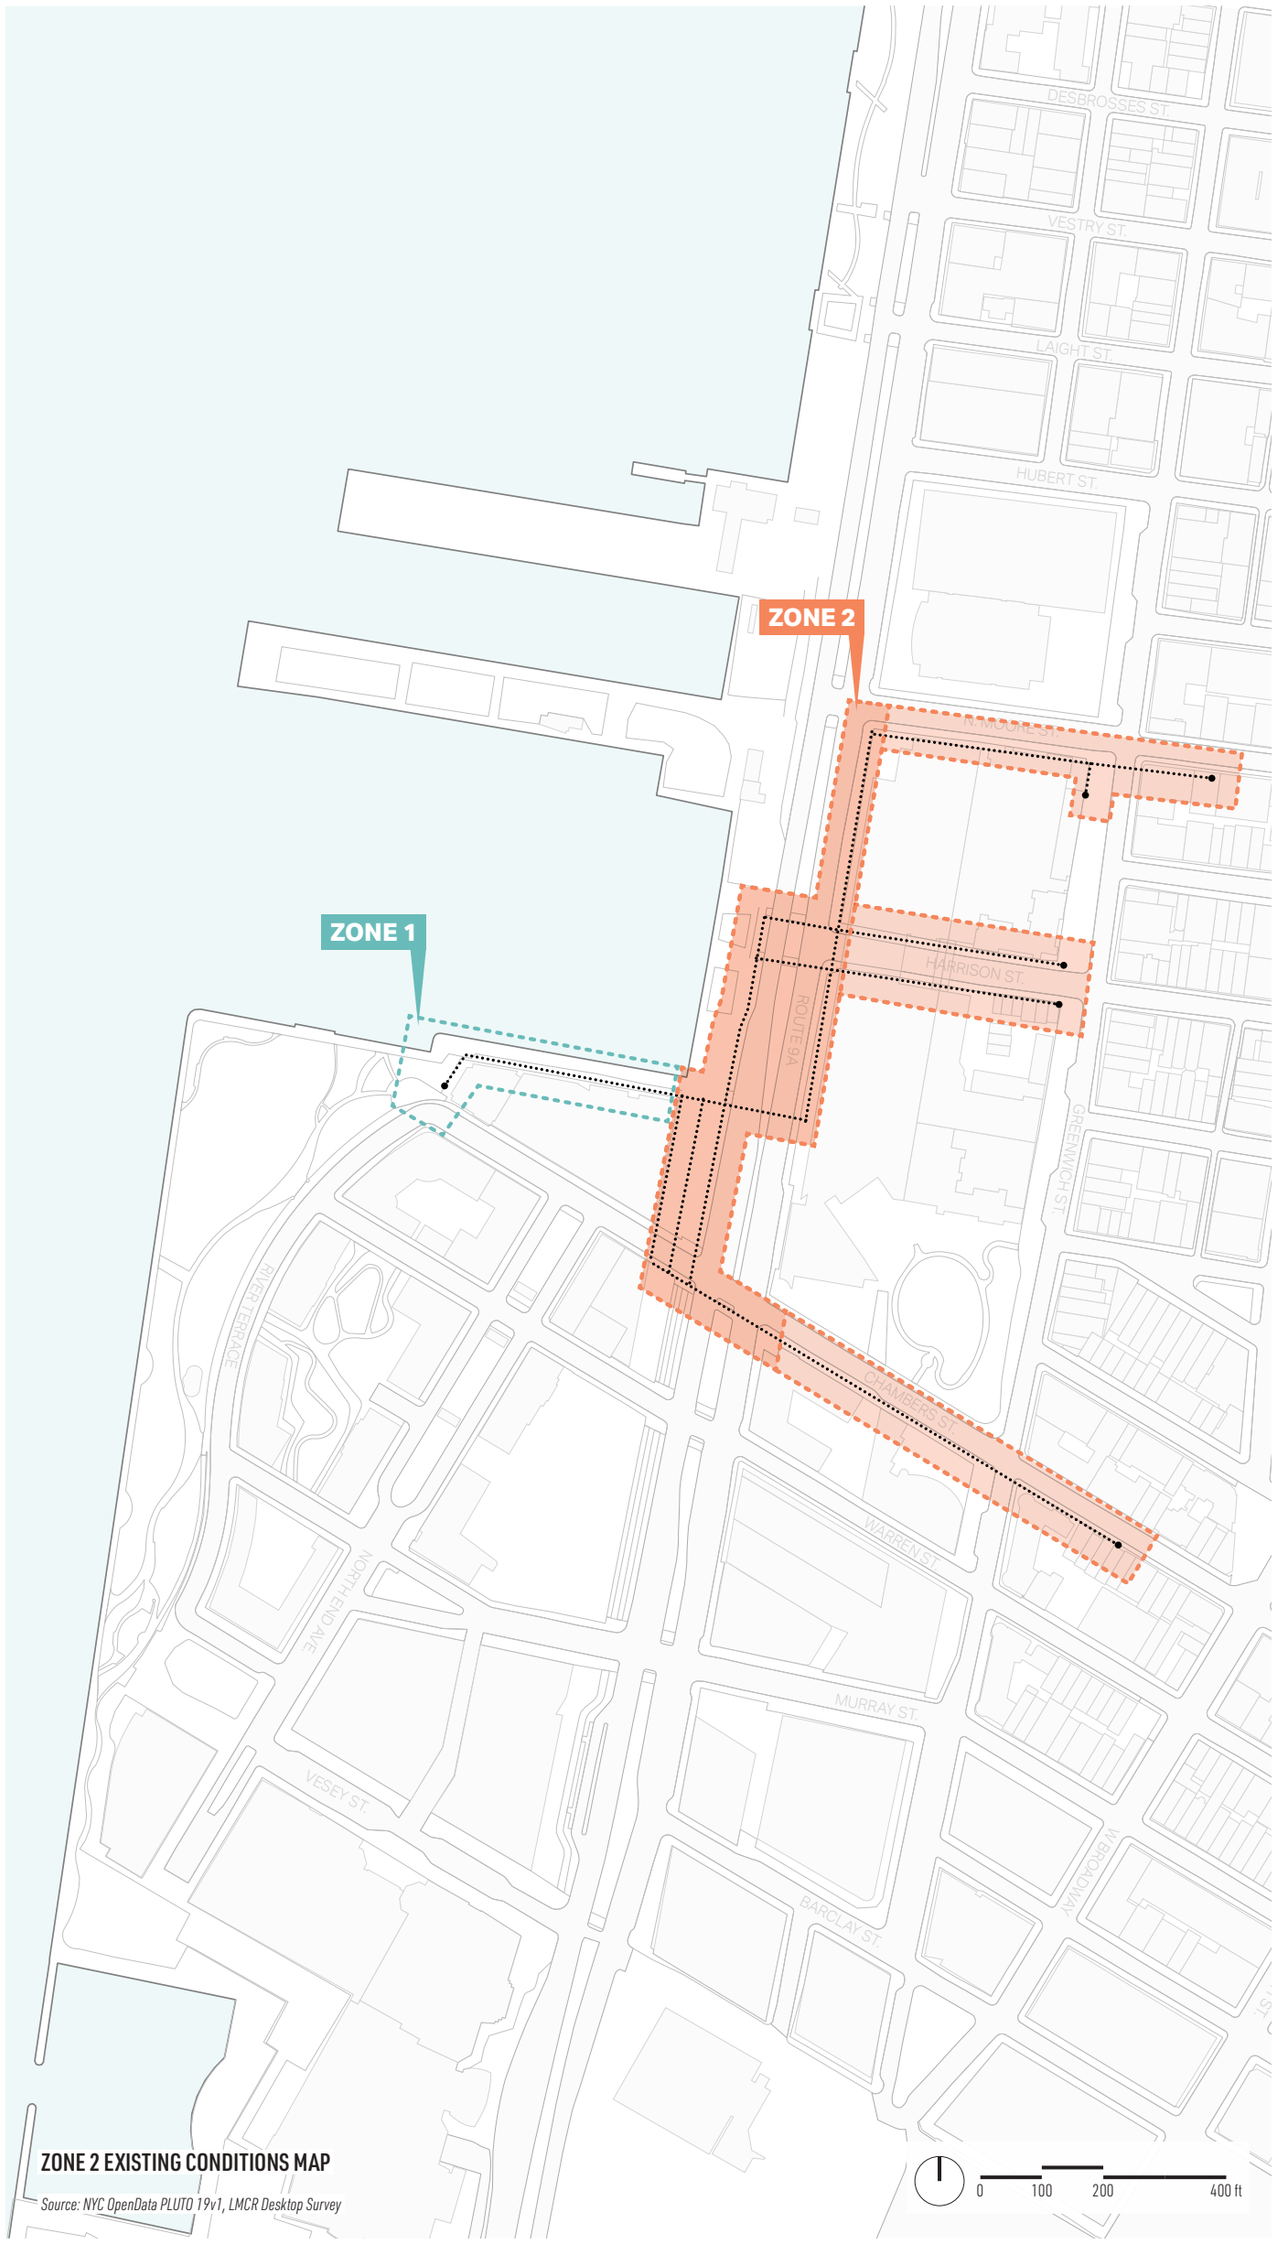
ZONE 2 CHARACTER

Zone 2 connects Battery Park City to the TriBeCa neighborhood. The surrounding character and materials at the beginning of the alignment is different than at the end. The team studied the materiality of both neighborhoods, as shown in the elevations below, to inform the design of the toolkit and ultimate alignment.



Battery Park City

Tribeca

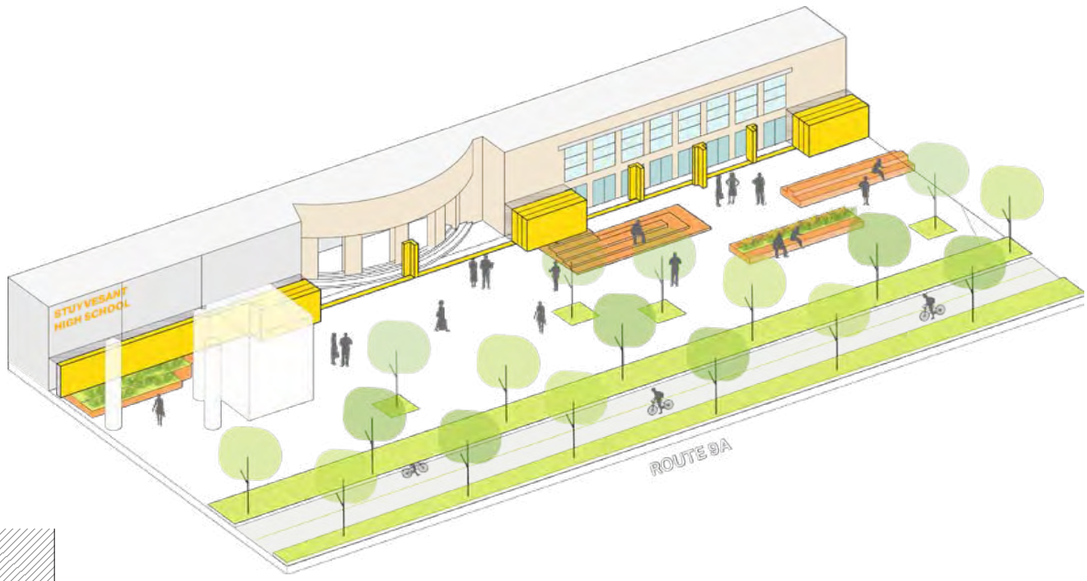


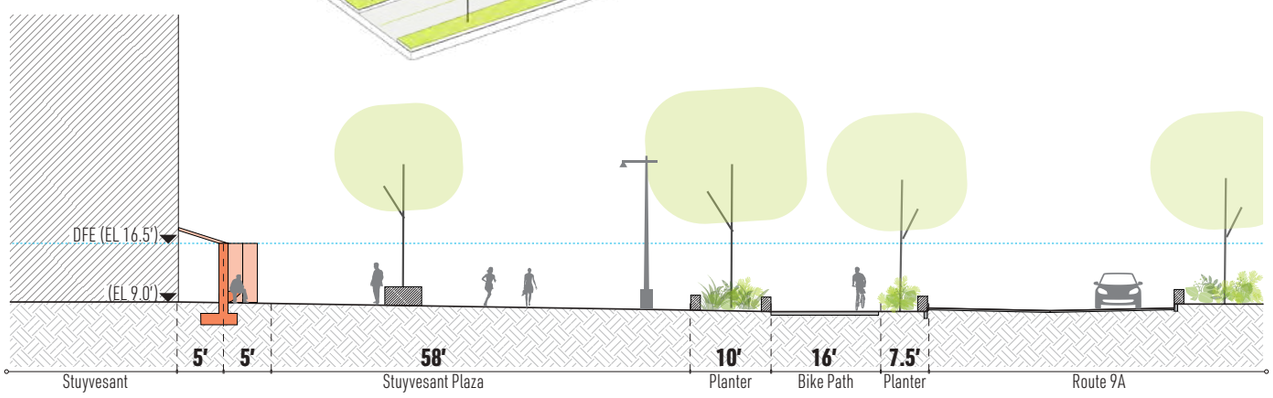
ZONE 2 EXISTING CONDITIONS MAP

Source: NYC OpenData PLUTO 19v1, LMCR Desktop Survey

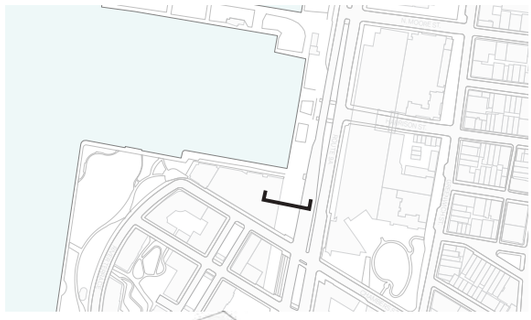
STUYVESANT

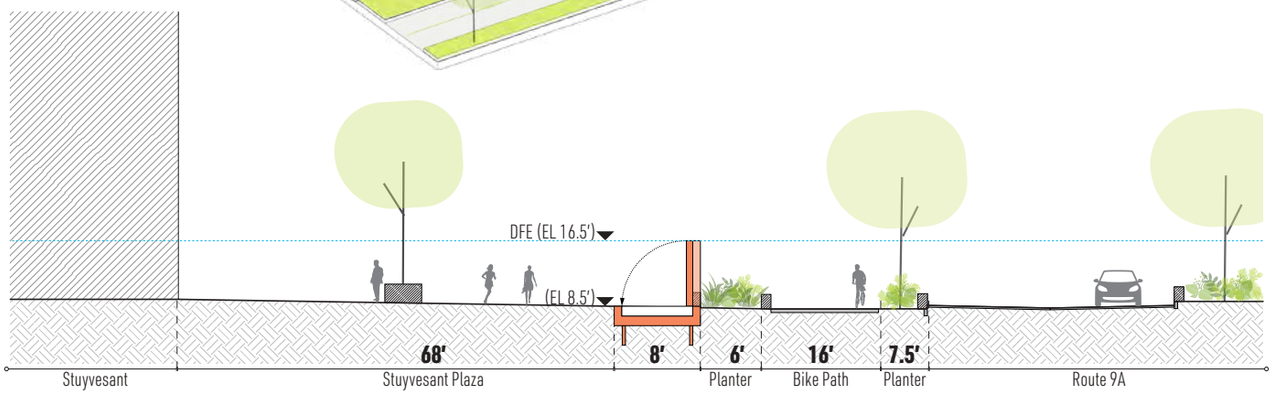
The Stuyvesant alignment option explored three alignment iterations that would connect to Chambers street, making it the longest option. These studies show the ramifications of placing the alignment along the building, along the edge of the public plaza, or along the edge of the bike path. The type and footprint of risk-reduction infrastructure is shaped by the immediate surroundings, circulation, and design requirements. Where existing canopy would be impacted, shade is replaced using fixed structures.



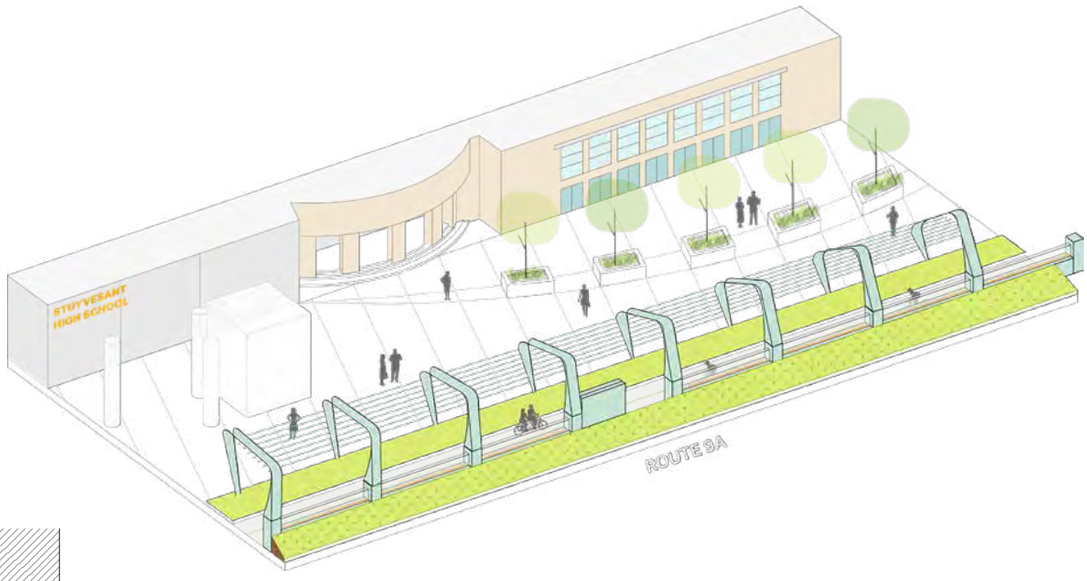


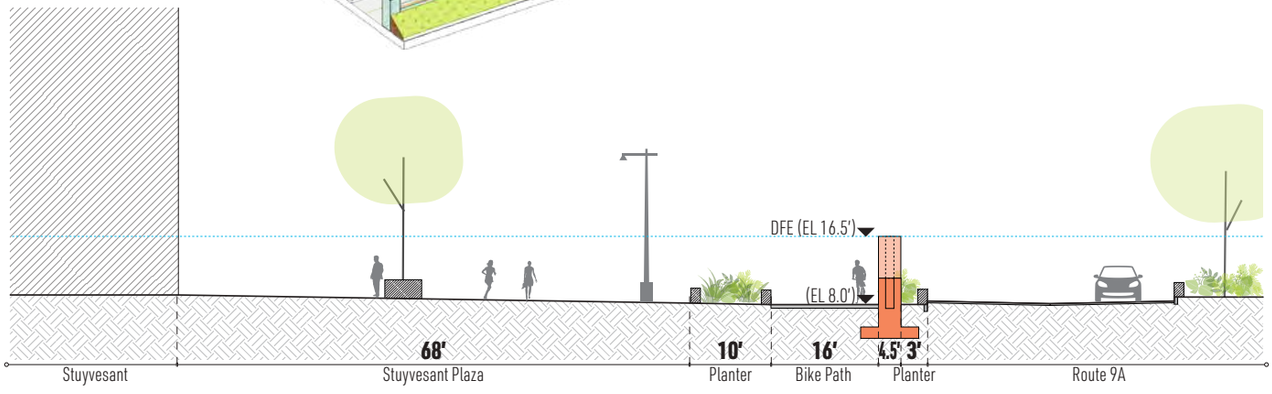
Alignment Along Building





Alignment Along Edge of Plaza

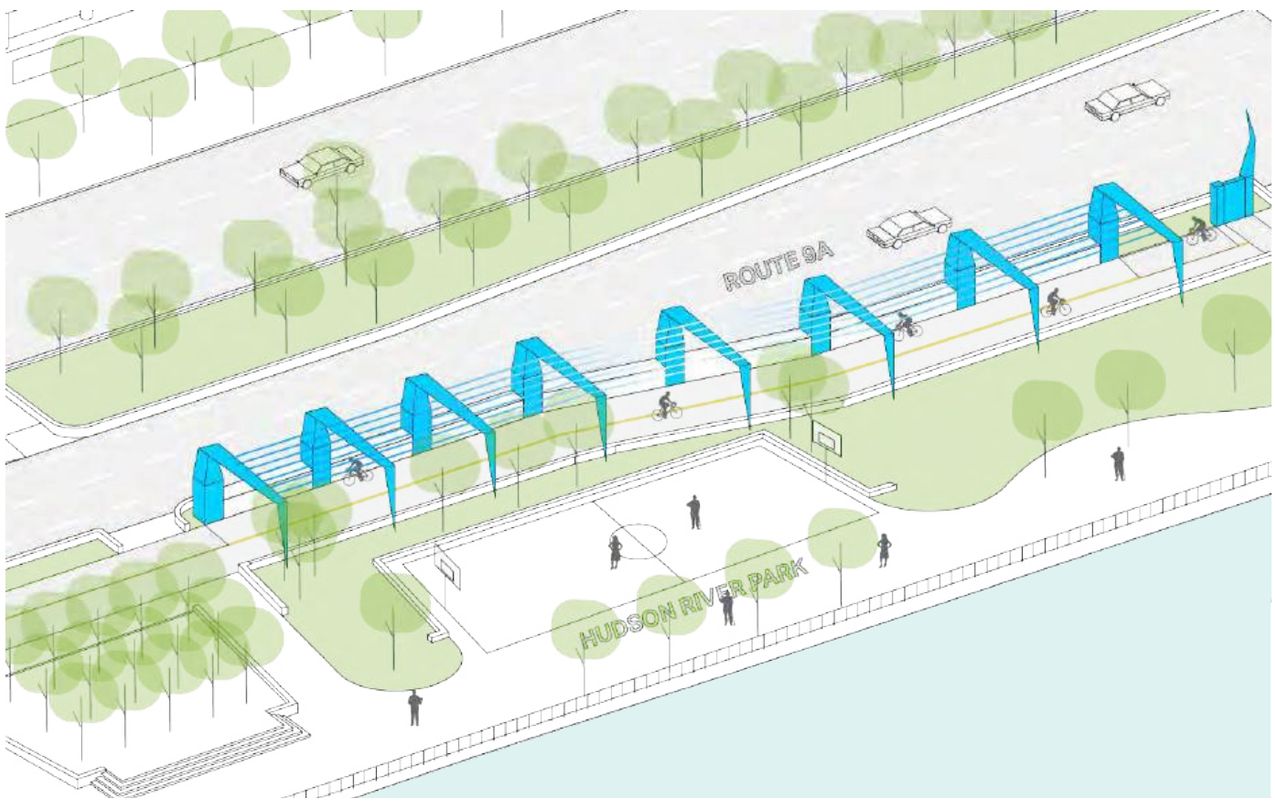


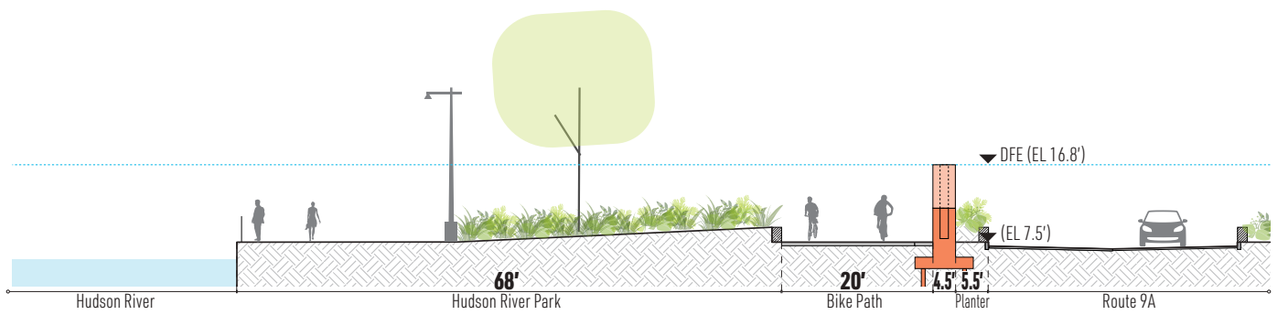


Alignment Along Bike Path

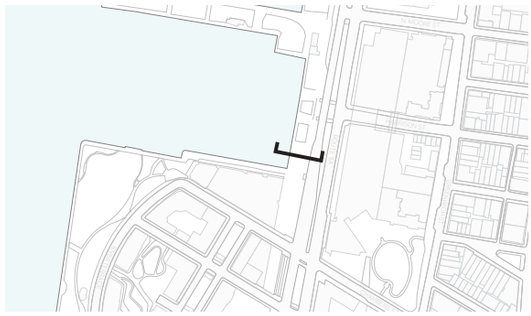
HUDSON RIVER PARK

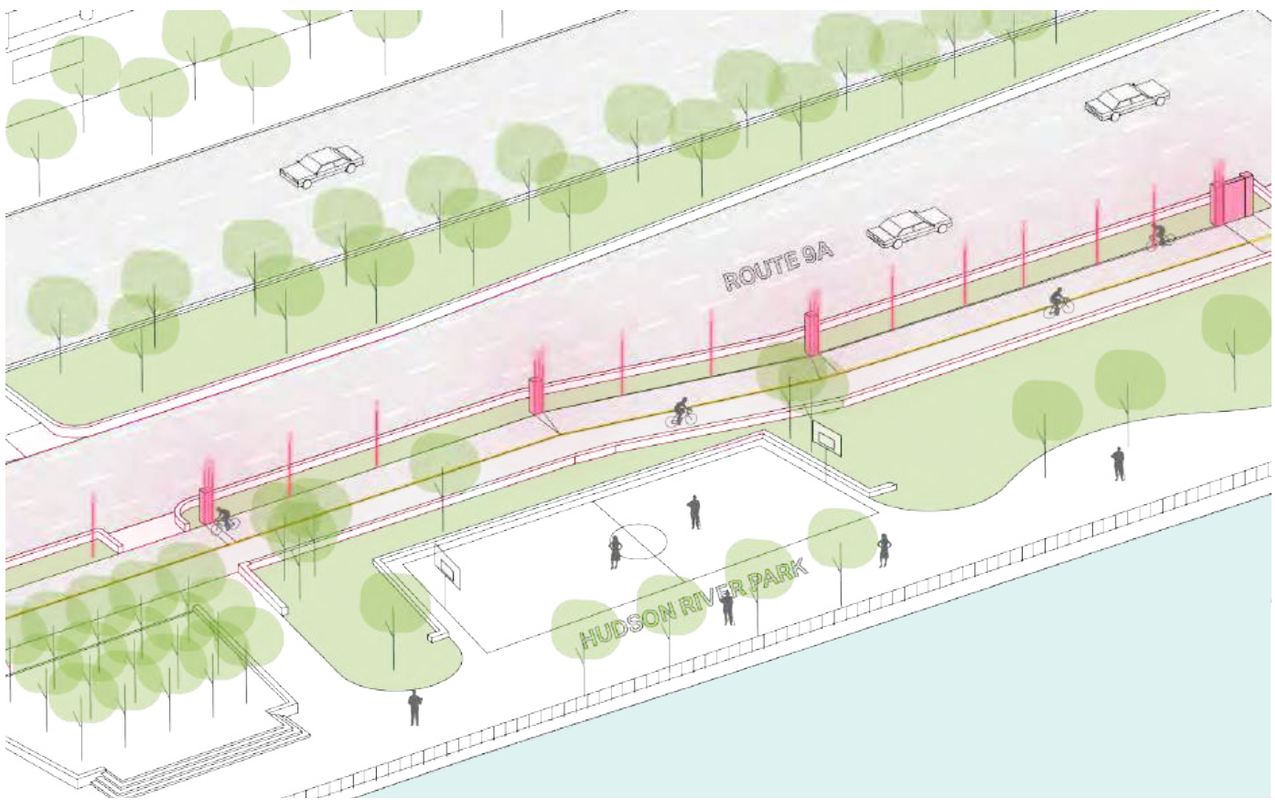
The team studied two options along Hudson River Park. The first uses vertical deployables in between Route 9A and the bike path. Shade lost through required tree removal is replaced using integrated canopy structures. The second study tests flip-up gates along the bike path itself. The columns of the flip-up gates provide opportunity for public art and or wayfinding elements. Both options necessitate the removal of one row of trees between the bike path and the roadway.

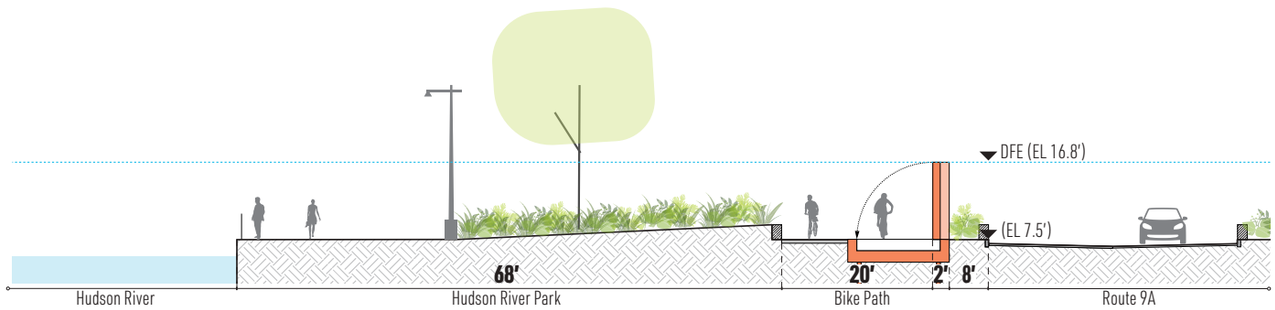




Vertical Deployables



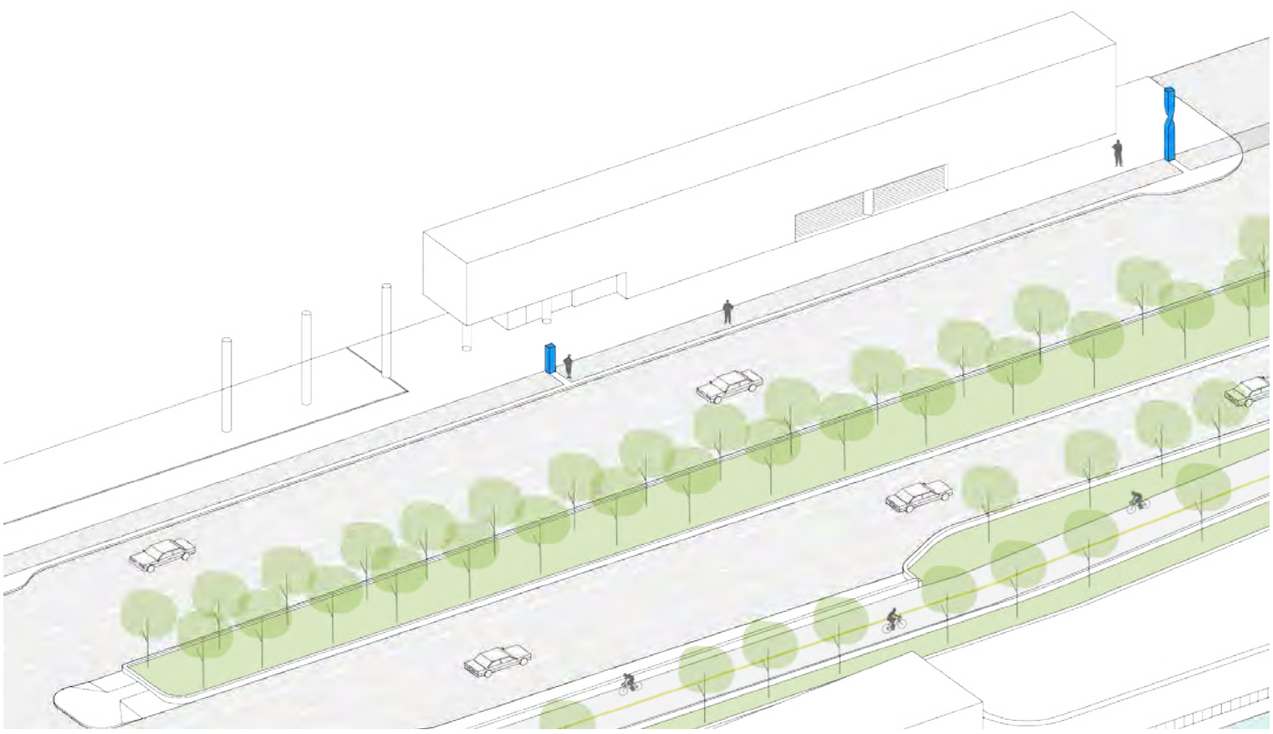


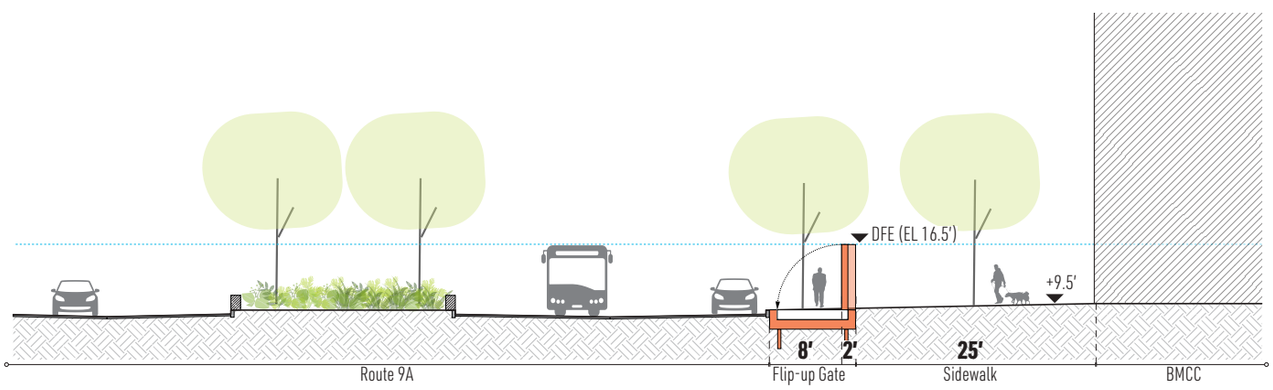


Flip-up Gates

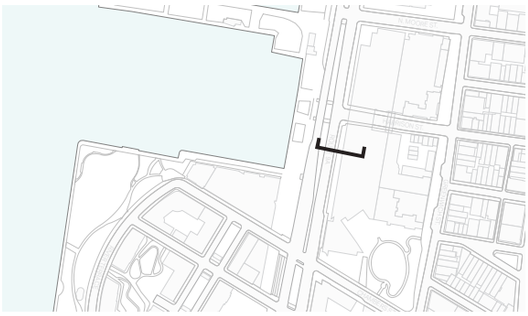
BMCC

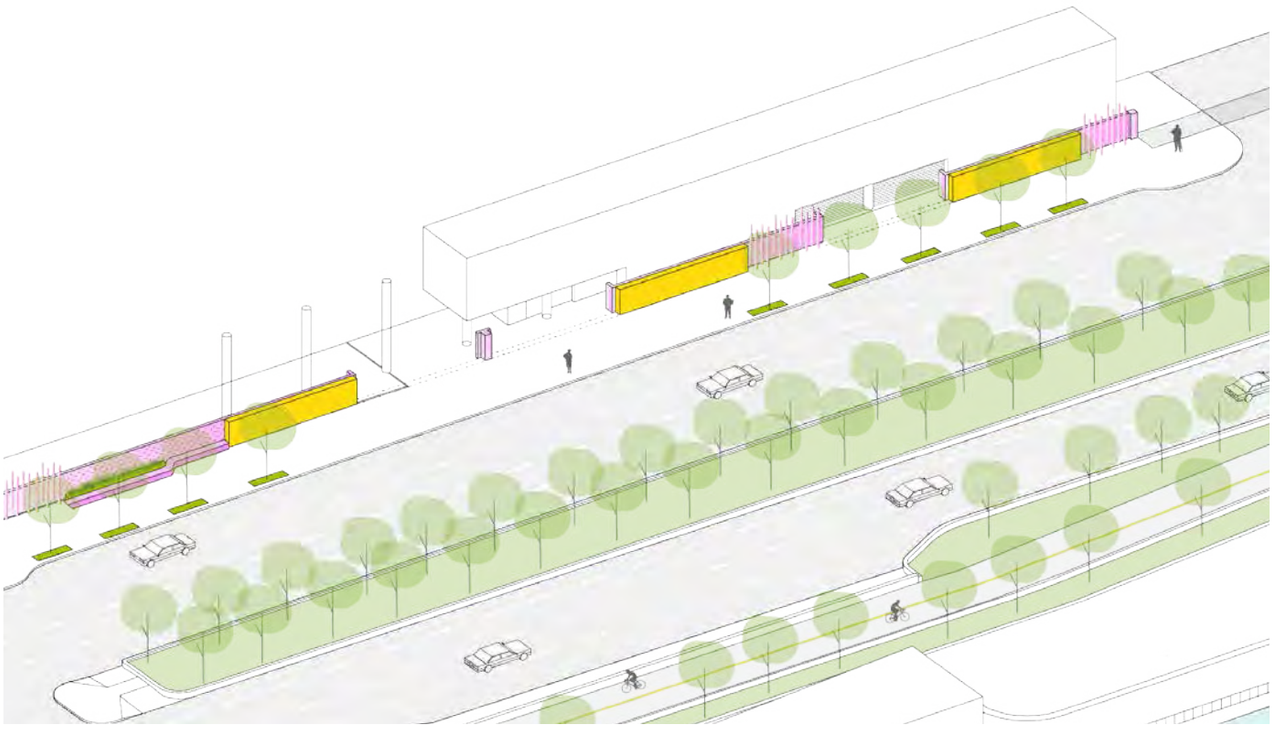
Two options were studied adjacent to BMCC, along route 9A. The first tests the placement of flip-up gates along the curb. This necessitates the removal of street trees, but creates an opportunity to add sculptural or wayfinding elements along the sidewalk using the flip-up gate columns. The second tests a combination of roller gates and fixed walls at the building edge, allowing the trees to remain and new amenities to be placed.

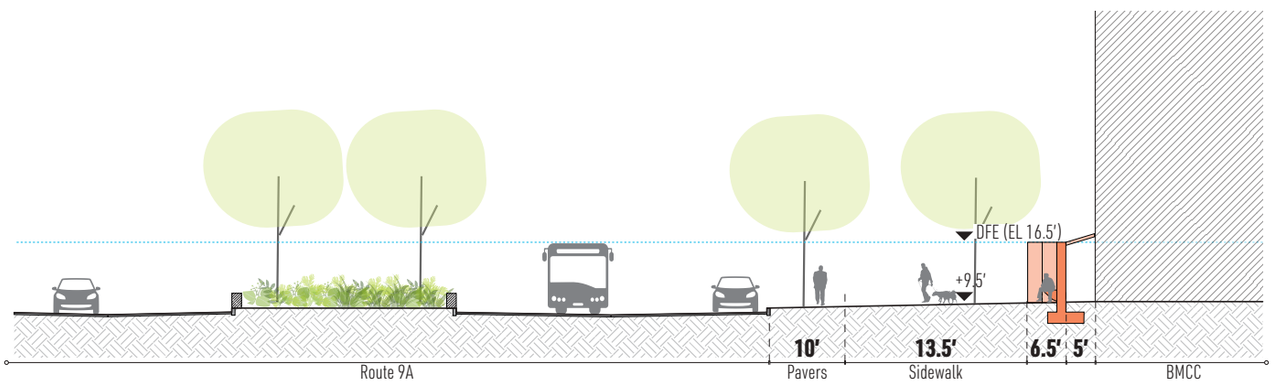




Flip-up Gates Along Curb



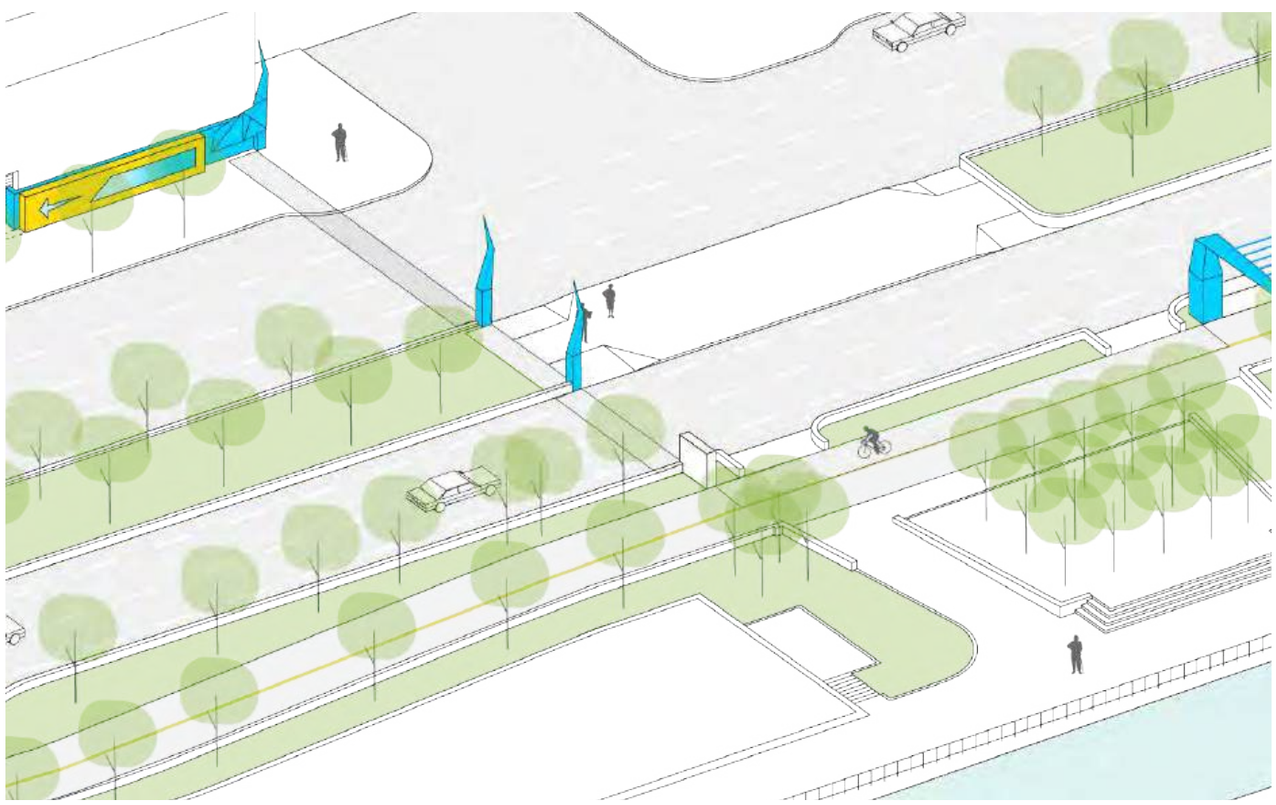


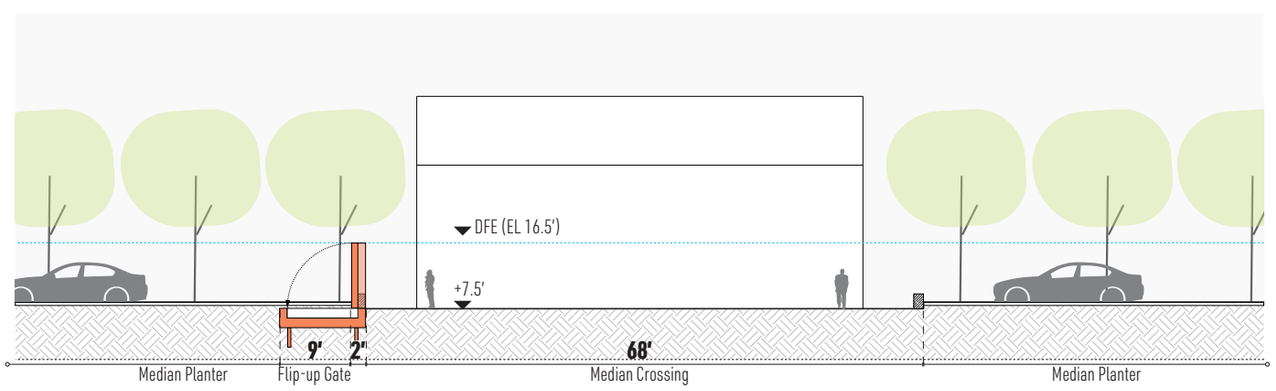


Roller Gates and Fixed Walls Along Building

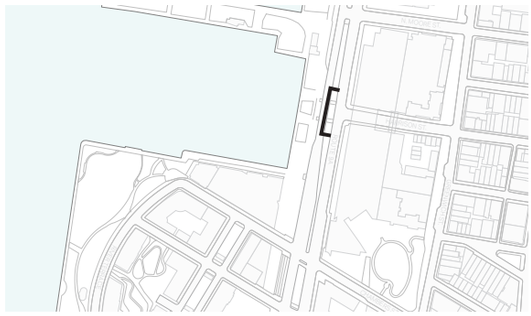
CROSSINGS

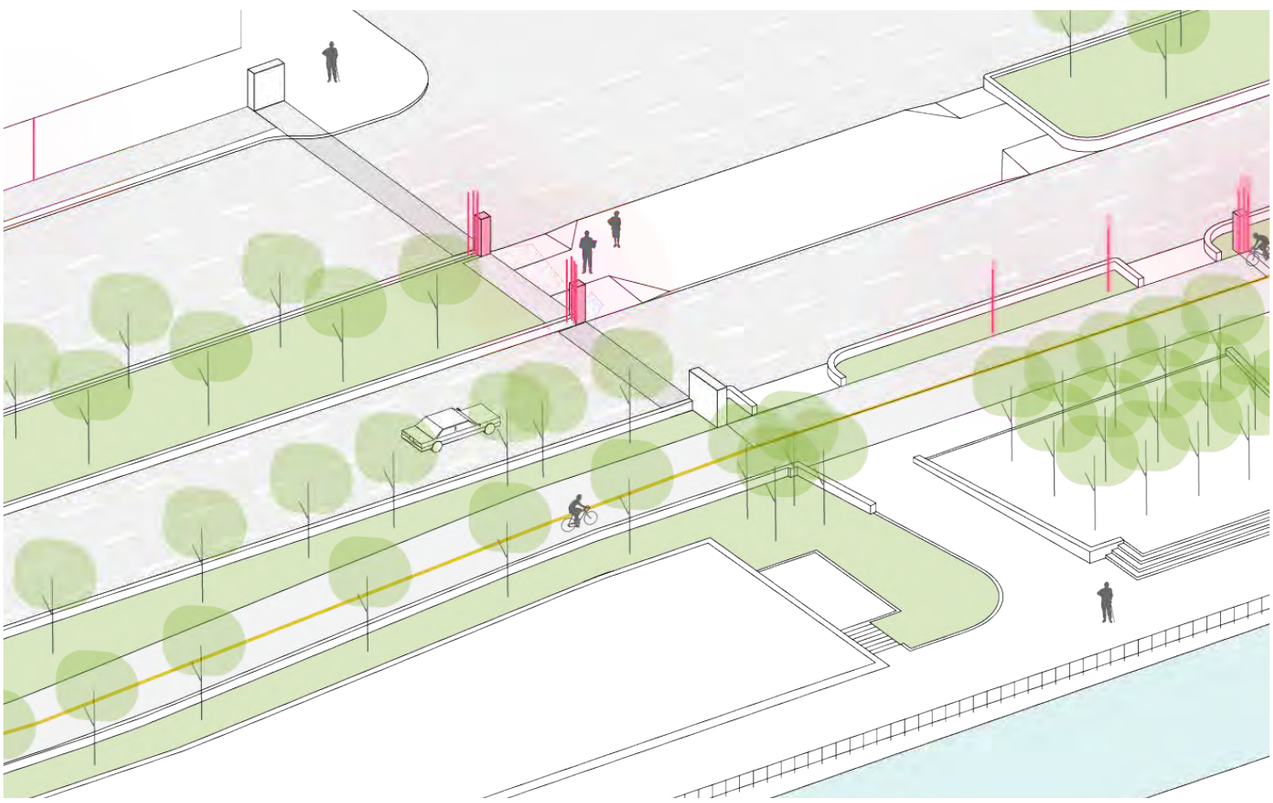
The crossings connect alignments on opposite sides of route 9A. Flip-up gates are used in the roadway to maintain vehicular circulation. The columns in the median can serve as lighting, wayfinding, or sculptural features associated with pedestrian crossing.

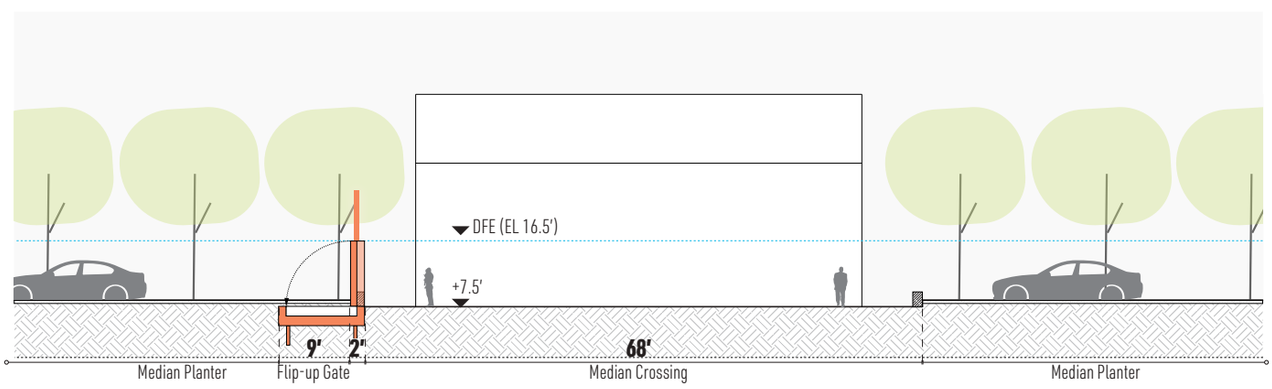




Lighting Wayfinding



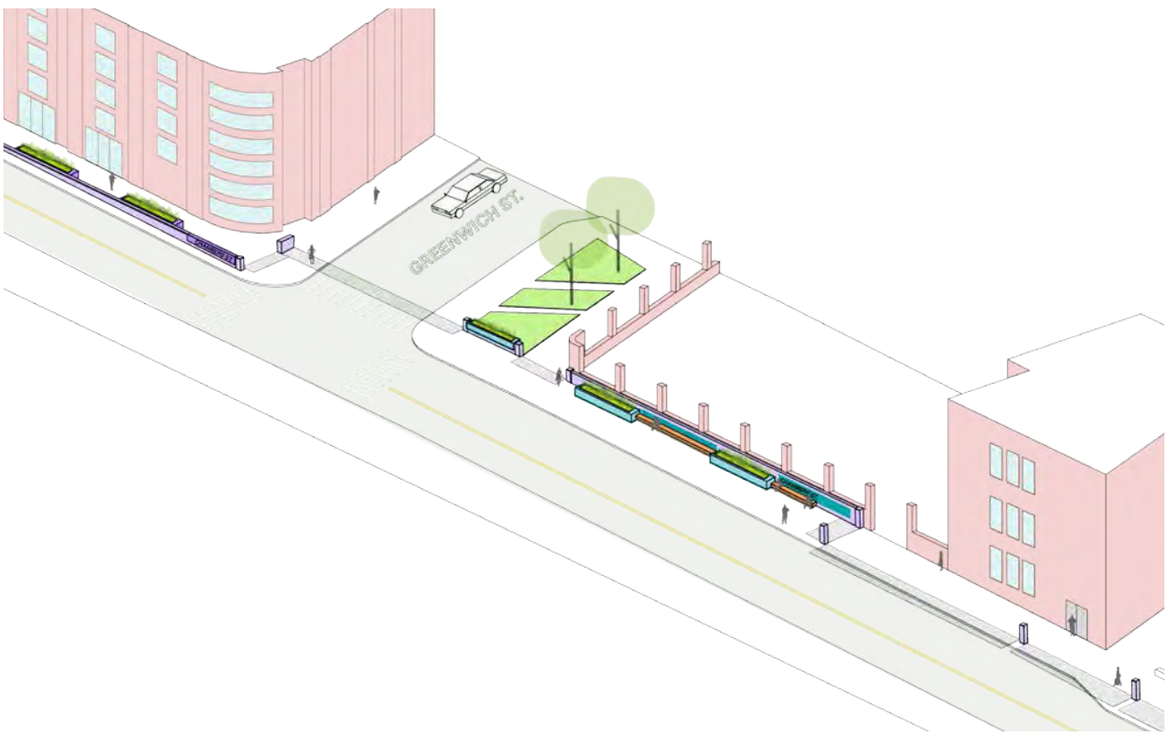


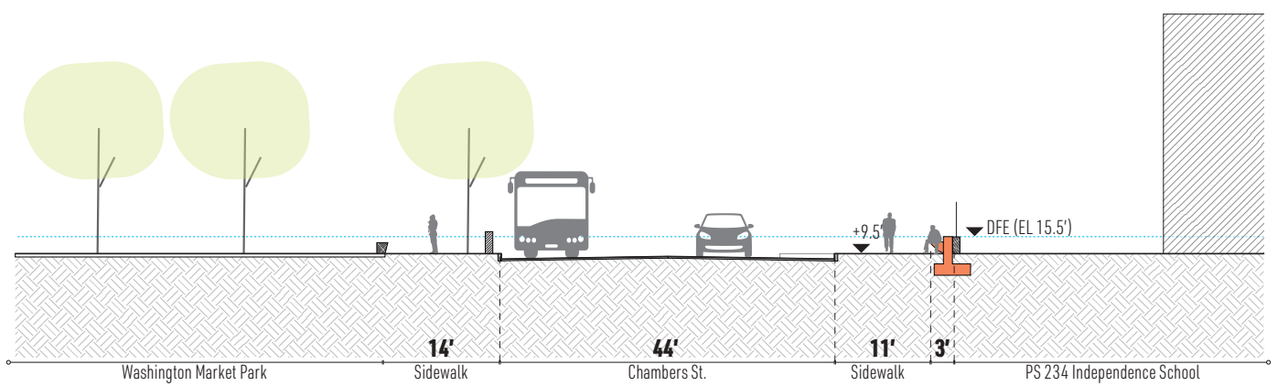


Sculptural Features

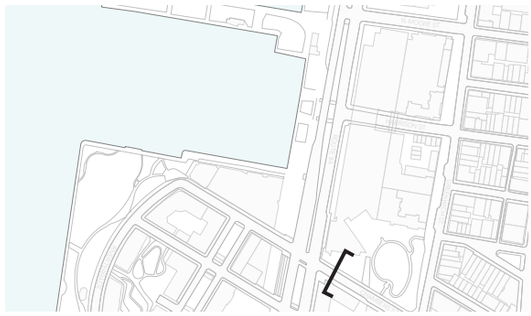
CHAMBERS ST.

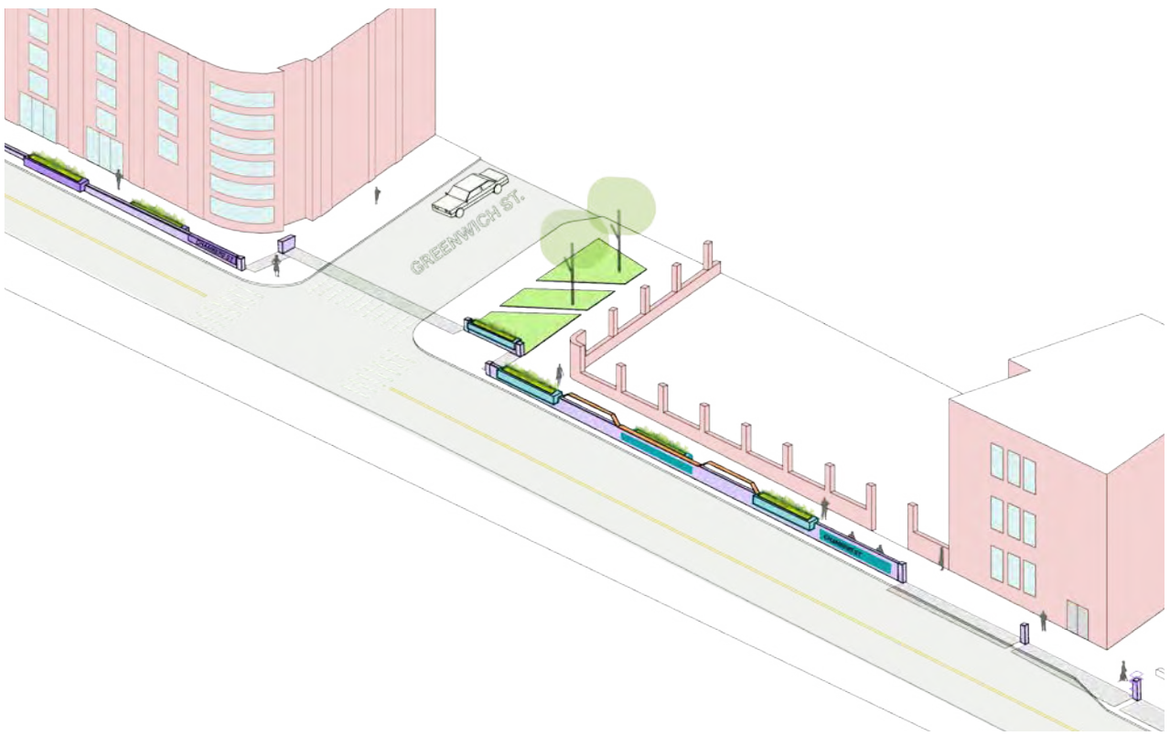
The Chambers Street option is the longest alignment but does not intersect any LPC landmarks. This street has a sidewalk that varies in width that allows for two alignment routes to be considered adjacent to the School and Playground for this tie-back. A passive floodwall could be utilized in two locations: immediately adjacent to the existing wall and fence around the school playground, or closer to the curb line in the same area. Both options will require the use of flip up gates to the west of this location running towards the West Side Highway, and flip up gates would also be required for both options at the intersection with Greenwich Street to maintain vehicular and pedestrian circulation routes. The passive floodwall component in both options can also feature integrated urban amenities such as seating, planters and signage.

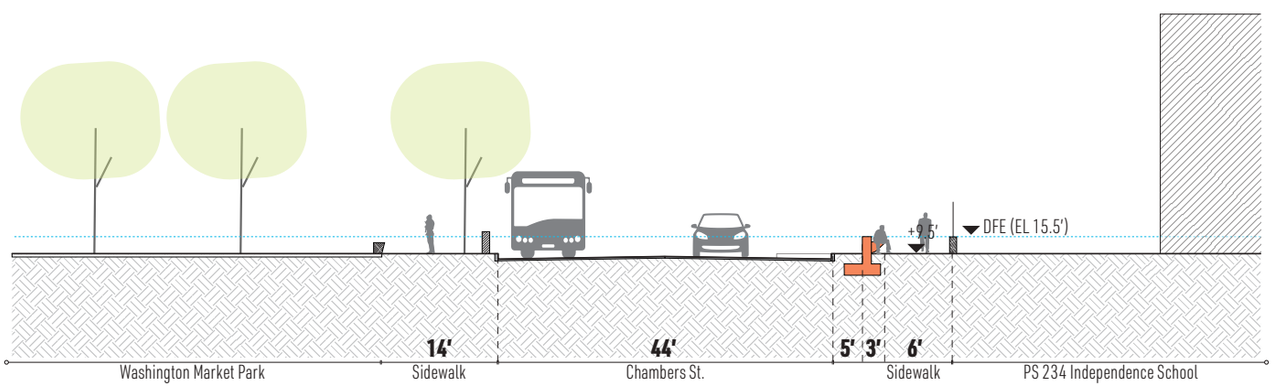




Passive Floodwall Along Existing Wall



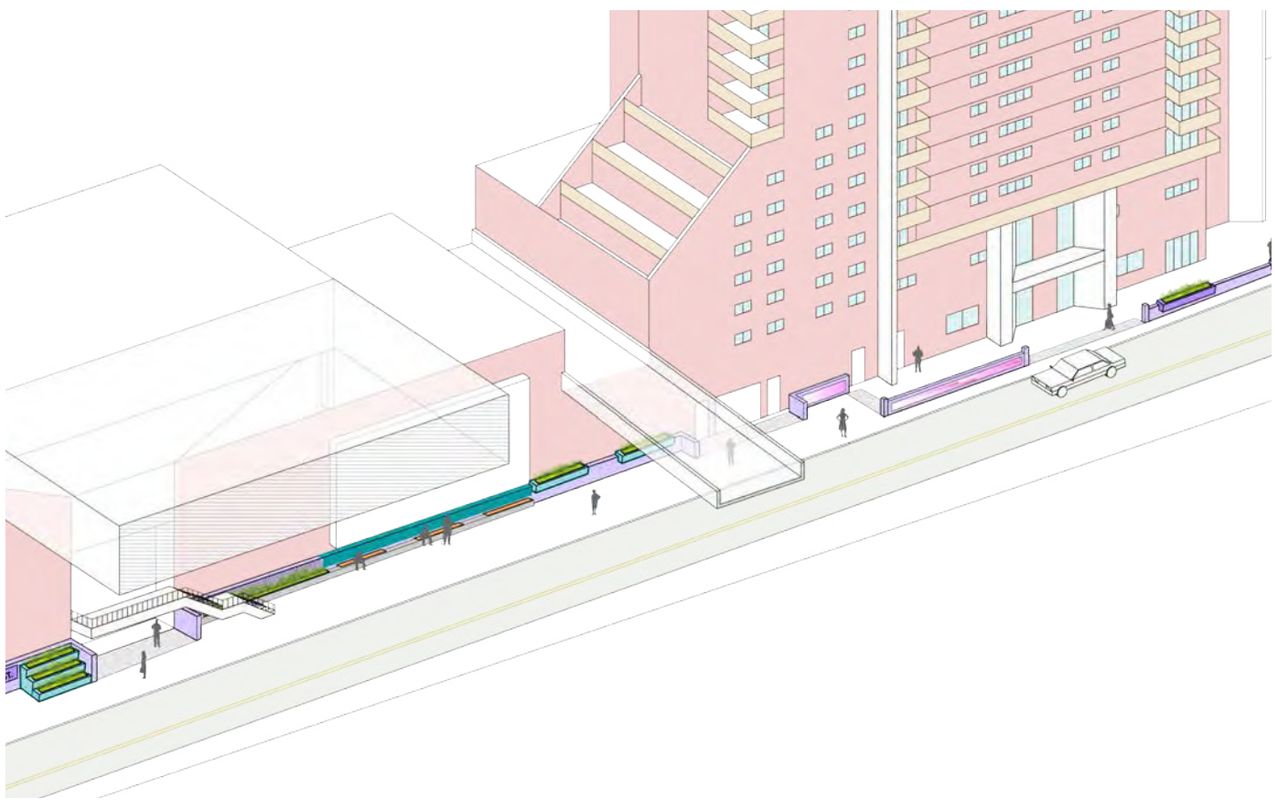


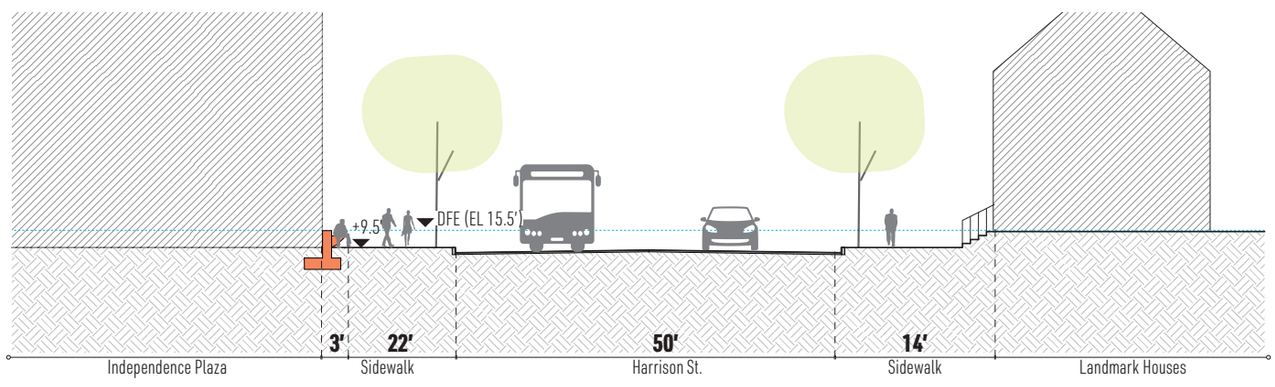


Passive Floodwall Along Curb

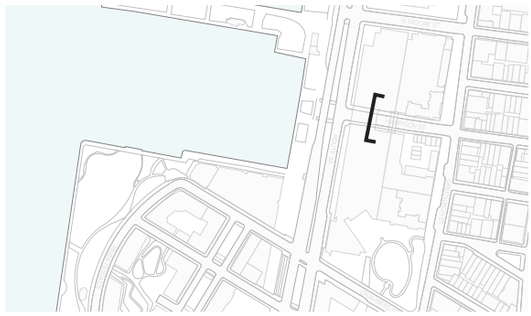
HARRISON ST.

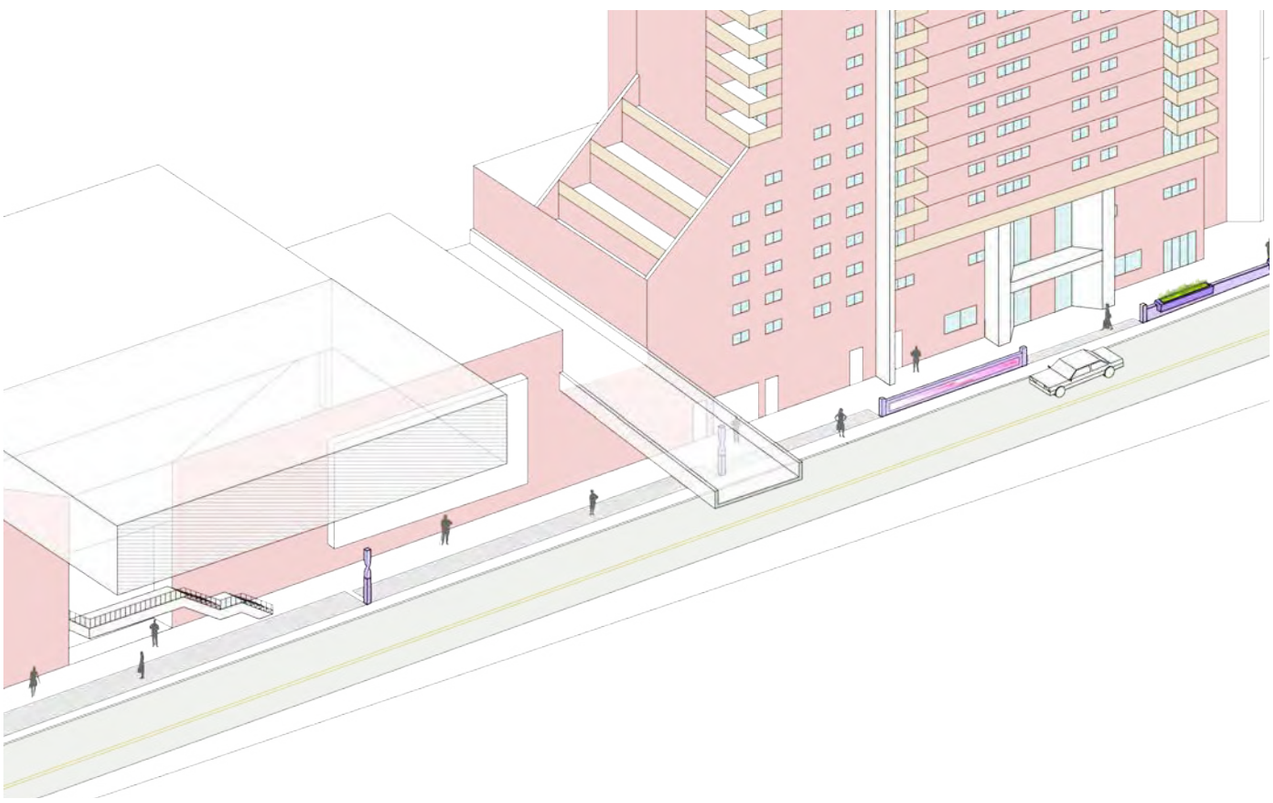
The Harrison Street option must facilitate continued access to a variety of building entrances and existing street parking. A passive floodwall could be utilized in two locations: immediately adjacent to the BMCC building facade, or closer to the curb line in the same area. Flip up gates would also be required for both options as you pass the BMCC building and approach the intersection with Greenwich Street to maintain vehicular and pedestrian circulation routes. The passive floodwall component in both options can also feature integrated urban amenities such as seating, planters and signage, however an alignment that is located nearer the curb will rely much more heavily on flip up gates and would minimize the length of passive floodwall and associated urban amenities.

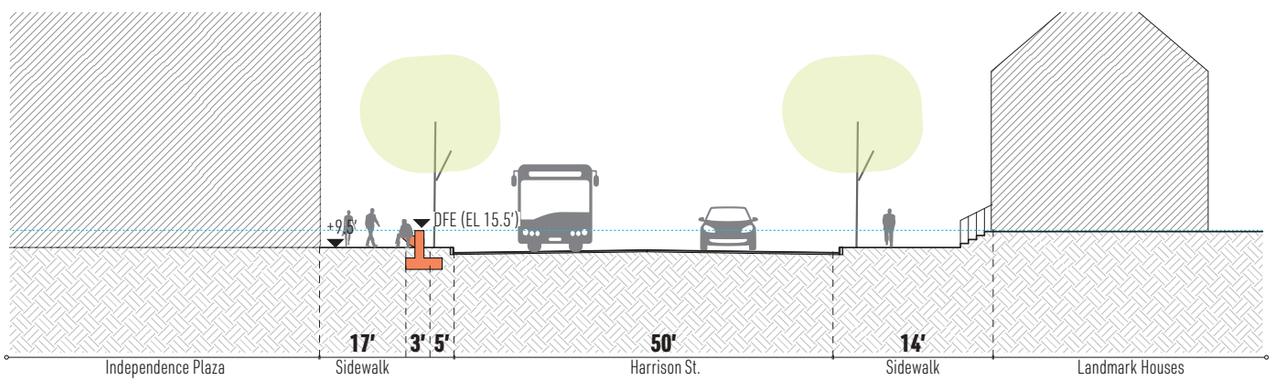




Passive Floodwall Along Building



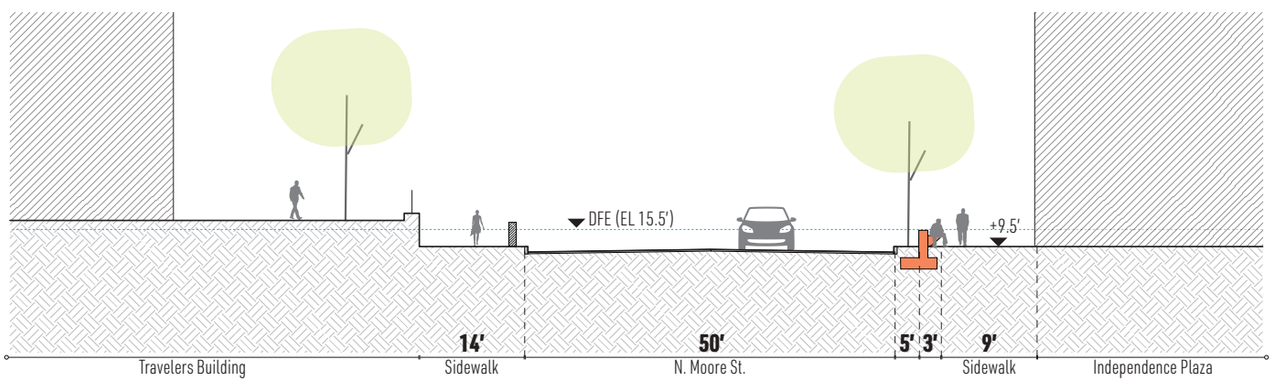




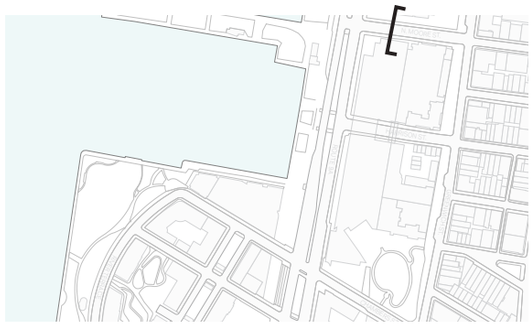
Passive Floodwall Along Curb

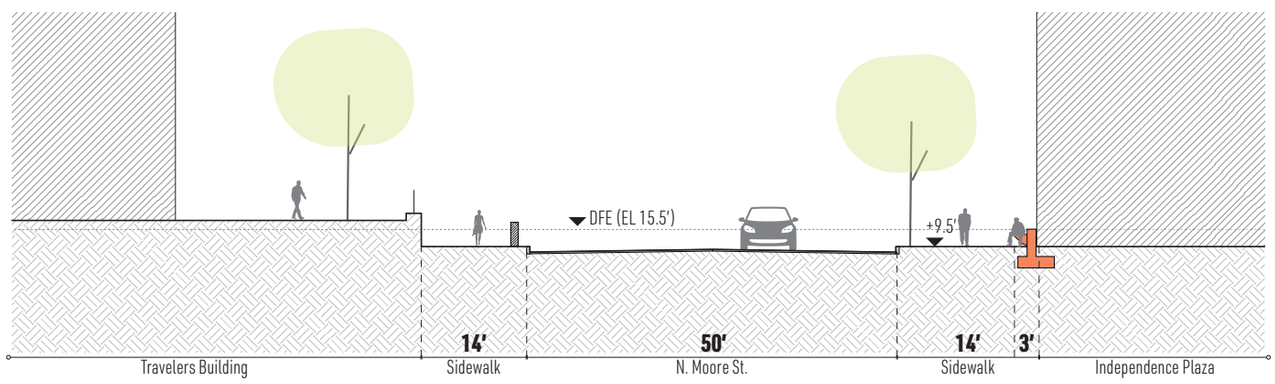
N. MOORE ST.

The North Moore Street option is located the furthest to the north of any of the tie-back options. This tie-back has sidewalks that vary in width allowing for two alignment routes to be considered. A passive floodwall could be utilized in two locations: immediately adjacent to the existing building facade, or closer to the curb line in the same area. Additionally, the existing site topography allows for the tie-back to terminate in multiple locations: to the south on Greenwich Street, or to the east on North Moore Street after crossing the Greenwich Street intersection. Each option will require the use of flip up gates to maintain vehicular and pedestrian circulation routes. The passive floodwall component in both options can feature integrated urban amenities such as seating, planters and signage.



Passive Floodwall Along Curb





Passive Floodwall Along Building

06
PREFERRED ALIGNMENT

PREFERRED ALIGNMENT

The preferred alignment extends through both Zones 1 and 2. This alignment was chosen based on stakeholder and community input generated through the previous conceptual studies and tested implications.

This chapter describes the preferred alignment in detail for both Zone 1 and 2, showing how challenges of protection, circulation, and experience are resolved. The designs shown here will guide the development of detailed design in later phases of work.

ZONE 1

ESPLANADE GARDENS

The design includes access and circulation, hidden flood risk reduction infrastructure, and rich planting areas that offers shaded seating and gathering areas.

ZONE 2

HUDSON RIVER PARK

This stretch of the alignment uses a combination of vertical and flip-up deployable barriers, establishing a buffer between the bike route and roadway.

CROSSINGS

Crossing route 9A is achieved using flip-up barriers placed in the roadway, and in the median with raised foundations.

BMCC

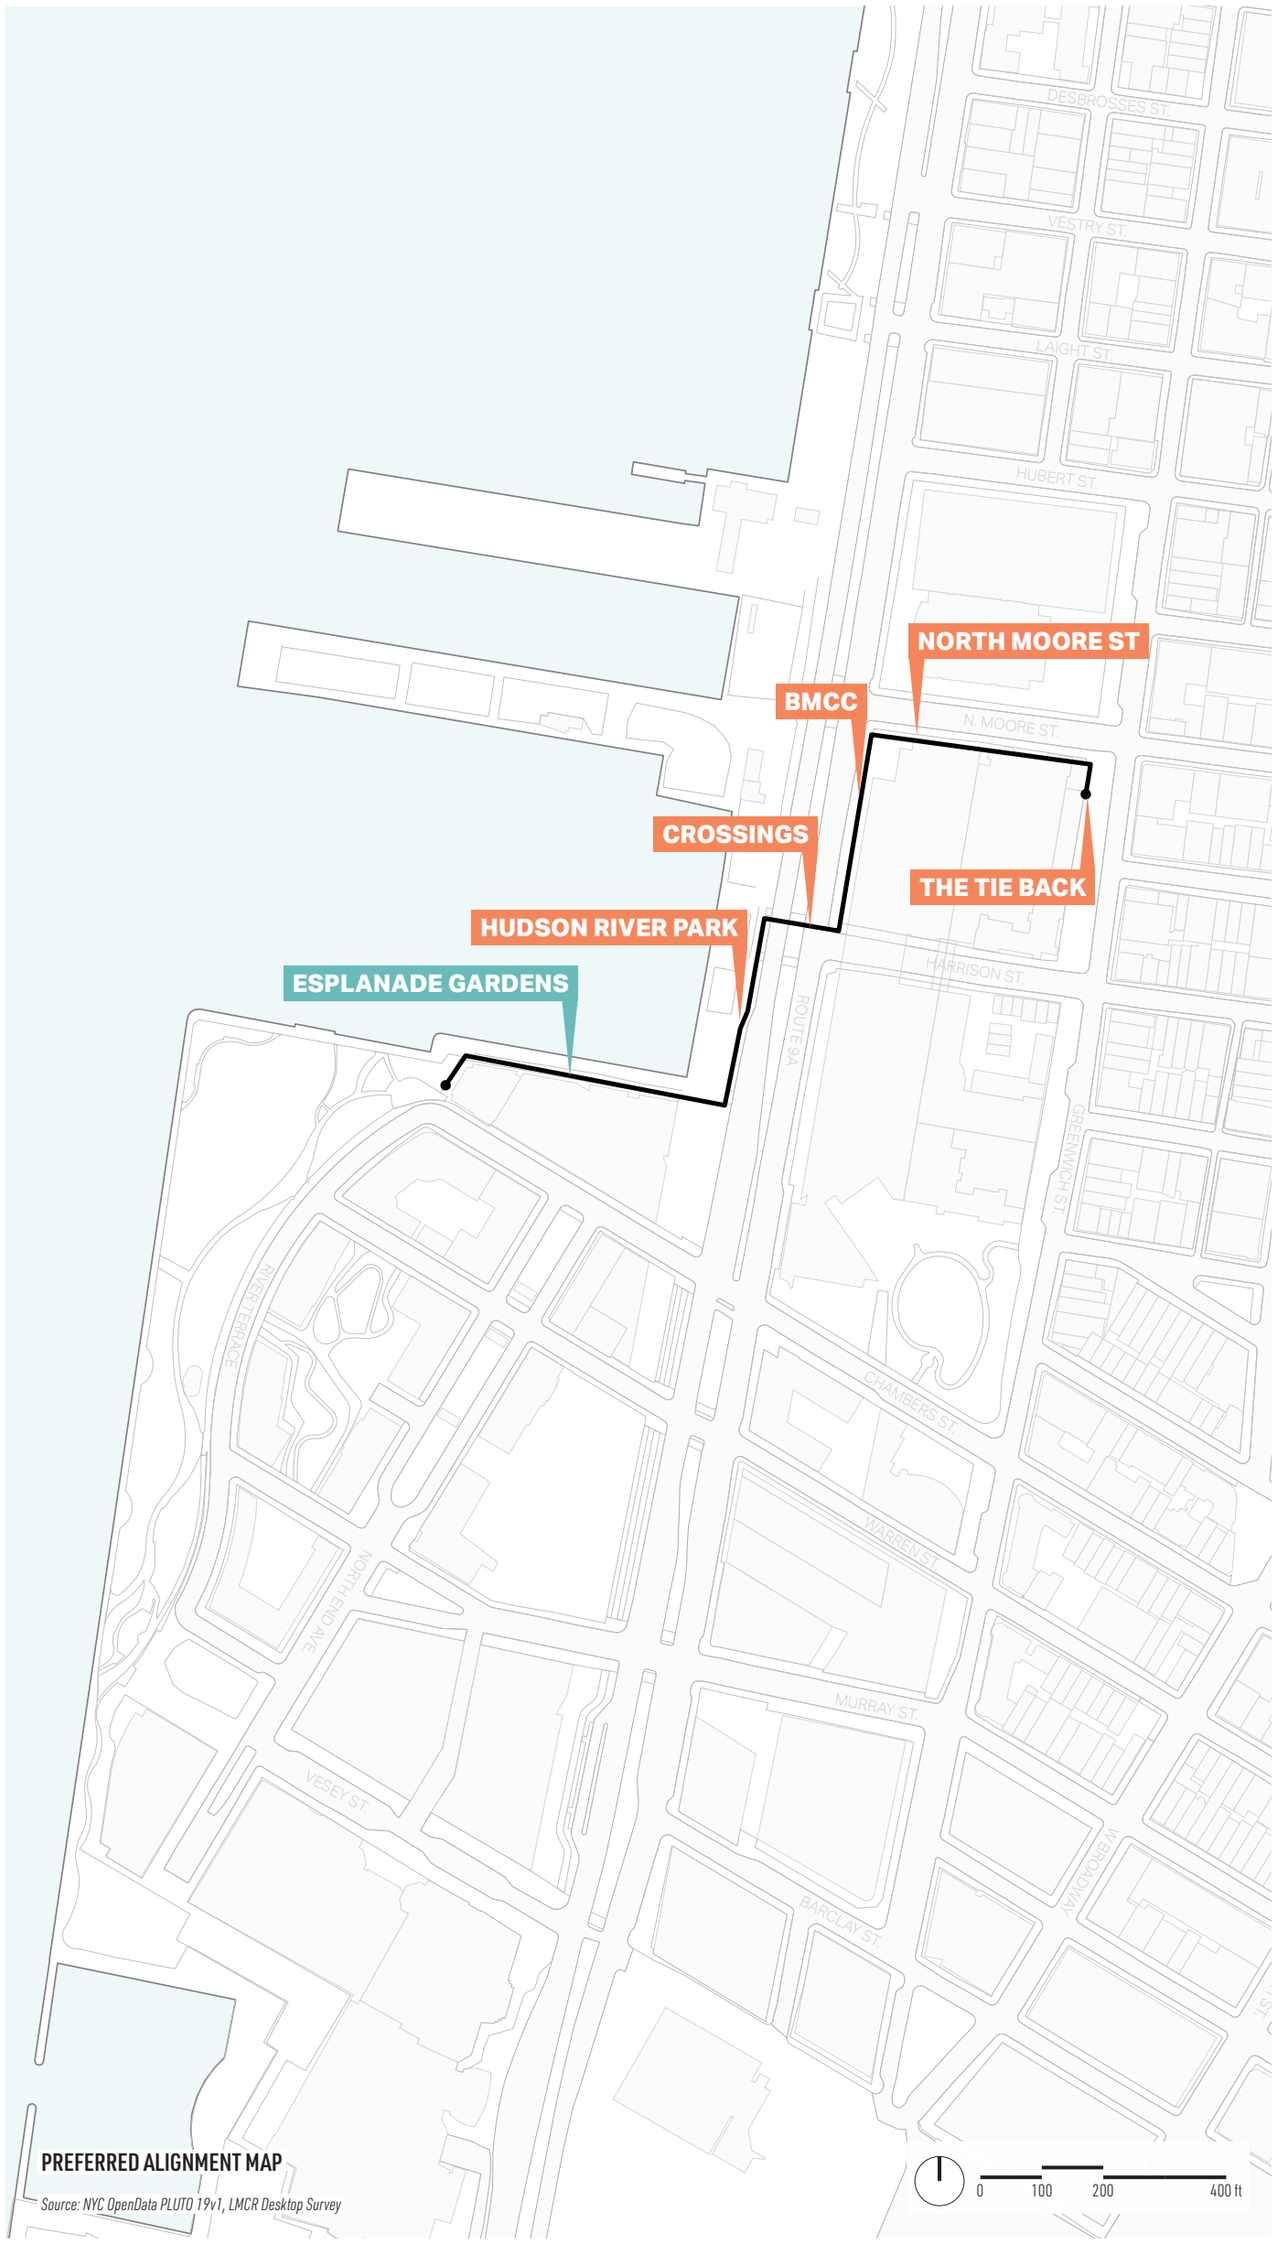
The alignment adjacent to BMCC will use a combination of fixed walls and rolling deployable gates where access is required.

NORTH MOORE STREET

A combination of fixed walls and rolling and vertical deployables make up the flood risk reduction alignment.

THE TIE BACK

The alignment options range from new edging along the building, planters, or raised outdoor seating.



PREFERRED ALIGNMENT MAP

Source: NYC OpenData PLUTO 19v1, LMCR Desktop Survey

ZONE 1 CONCEPT

ESPLANADE GARDENS

The Esplanade Gardens Concept for Zone 1 combines the preferred elements of the initial studies, hybrid concept, and stakeholder feedback into a single proposal. The esplanade gardens increase the width of the promenade by 17'-0", an amount that can be cantilevered over the rivers edge without the use of additional piles. This distance was carefully calculated using the minimum widths necessary to achieve the design goals of continuous universal access and circulation, hidden flood risk reduction infrastructure, and rich planting areas that offers shaded seating and gathering areas.

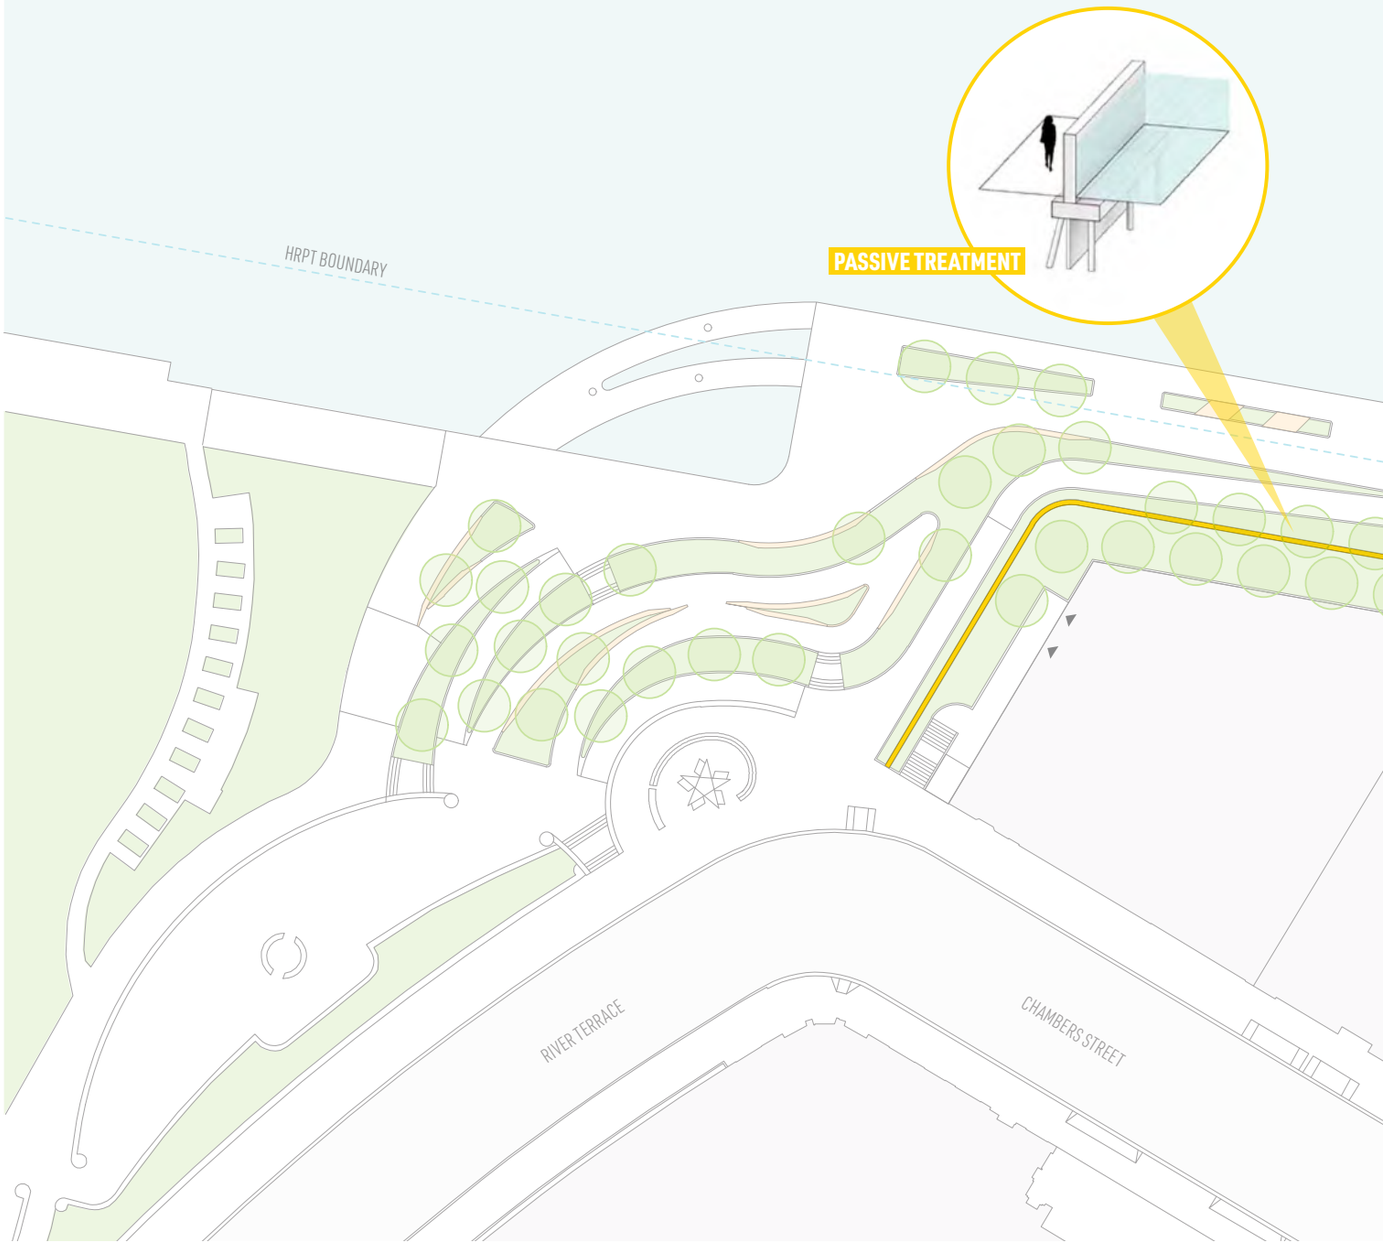
ESPLANADE GARDENS

FLOOD RISK REDUCTION

The selection and placement of flood risk reduction infrastructure in the esplanade gardens concept minimizes visual and physical impacts to the everyday pedestrian experience on the esplanade and connection to Rockefeller Park. The alignment primarily consists of a semi-buried floodwall, contained within sloped planting that reduces the exposed height of the wall and minimizes exposed walls. Flip up gates are located where egress is required from Stuyvesant High School. A roller gate, located behind a planted buffer, will extend in flooding conditions to connect to the Zone 2 portion of the alignment at Route 9A.



Flood Risk Reduction Plan

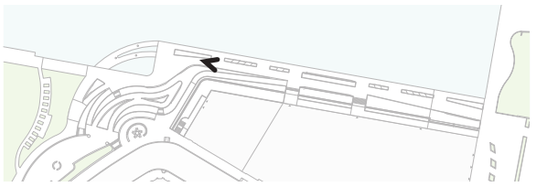
FLIP-UP GATES
ROLLER GATES

Dispersed seating located the length of the esplanade provides many options to visitors

Esplanade Gardens Walkway View



ZONE 1 CONCEPT

CIRCULATION

Universal access is integrated into the Esplanade Gardens. Sloped pathways, all under 5% slope, are integrated into primary pedestrian routes giving seamless access to all areas of the esplanade and gardens to all users. Stair access supplements this in specific locations. Emergency vehicular circulation is required along the length of the esplanade. This cannot extend onto the cantilevered outer 17' of the main esplanade, so seating, planters, and shade trees are located to provide this access along the main pathway. Lastly, a maintenance vehicle lift is located at the corner of Tribeca Pointe Apartments for park staff to access the maintenance room at the level below. More information on this can be found on page 120.

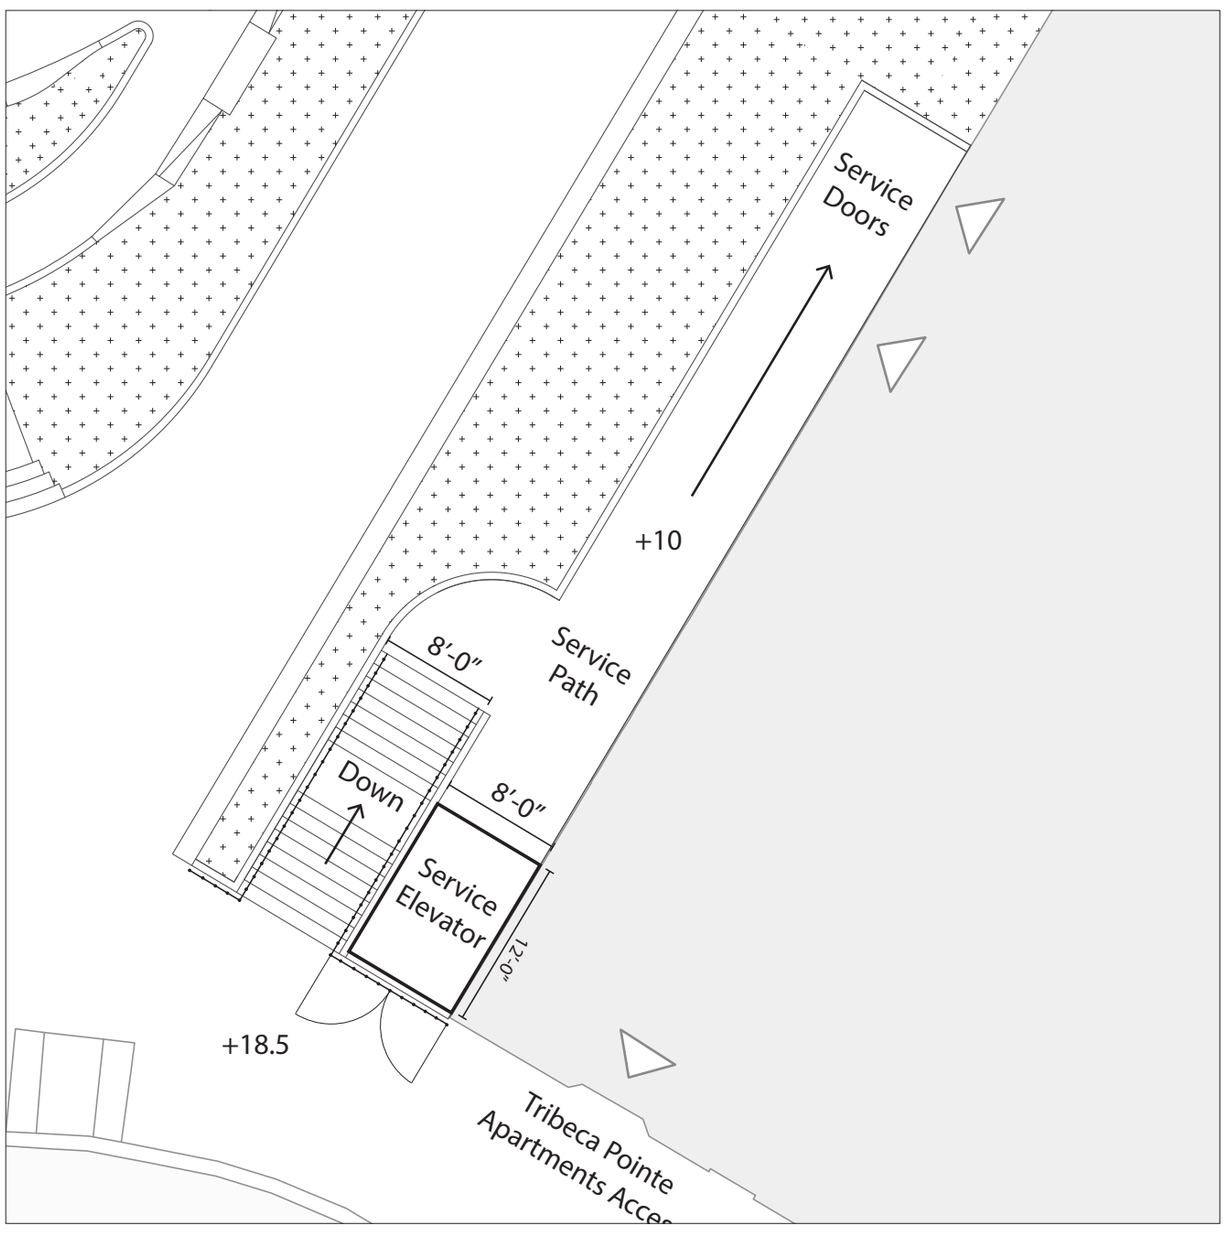
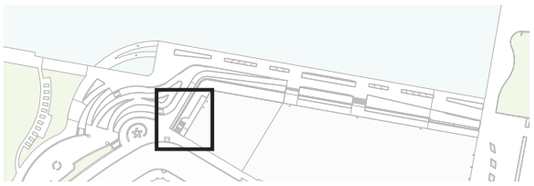
SECTION C

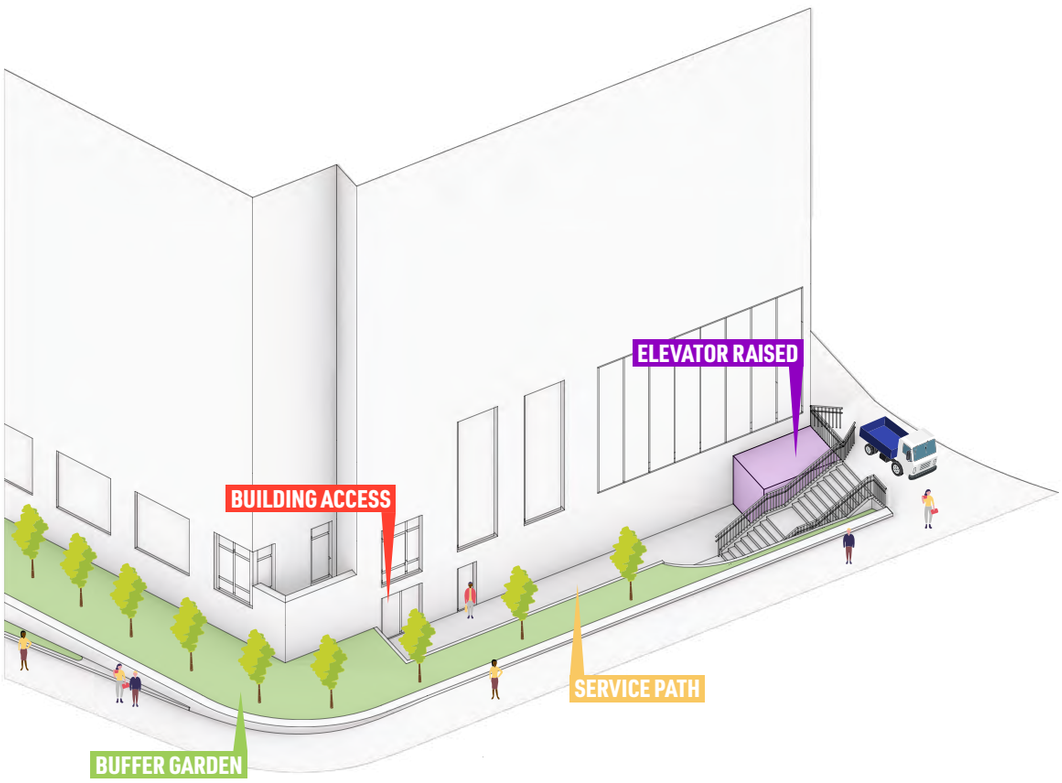
SERVICE ACCESS

Maintaining service access to the ground level of Tribeca Pointe Apartments without significant impacts to the esplanade requires the use of a service elevator. The entrance is located 8'-6" below the Design Flood Elevation, and in an area directly visible from the lobby and 1st floor apartments in the building. In order to minimize guardrails, this design offsets the stair from the walking surface by 3'-0", limiting the grade drop in this zone to under 30". The necessary gate and handrails of the service elevator are concealed by their proximity to the building, as is shown on the next page.

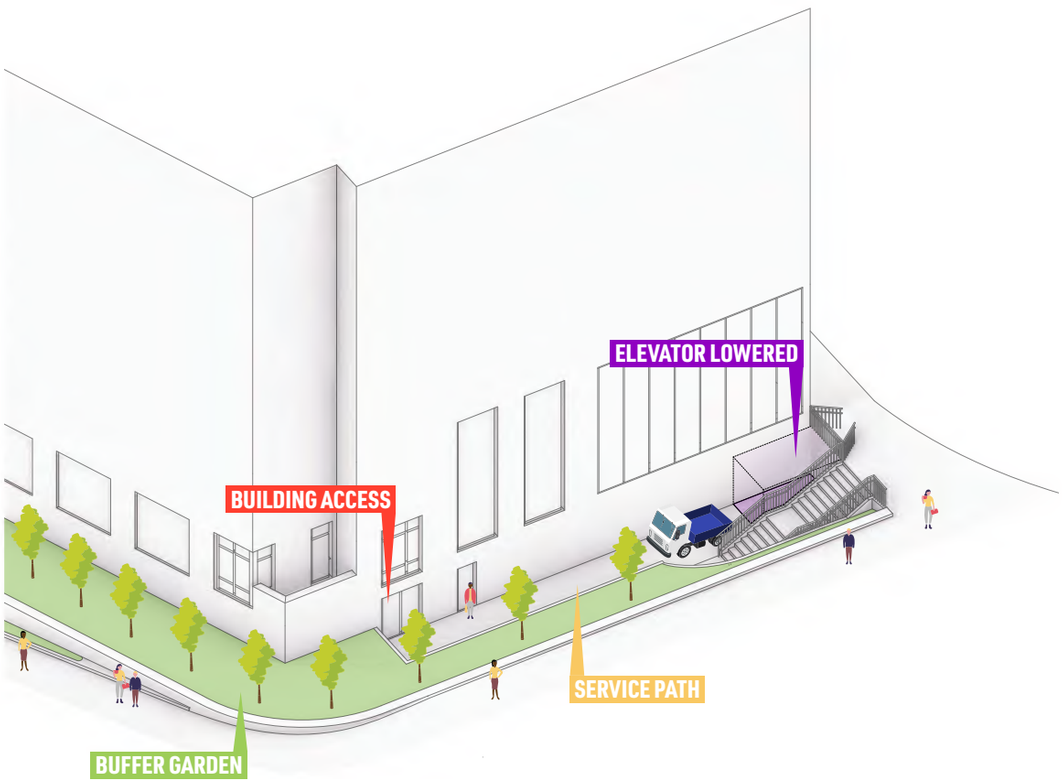


Service Access Plan





Elevator Raised

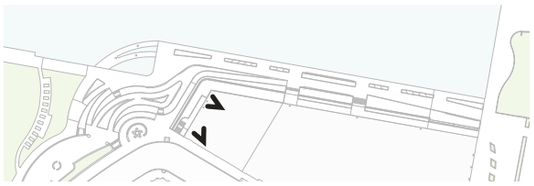


Elevator Lowered

TRIBECA POINTE VIEWS

Views from the lobby (below) and ground floor apartment window (above right) in Tribeca Pointe are maintained. Foreground planting in both views provides a privacy buffer between residents and pedestrians on the upper esplanade accessing River Terrace. Tree planting is located at the edges of the views, framing the Hudson River and skyline of Jersey City. The gate and handrail required for service access below are located at the far left, away from the primary view corridor.

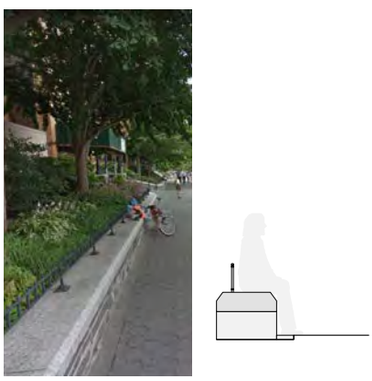
Esplanade Gardens Lobby View

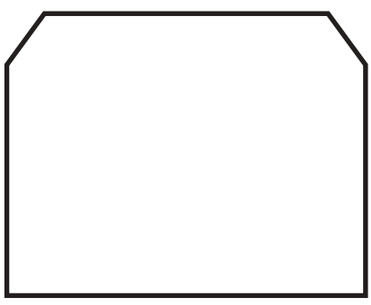


Esplanade Gardens Apartment Window View

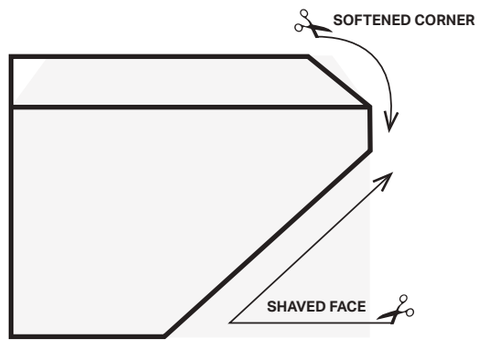
WALLS & EDGES

Inspiration for the integrated seating and benches in the Esplanade Gardens comes from the existing family of walls, edges, and curbs present in and around the project area, shown in the catalog below. These features share a common design language that is distilled and represented as the "Current NBPC Profile". This is modified to meet current seating standards and multiple iterations are integrated into the design as shown at right.

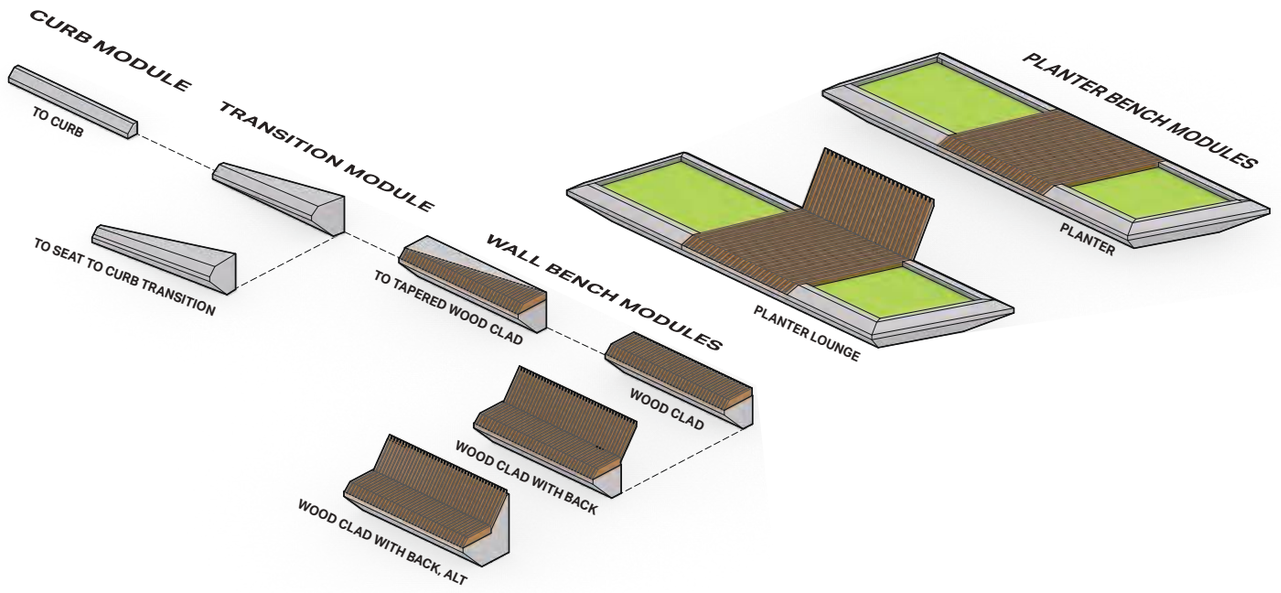




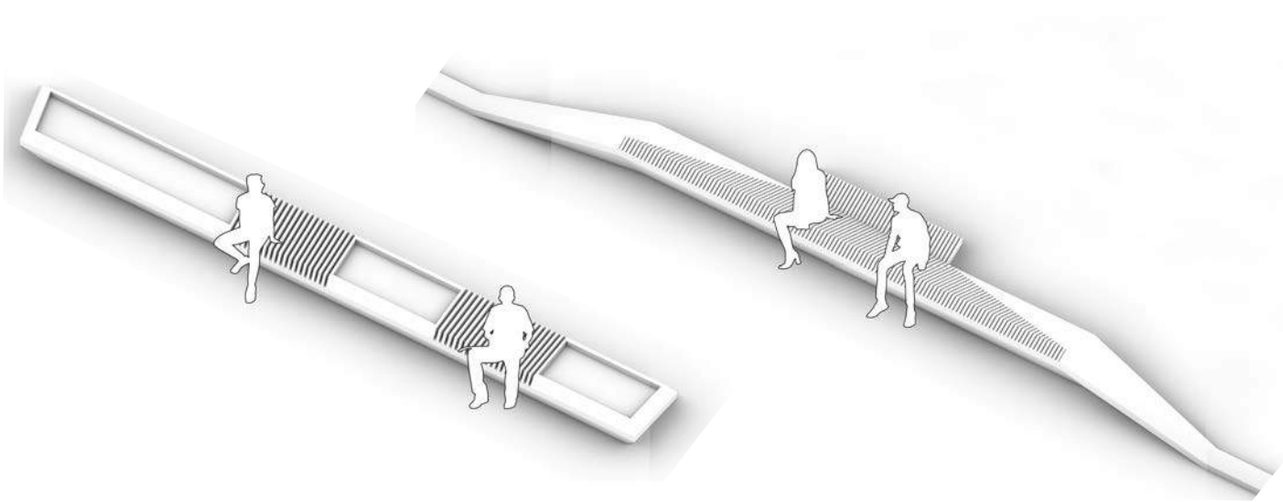
Current NBPC Profile



Proposed NBPC Profile



Module Types



Planter Benches

Wall Benches

Walls and Edges Plan

PLANTING

The planting concept for the Esplanade Gardens reflects the inherent elevation change that defines the project. This datum-based planting concept reflects the future tidal fluctuations, as well as the movement of inland rain events in the terraced planters. The datums are the Lowlands, the Meadows, and the Bluffs.

THE BLUFFS

- MIXTURE OF SHRUBS AND HERBACEOUS FLOWERING PLANTS
- FILTERS HARSH SUNLIGHT
- SHADE TOLERANT PLANTS PLANTED UNDERNEATH TREE CANOPY

THE MEADOWS

- NATIVE AND EXOTIC GRASSES AND SUN LOVING PERENNIALS
- PROPER TRANSITION FROM TREES AND SHRUBS TO MOIST TOLERANT SPECIES
- VARIETY OF COLOR

THE LOWLANDS

- MIXTURE OF SHRUBS, PERENNIALS, AND ORNAMENTAL GRASSES
- GRASSES AND SHRUBS ENHANCE VISUAL IDENTIY IN WINTER WHEN PERENNIALS DIE BACK
- SALT AND WATER TOLERANT

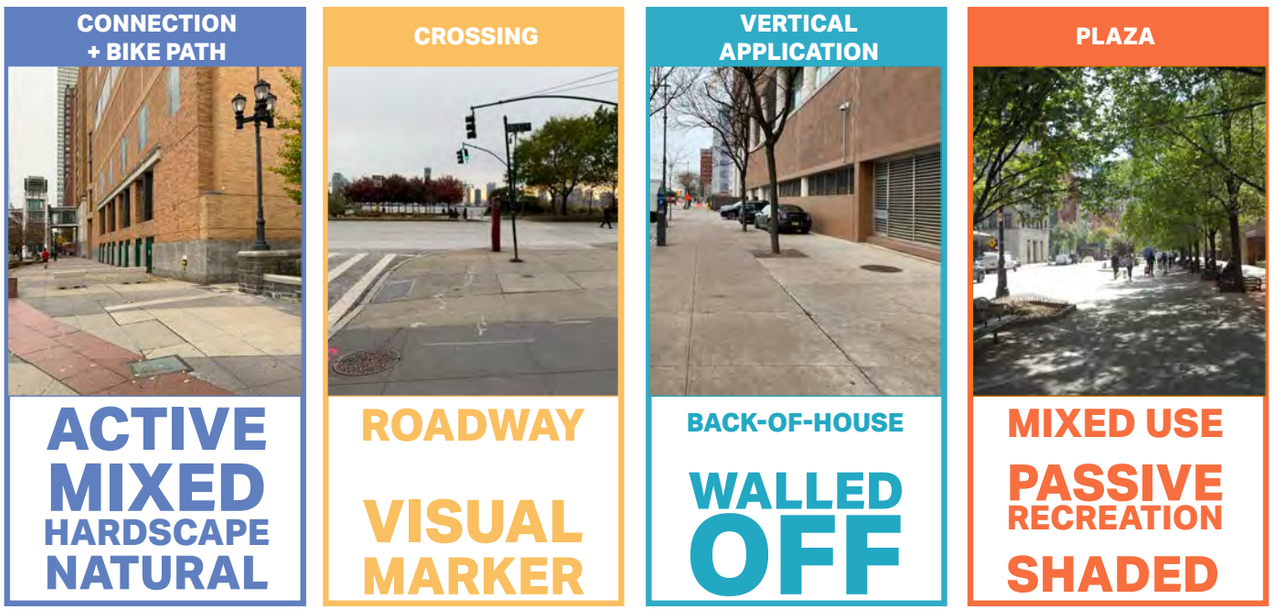
Section C

ZONE 2 CONCEPT

Zone 2 runs from the terminus of the Battery Park City Esplanade, north along Route 9A, and into the TriBeCa neighborhood to reach the high ground. This alignment travels from a more natural condition, at the esplanade, to an industrial condition inland. There are 4 sub-zones within this alignment: connection & bike path, crossings, vertical applications, and plazas. The preferred concept reflects this larger transition and each zone, while creating an identifiable language of urban landscape infrastructure.

Concept Plan



Alignment Plan

TOOLKIT

The conditions of Zone 2 change within each block, requiring a nimble integration of flood risk reduction infrastructure. This integration must respond to each specific site condition, providing either access, seating, screening, or signage opportunities depending on the needs. The toolkit below has been developed specifically for this alignment, combining programming, planting, and materiality into a woven experience along the full alignment.

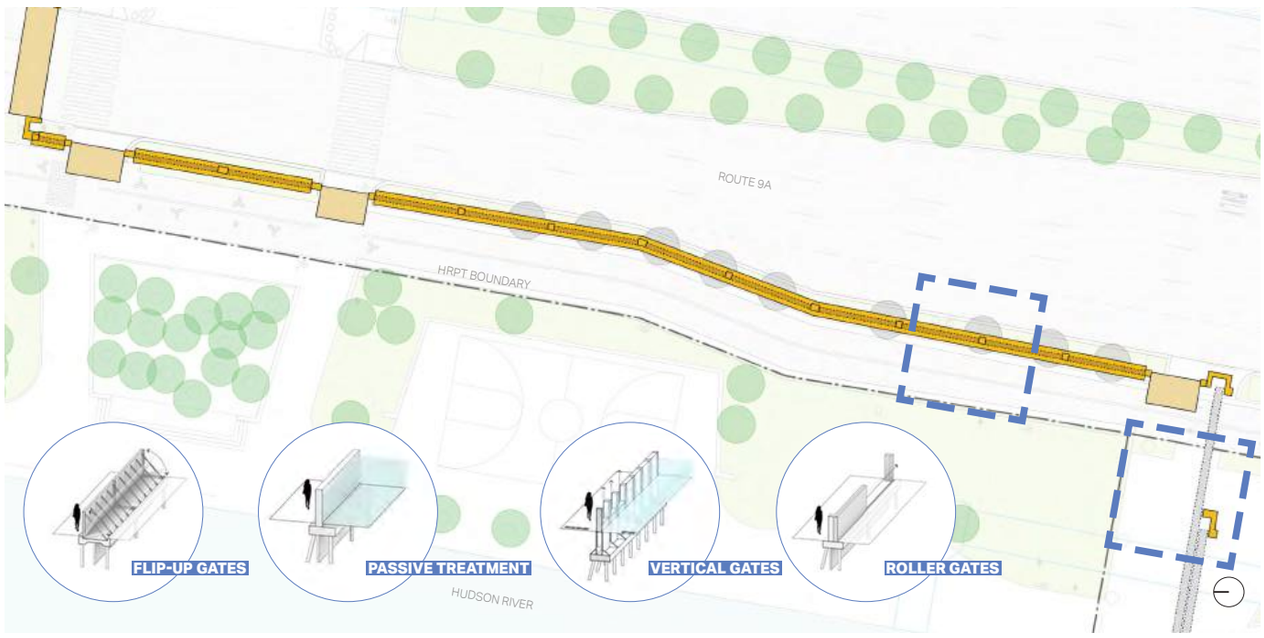
Upland Gardens

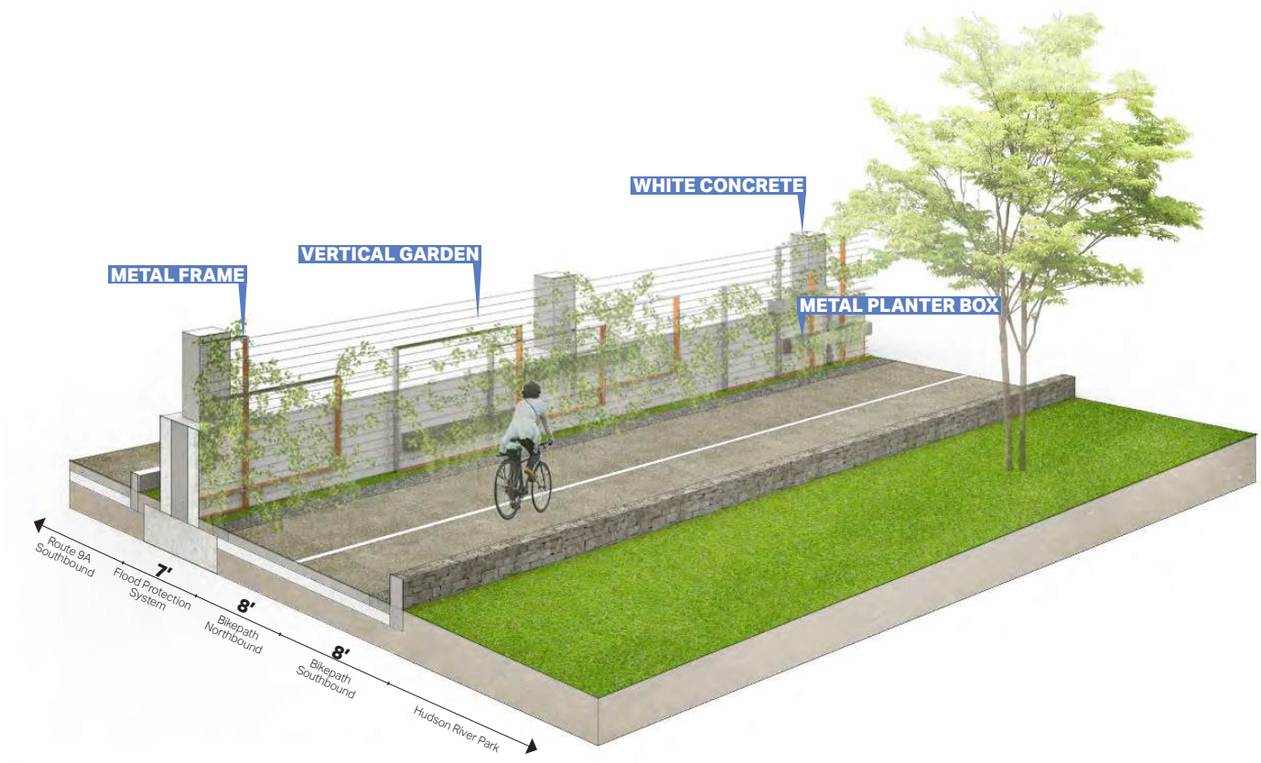
HUDSON RIVER PARK

This stretch of the alignment uses a combination of vertical and flip-up deployable barriers, establishing a buffer between the bike route and roadway. The structure uses a metal framing system compatible with the vertical movement of the gates and semi-transparent until planting is established. This introduces a more natural and softer buffer at the bike lane.



Alignment Strategy

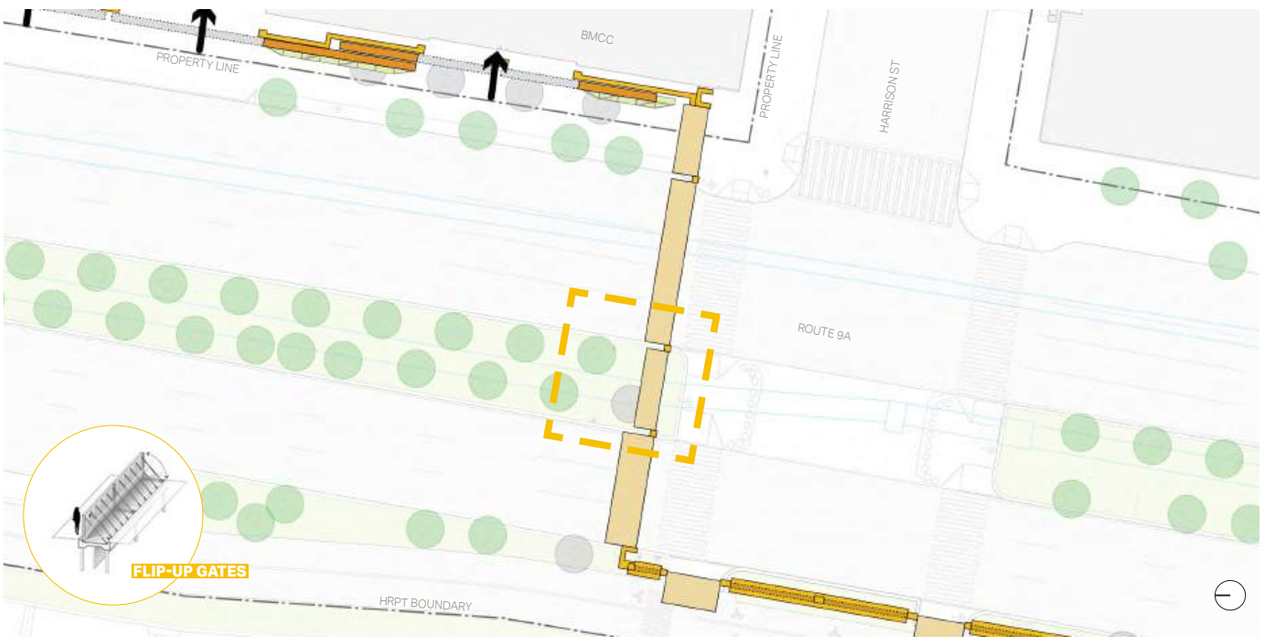
Bike Path Landscape Buffer



Design Concept

CROSSINGS

Crossing route 9A is achieved using flip-up barriers placed in the roadway, or at the median in raised foundations. The columns and raised foundation serve as a structure to continue the vertical planting screen established along the bikeway in Hudson River Park.



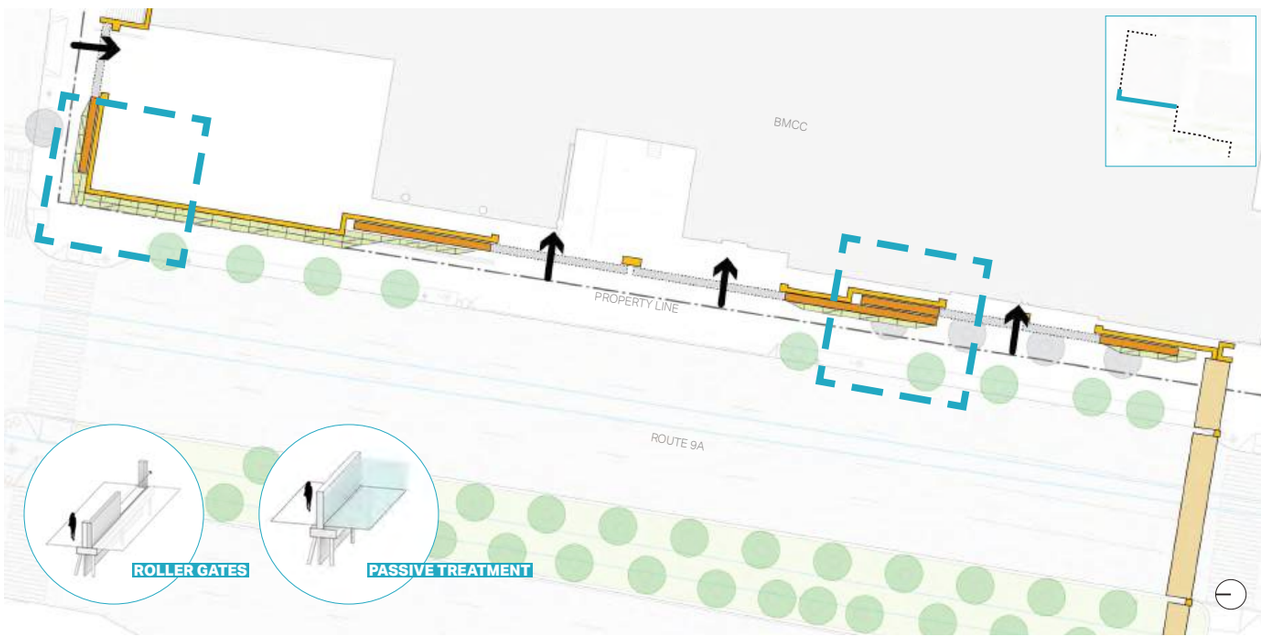
Alignment Strategy

Vertical Planting Screens

Design Concept

BMCC

The alignment adjacent to BMCC will use a combination of fixed walls and rolling deployable gates where access is required. The modular toolkit reflects the material inspiration of TriBeCa and is paired with vertical planting to screen blank walls and introduce natural features to this portion of the pedestrian right of way.



Alignment Strategy

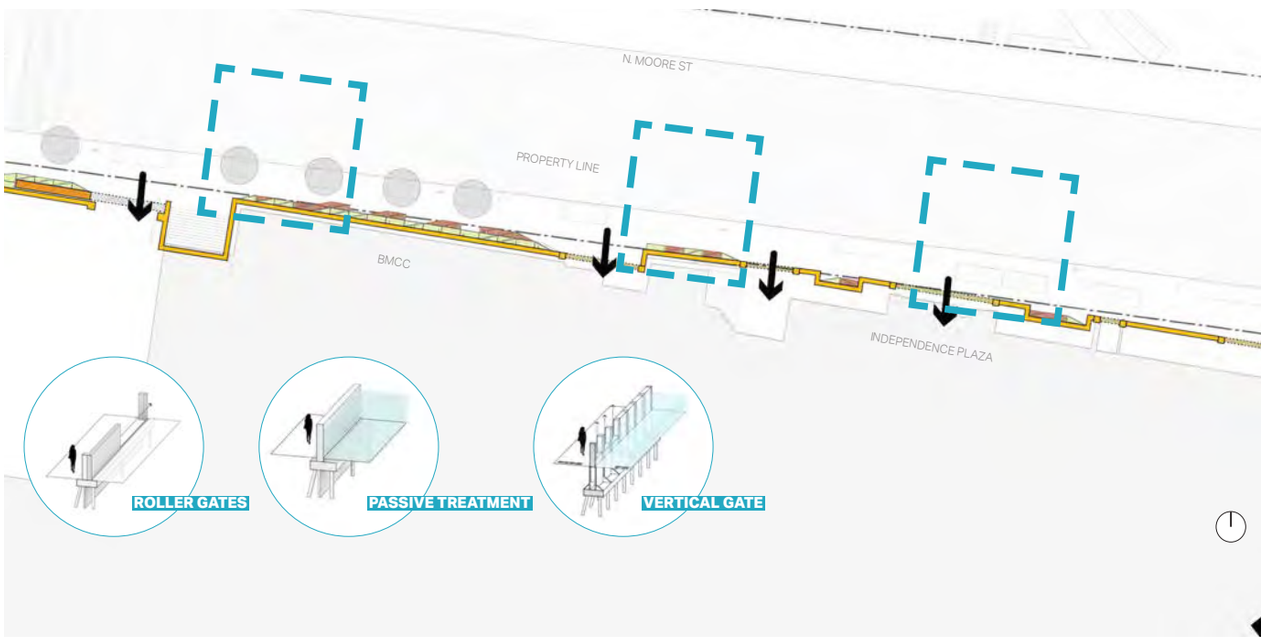
Vertical Planting Screen

Route 9A Planters

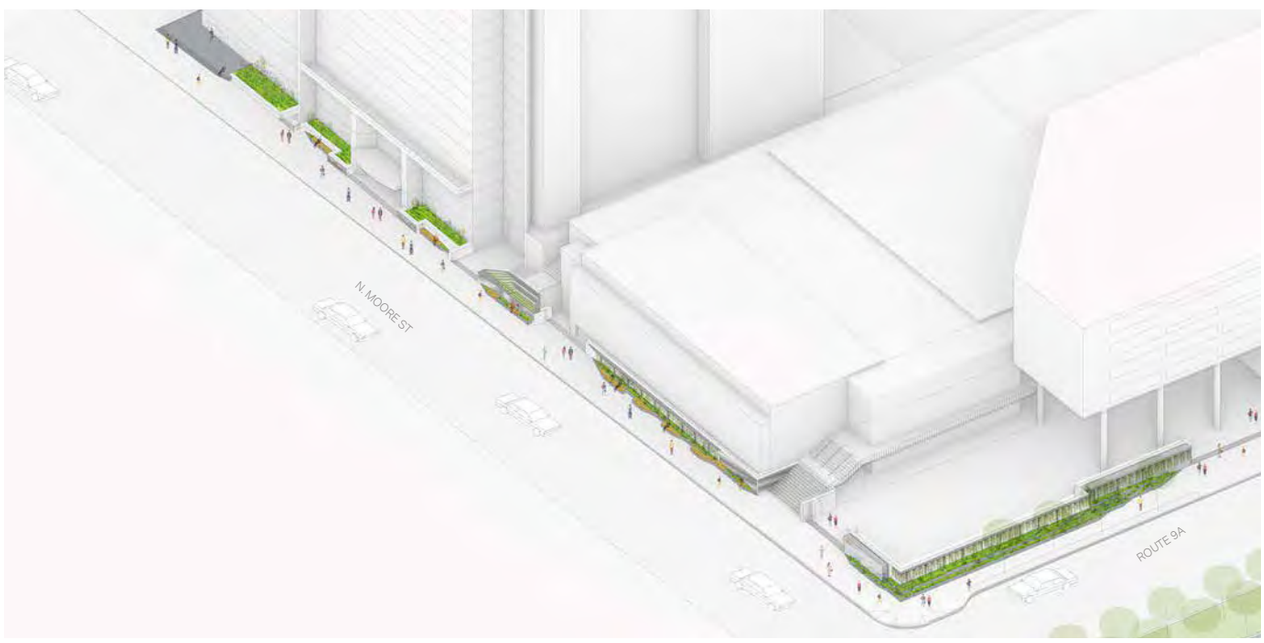
Route 9A Planter Screen

NORTH MOORE STREET

A combination of fixed walls and rolling and vertical deployables make up the flood risk reduction alignment. In some instances, existing structures such as stairs may be hardened and used as a link in the alignment. At the sidewalk benches, signage, planting, and murals are incorporated into the infrastructure, ensuring multi-functionality of the necessary additions.



Alignment Strategy



Vertical Planting Screen and Seating

This email originated outside the organization. Do not click any links or attachments unless you know the sender.

Camille,

AT&T Core has facilities within the project limits you provided for the North Battery Park Project on/near Greenwich St in Manhattan. There are AT&T fiber cables that run on Greenwich St thru your limits. However, the AT&T Core fiber cable is located in an Empire City Subway conduit system. Please contact ECS for any As-Built information.

I have attached an involvement letter for your records.

Thank you.

Subject: TC Systems, Inc. Utility Map Request for the North Battery Park Resiliency Project

Camille,

As requested, our records show TC Systems, Inc. has cable facilities located in ECS, Verizon and TC Systems, Inc. conduit within the project limits as identified below and on attachment. Please contact Verizon and ECS for details. TC Systems Inc. cable/conduit as-built prints involved are included on pages 2-11 of attachment. Any questions regarding TC Systems, Inc. cable facilities, please contact the following:

- For any and all legal documents including agreements, bid contracts, etc…, please refer all questions to Brian Kerr, OSPE Mgr @ 212-387-6681 or e-mail address: bk267n@att.com

- For all engineering project management, please refer to, on behalf of TC Systems, Inc. facilities in ALL areas of NYC & Long Island, LiRO Group an authorized TC Systems Inc contractor Bill Mohr @ 631-855-2563 or e-mail address: mohrw@liro.com

- AT&T Core cable facilities: Lou Marello, OSPE Mgr @ 914-397-3744 or e-mail address: lm5215@att.com

- Please note our updated address shown below for your records.
- TC Systems, Inc. - commonly referred as “AT&T LNS”.

Bill Lown,
Please verify if AT&T Core facilities are in or near defined project site. If already submitted, please disregard.

Bill Mohr,
Please follow-up and coordinate TC Systems, Inc. involvement as needed.

Thank you.
Ron Baroni

Subject: Utility Request for the North Battery Park Resiliency Project

Good afternoon Mr. Rich Waskewicz,

I am contacting you from Naik Consulting Group, a subconsultant of AECOM, in regards to a Utility Plate Request for the North Battery Park City Resiliency Project located in New York, New York. Attached is an authorization letter from Battery Park City Authority, and a letter from AECOM naming Naik as their subconsultant. I have also attached an aerial boundary outlining the locations where we are requesting information. The locations of interest include:

1. N. Moore St, Harrison St, Chambers St, and Warren St – all between and including West St and Greenwich St; and
2. the North Portion of Rockefeller Park.

Please refer to the attached aerial view for a graphical representation of the project boundary.

If AT&T does not have utilities within these areas, please respond to this email confirming that.

Please let me know if you have any other questions or comments.

Camille Santos ● Civil Engineer ● DD 646.604.5639

Ref: Utility Request for the North Battery Park Project on/near Greenwich St in Manhattan

To whom it may concern,

We had received the information you sent to our office in reference to the above-mentioned project. Our consultant, as well as myself, have reviewed the plans and found that AT&T Core **does** have facilities located within the limits of your project area. However, our facilities are located within an Empire City Subway conduit system. Please contact ECS for any further As-Built and Location information. AT&T LNS may also have facilities located within the project area and you should contact them in regards to this project.

If you have any questions pertaining to this matter, you may contact me at 973-927-1114 or my Consultant, Lynn Utilities Services, attn. William Lown at 845-463-2733.

Sincerely,

Louis J. Marello
OSP- Engineer- Field Operations

Subject: Utility Request for the North Battery Park Resiliency Project

[External Email]
Good afternoon Mr. Elbio Aleman,

I am contacting you from Naik Consulting Group, a subconsultant of AECOM, in regards to a Utility Plate Request for the North Battery Park City Resiliency Project located in New York, New York. Attached is an authorization letter from Battery Park City Authority, and a letter from AECOM naming Naik as their subconsultant. I have also attached an aerial boundary outlining the locations where we are requesting information. The locations of interest include:

1. N. Moore St, Harrison St, Chambers St, and Warren St – all between and including West St and Greenwich St; and
2. the North Portion of Rockefeller Park.

Please refer to the attached aerial view for a graphical representation of the project boundary.

If Cablevision does not have utilities within these areas, please respond to this email confirming that.

Please let me know if you have any other questions or comments.

Nick:
Thanks for providing our subconsultant, Naik Group, with FDNY records with your below 11-12-2019 email. We received Maps 07 and 01B (attached).

We appear to be missing information for Fire Alarm boxes that we've observed along the sidewalk of West Street at Chambers Street, and roughly 250' north of Chambers St. at the entrance to Borough of Manhattan Community College theaters. Map 1B shows this vicinity, but it doesn't show information for these boxes. Sheet No. 7 shows Fire Alarm conduits along the West Street sidewalk farther north, near Harrison Street. Unfortunately we do not have Sheet No. 6, which matches sheet 7 to the south. Please share with us Sheet No. 6.

Happy holidays!

Subject: Utility Request for the North Battery Park Resiliency Project

Good afternoon Mr. Nicholas Varone,

I am contacting you from Naik Consulting Group, a subconsultant of AECOM, in regards to a Utility Plate Request for the North Battery Park City Resiliency Project located in New York, New York. Attached is an authorization letter from Battery Park City Authority, and a letter from AECOM naming Naik as their subconsultant. I have also attached an aerial boundary outlining the locations where we are requesting information. The locations of interest include:

1. N. Moore St, Harrison St, Chambers St, and Warren St – all between and including West St and Greenwich St; and
2. the North Portion of Rockefeller Park.

Please refer to the attached aerial view for a graphical representation of the project boundary.

If FDNY does not have utilities within these areas, please respond to this email confirming that.

Please let me know if you have any other questions or comments.

Mr. Ghanshyam Patel
NYC Dept. of Transportation
Division of Street Lighting
55 Water Street
New York, NY 10041

Dear Mr. Patel:

AECOM is providing design services for the Battery Park City Authority with respect to the North Battery Park City Resiliency Project, which includes designing a flood resiliency system in Lower Manhattan. The exact locations of proposed construction are to be determined. Our Area of Interest, which is indicated on the attached map, includes the following streets.

- N. Moore Street from West Street to Hudson Street
- Harrison Street from West Street to Hudson Street
- Chambers Street from River Terrace to Hudson Street
- West St. (Route 9A) from Warren Street to N. Moore Street

- Greenwich Street from Chambers Street to N. Moore Street
- River Terrace from Warren Street to Chambers Street

For our use in understanding existing conditions, we request record drawings for street lighting facilities within the Area of Interest.

An authorization letter from our client PO contact, Debbie Addison [212-417-2269] is attached. Thank you for your assistance!

Mr. Foster,

Attached are the drawings (10) of the signalized intersections within the area of interest. We don't have drawings for intersections that are not signalized.
Also, these drawings may not show the accurate existing conditions so actual verification in the field is recommended.

Regards,
Teodenio Valite

Subject: NBPC Resiliency: Request for Information

Mr. Michael LeFosse
NYC Dept. of Transportation
Bureau of Traffic Signals
55 Water Street
New York, NY 10041

Dear Mr. LeFosse:
AECOM is providing design services for the Battery Park City Authority with respect to the North Battery Park City Resiliency Project, which includes designing a flood resiliency system in Lower Manhattan. The exact locations of proposed construction are to be determined. Our Area of Interest, which is indicated on the attached map, includes the following streets.

- N. Moore Street from West Street to Hudson Street
- Harrison Street from West Street to Hudson Street
- Chambers Street from River Terrace to Hudson Street
- West St. (Route 9A) from Warren Street to N. Moore Street
- Greenwich Street from Chambers Street to N. Moore Street
- River Terrace from Warren Street to Chambers Street
-

For our use in understanding existing conditions, we request record drawings for traffic signal facilities within the Area of Interest.

An authorization letter from our client PO contact, Debbie Addison [212-417-2269] is attached. Thank you for your assistance!

Mark S. Foster, P.E.
AECOM
605 Third Ave.
New York, NY 10158
direct 212-973-3169
cell 203-984-5172

Categories: NBPC

Thank you for the quick response. The tap cards have been researched and the available information will be sent to you via CRM. In regards to any available map/drawing information in addition to the original submission by Mr. Foster all available records were sent, there is no additional information. If new locations have been added to the project a new request for only those locations is to be submitted. In addition to the request form we require a detailed letter from the retaining agency stating your firm's task and contract number. A site map is also required.

Subject: RE: Record Request denied BWSO0089002074

Hi Vincent,

Thank you for providing clarification. I have attached an updated records request form and an accompanying excel spreadsheet (as requested for tap card requests). Please note, the records request forms RCU36225, RCU38691, and RCU48615 are for other resiliency projects at different locations worked on by AECOM. My request is however a follow up to record request RCU48027 (same project) submitted by Mark Foster and will not need any documentation that we have already received. Please let me know if there is any additional information or clarification needed from our office.

Regards,
Aali Ladak

DIVISION OF SEWER DESIGN

MODIFIED DRAINAGE PLAN

SHOWING LOCATION, SIZES AND GRADES OF SEWERS IN

SEWERAGE DISTRICT No 21-AG

BATTERY PARK CITY AREA - MANHATTAN

This Plan was prepared by the Commissioner of the Department of Water Resources under Section 683 of the New York City Charter.

DATED; NEW YORK OCTOBER 5, 1971 SCALE 1 INCH = 150 FT.

CHIEF, DRAINAGE SECTION 10-5-71 PE

DIRECTOR BUREAU OF WATER POLLUTION CONTROL ASSISTANT COMMISSIONER PE

COMMISSIONER OF WATER RESOURCES 10-12-71 PE

APPROVED FOR THE DEPARTMENT OF HEALTH
DATED; NEW YORK 5-5-72
DIRECTOR, BUREAU OF SANITARY ENGINEERING FOR THE COMMISSIONER OF HEALTH

APPROVED FOR THE DIRECTOR OF CITY PLANNING
DATED; NEW YORK 4/19/72
DIRECTOR OF CITY PLANNING

NOTES

The sewers shown on this drainage plan are intended to have a capacity adequate to the reasonable needs of the drainage district for a limited period and are not intended to be of sufficient capacity to immediately remove storm water when the rate of precipitation exceeds an intensity of "R" inches per hour, continuing through "T" minutes "C" per cent of which will reach the sewers within that time. The capacity of the system has been restricted for the purpose of keeping the cost within limits which it is deemed economically reasonable.

The elevations shown on this map refer to Manhattan Datum plane which is 2.75 feet above the U. S. Coast & Geodetic Survey Datum at Sandy Hook.

The City of New York will not be responsible for damage by surcharging in any case in which the invert elevation of the house connection at the curb line is less than the hydraulic grade of any sewer through which it outlets.

Where concrete sewers are to be constructed on a gradient such that velocities exceeding ten feet per second will occur, the invert shall be lined with a material whose resistance to erosion is greater than that of concrete.

The City of New York assumes no liability for damage due to surcharging of "BUILT SEWERS HEREWITH ESTABLISHED" which may occur before the outlet sewers established by this drainage plan have been built.

NO SANITARY CONNECTIONS WILL BE PERMITTED INTO THE SEWER OUTLETS DOWNSTREAM OF THE INTERCEPTOR REGULATORS.

AMENDED DRAINAGE PLAN

21 AL

SHOWING LOCATION, SIZES AND GRADES OF SEWERS IN

BATTERY PARK CITY

NEIGHBORHOOD I & II

This Plan was prepared by the Commissioner of the Department of Water Resources under Section 683 of the New York City Charter .

DATED: NEW YORK JULY 6, 1976 **SCALE:** 1 INCH = 100 FT.

APPROVED FOR THE DEPARTMENT OF WATER RESOURCES	APPROVED FOR THE DEPARTMENT OF HEALTH
Philip Lowentus P.E. 7/7/76	P.E. DATE
CHIEF, DRAINAGE SECTION DATE	DIRECTOR, BUREAU OF SANITARY ENGINEERING FOR THE COMMISSIONER OF HEALTH
Joseph F. Miller P.E. 7/7/76	APPROVED FOR THE DIRECTOR OF CITY PLANNING
ASSISTANT COMMISSIONER DIRECTION, BUREAU OF WATER POLLUTION CONTROL DATE	
Charles Sinnett P.E. 7-7-76	P.E. DATE
COMMISSIONER OF WATER RESOURCES DATE	DIRECTOR OF CITY PLANNING DATE

NOTES

THE SEWERS SHOWN ON THIS DRAINAGE PLAN ARE INTENDED TO HAVE A CAPACITY ADEQUATE TO THE REASONABLE NEEDS OF THE DRAINAGE DISTRICT FOR A LIMITED PERIOD AND ARE NOT INTENDED TO BE OF SUFFICIENT CAPACITY TO IMMEDIATELY REMOVE STORM WATER WHEN THE RATE OF PRECIPITATION EXCEEDS AN INTENSITY OF "R" INCHES PER HOUR CONTINUING THROUGH "T" MINUTES "C" PERCENT OF WHICH WILL REACH THE SEWERS WITHIN THAT TIME. THE CAPACITY OF THE SYSTEM HAS BEEN RESTRICTED FOR THE PURPOSE OF KEEPING THE COST WITHIN LIMITS WHICH ARE DEEMED ECONOMICALLY REASONABLE.

THE CITY OF NEW YORK WILL NOT BE RESPONSIBLE FOR DAMAGE DUE TO SURCHARGING IN ANY CASE IN WHICH THE INVERT ELEVATION OF THE HOUSE CONNECTION AT THE CURB LINE IS LESS THAN THE HYDRAULIC GRADE OF ANY SEWER THROUGH WHICH IT OUTLETS.

THE CITY OF NEW YORK ASSUMES NO LIABILITY FOR DAMAGE DUE TO SURCHARGING OF "BUILT SEWERS PREVIOUSLY AND HEREWITH ESTABLISHED" WHICH MAY OCCUR BEFORE THE FUTURE ESTABLISHED OUTLET SEWERS, DESIGNED ON THE BASIS OF ESTABLISHED ZONING, HAVE BEEN BUILT. UNTIL THE FUTURE OUTLET SEWERS ARE ESTABLISHED AND BUILT, THE ALLOWABLE FLOWS INTO THE "HEREWITH ESTABLISHED SEWERS" ARE LIMITED TO THE FLOW VALUES WHICH THE EXISTING OUTLET SEWERS WERE DESIGNED TO ACCEPT.

THE ELEVATIONS SHOWN ON THIS MAP REFER TO B.P.M. SEWER DATUM PLANE WHICH IS 2.75 FEET ABOVE MEAN SEA LEVEL AS ESTABLISHED BY THE UNITED STATES COAST AND GEODETIC SURVEY AT SANDY HOOK, NEW JERSEY

NOTES

THE SEWERS SHOWN ON THIS DRAINAGE PLAN ARE INTENDED TO HAVE A CAPACITY ADEQUATE TO THE REASONABLE NEEDS OF THE DRAINAGE DISTRICT FOR A LIMITED PERIOD AND ARE NOT INTENDED TO BE OF SUFFICIENT CAPACITY TO IMMEDIATELY REMOVE STORM WATER WHEN THE RATE OF PRECIPITATION EXCEEDS AN INTENSITY OF "R" INCHES PER HOUR CONTINUING THROUGH "T" MINUTES "C" PERCENT OF WHICH WILL REACH THE SEWERS WITHIN THAT TIME. THE CAPACITY OF THE SYSTEM HAS BEEN RESTRICTED FOR THE PURPOSE OF KEEPING THE COST WITHIN LIMITS WHICH ARE DEEMED ECONOMICALLY REASONABLE.

THE CITY OF NEW YORK WILL NOT BE RESPONSIBLE FOR DAMAGE BY SURCHARGING IN ANY CASE IN WHICH THE INVERT ELEVATION OF THE HOUSE CONNECTION AT THE CURB LINE IS LESS THAN THE HYDRAULIC GRADE OF ANY SEWER THROUGH WHICH IT OUTLETS.

THE CITY OF NEW YORK ASSUMES NO LIABILITY FOR DAMAGE DUE TO SURCHARGING OF "BUILT SEWERS PREVIOUSLY AND HEREWITH ESTABLISHED" WHICH MAY OCCUR BEFORE THE FUTURE ESTABLISHED OUTLET SEWERS, DESIGNED ON THE BASIS OF ESTABLISHED ZONING HAVE BEEN BUILT, UNTIL THE FUTURE OUTLET SEWERS ARE ESTABLISHED AND BUILT, THE ALLOWABLE FLOWS INTO THE "HEREWITH ESTABLISHED SEWERS" ARE LIMITED TO THE FLOW VALUES WHICH THE EXISTING OUTLET SEWERS WERE DESIGNED TO ACCEPT.

THE ELEVATIONS SHOWN ON THIS MAP REFER TO MANHATTAN SEWER DATUM PLANE WHICH IS +2.78 FEET ABOVE MEAN SEA LEVEL AS ESTABLISHED BY THE UNITED STATES COAST AND GEODETIC SURVEY AT SANDY HOOK, NEW JERSEY.

DIRECTOR OF CITY PLANNING ..... 5-14-76 DATE

NOTES

THE SEWERS SHOWN ON THIS DRAINAGE PLAN ARE INTENDED TO HAVE A CAPACITY ADEQUATE TO THE REASONABLE NEEDS OF THE DRAINAGE DISTRICT FOR A LIMITED PERIOD AND ARE NOT INTENDED TO BE OF SUFFICIENT CAPACITY TO IMMEDIATELY REMOVE STORM WATER WHEN THE RATE OF PRECIPITATION EXCEEDS AN INTENSITY OF "R" INCHES PER HOUR CONTINUING THROUGH "T" MINUTES "C" PERCENT OF WHICH WILL REACH THE SEWERS WITHIN THAT TIME. THE CAPACITY OF THE SYSTEM HAS BEEN RESTRICTED FOR THE PURPOSE OF KEEPING THE COST WITHIN LIMITS WHICH ARE DEEMED ECONOMICALLY REASONABLE.

THE CITY OF NEW YORK WILL NOT BE RESPONSIBLE FOR DAMAGE BY SURCHARGING IN ANY CASE IN WHICH THE INVERT ELEVATION OF THE HOUSE CONNECTION AT THE CURB LINE IS LESS THAN THE HYDRAULIC GRADE OF ANY SEWER THROUGH WHICH IT OUTLETS.

THE CITY OF NEW YORK ASSUMES NO LIABILITY FOR DAMAGE DUE TO SURCHARGING OF "BUILT SEWERS PREVIOUSLY AND HEREWITH ESTABLISHED" WHICH MAY OCCUR BEFORE THE FUTURE ESTABLISHED OUTLET SEWERS, DESIGNED ON THE BASIS OF ESTABLISHED ZONING HAVE BEEN BUILT. UNTIL THE FUTURE OUTLET SEWERS ARE ESTABLISHED AND BUILT, THE ALLOWABLE FLOWS INTO THE "HEREWITH ESTABLISHED SEWERS" ARE LIMITED TO THE FLOW VALUES WHICH THE EXISTING OUTLET SEWERS WERE DESIGNED TO ACCEPT.

THE ELEVATIONS SHOWN ON THIS MAP REFER TO MANHATTAN SEWER DATUM PLANE WHICH IS 2.75 FEET ABOVE MEAN SEA LEVEL AS ESTABLISHED BY THE UNITED STATES COAST AND GEODETIC SURVEY AT SANDY HOOK, NEW JERSEY.

NOTES: 1. THE TRAP ELEVATIONS OF ALL THE HOUSE CONNECTIONS TO THE EXISTING (8'-3"W x 5'-0"H) COMBINED SEWER IN THE ±20' WIDE SEWER EASEMENT FROM GREENWICH STREET TO WEST STREET SHOULD NOT BE LOWER THAN +8.00 AT THE INTERSECTION OF GREENWICH STREET AND THE ±20' WIDE SEWER EASEMENT AND NOT LOWER THAN +6.00 AT THE UPSTREAM END OF THE REGULATOR. ANY VALUE IN BETWEEN SHOULD BE LINEARLY INTERPOLATED.

2. THIS DRAINAGE PLAN SUPERSEDES DRAINAGE PLAN NO. 23-V.

Matrix Staff and Environmental Professional Qualifications/Resumes

STEPHANIE ROSENBERG, P.G.
Associate Project Manager
Matrix New World Engineering

Professional Qualifications

Stephanie Rosenberg has more than eight years of experience as a hydrogeologist and GIS specialist, with more than seven years dedicated to the environmental consulting industry. She is experienced in performing environmental site assessments, contaminant delineation, soil classification, monitoring well installation, spill and tank closures, and sampling of various media. Ms. Rosenberg is experienced in database design and management, map creation, and providing expert environmental evaluations for litigation support related to groundwater contaminant plume migration. She has been involved with site activities and project planning and coordination for soil, groundwater, and vapor intrusion sampling programs associated with site assessment and remediation. Ms. Rosenberg has performed, overseen, and coordinated remedial and investigative projects on behalf of both public and private entities for industrial and commercial facilities, educational establishments, proposed residential development, and public works facilities. Her report preparation expertise includes Phase I and Phase II Environmental Site Assessments (ESAs); and spill closure, site characterization, remedial closure, routine monitoring, and other reports related to environmental investigation, remediation, and delineation activities. Ms. Rosenberg's spill closure and remediation experience includes projects for the New York State Spill Response Program, United States Environmental Protection Agency (USEPA) Superfund sites, and New York City E-Designated sites.

Education

MS, Hydrogeology, Stony Brook University, 2013
BA, Environmental Studies, Biology Minor, SUNY Purchase College, 2010

Professional Experience

MTA MNR Substation Replacement, Harrison & Mamaroneck, NY – Prepared Phase I ESAs to support Metro North Railroad's (MNR's) proposed work to replace two AC traction power substations with new prefabricated walk in substations. The proposed work would improve the power supply capacity and resiliency of the power supply system with energy efficient upgrades on the New York State portion of the New Haven Line, and would be constructed to provide maximum safe operation with increased sustainability, resiliency, and service reliability in case of substation outages. In addition, Ms. Rosenberg reviewed the Subsurface Investigation Report, and prepared GIS figures to support the report.

DASNY Dynamic Youth Community Center, Brooklyn, NY – Ms. Rosenberg performed a subslab soil vapor investigation in the building's cellar. Subslab soil vapor points were advanced through the concrete floor using a hammer drill, and temporary soil gas sampling points were installed below the slab. Leak tests were performed prior to sampling, and samples were collected in laboratory 6-liter Summa cannisters at a flow rate not exceeding 0.2 liters per minute. Ms. Rosenberg helped prepare summaries of the report and the results as part of the subsurface investigation report.

NYC Parks Design Services for the Rehabilitation of Bronx Zoo, Double Dabs Project, Bronx, NY – Ms. Rosenberg performed sediment sampling to support the design services for the rehabilitation of the Double Dams in the Bronx River, located at the Bronx Zoo. Pre-determined sample locations were accessed by boat. Samplers cores were collected at each sample location, collecting between 2 to 8 feet of stream sediment. Sample locations were logged using a portable global positioning system unit. Sediment, stratification, and other notable observations were logged, and samples were collected for laboratory analysis. Ms. Rosenberg prepared a summary of sampling activities.

PANYNJ LaGuardia Airport Access Improvement Project, Corona, NY – Prepared Phase I ESAs for multi-lot properties in Corona, Queens, New York. The LaGuardia Airport (LGA) Access project involved the construction of a new automated people mover (APM) system to provide access to LGA through the Long Island Rail Road (LIRR). Ms. Rosenberg performed site inspections of all enabling project boundaries and prepared Phase I ESA reports. She also developed a sampling plan for Phase II ESA to support the proposed construction of the LGA APM through the Proposed Route, which included the installation of both soil borings and temporary well points, collecting both soil and groundwater samples to characterize materials encountered during construction. Ms. Rosenberg planned and Phase II ESA sampling activities between municipalities, subcontractors, and field staff. Ms. Rosenberg assisted in performing the Phase II sampling activities and prepared the Phase II ESA report summarizing the field activities and analytical results. Ms. Rosenberg assisted in preparing the Affected Environmental/Environmental Consequences chapter of the Environmental Impact Statement.

STEPHANIE ROSENBERG, P.G.
Associate Project Manager
Matrix New World Engineering

NYCDEP Canal Street Pump Station, New York, NY – Assisted in preparing a Phase I ESA for the NYCDEP Canal Street Pumping Station located in a sewer easement, an open space easement, and the right-of-way owned by New York City Department of Transportation (NYCDOT). Ms. Rosenberg performed a site inspection at the Site and evaluated the presence of recognized environmental conditions from field observations and available environmental records. She managed the preparation of the Phase I report, and developed relevant figures and maps to supplement the report.

NYCDEP Bronx River Long Term Control Plan, Bronx, NY – Phase I ESAs were prepared for 3 areas to support the proposed construction of the Combined Sewer Overflow (CSO) Long Term Control Plan. This project proposed installation of sewer lines at two locations to provide hydraulic relief for the CSO, and the installation of floatables control at a third location. Ms. Rosenberg assisted in preparing the Phase I ESA reports evaluating recognized environmental conditions at the Sites, and prepared the Sampling Analysis Plan for the associated Phase II ESA.

Penn Station Access Project, Bronx, NY – Performed field geologist and project management activities in support of the MTA C&D's design portion of the Penn Station Access Project. The Project proposes construction of new ADA-accessible transportation options to underserved areas in the East Bronx through Queens, and to New York Penn Station. Ms. Rosenberg was responsible for collecting soil and groundwater samples and performing environmental screening at combined geotechnical/environmental borings. Ms. Rosenberg oversaw drilling activities and the installation and removal of temporary monitoring well locations. Ms. Rosenberg also helped prepare the final subsurface investigation report and assisted in the preparation of construction specs and design documents.

New York City Parks Bridge Park South Multi-Use Pathway, Bronx, NY – Managed the Phase I ESA and Phase II Environmental Site Investigation (ESI) to support the NYC Parks proposed project to construct a new waterfront park and multi-use pathway south of the existing Bridge Park, in Bronx, New York. Ms. Rosenberg performed Site inspections and coordinated report preparation and field activities for a subsurface investigation. Ms. Rosenberg also managed the preparation of a Remedial Construction Plan and a Construction Health and Safety Plan for this project. All field activities and reporting were performed to support the preparation of an Environmental Assessment for the project, and all activities were conducted in accordance with the National Environmental Policy Act (NEPA)the State Environmental Quality Review Act (SEQRA), and the City Environmental Quality Review (CEQR) Technical Manual.

NYCDEP Honk Falls Dam Design, Napanoch, NY – Managed the preparation of Phase I ESAs to support the NYCDEP's proposed work to either upgrade or decommission the Honk Falls Dam. Phase I ESAs were prepared for 10 properties encompassing and adjoining the dam. Ms. Rosenberg coordinated the site investigation activities and managed the preparation of Phase I ESA reports evaluating recognized environmental conditions at the Sites.

NYCEDC Lower Concourse Park, Bronx, NY – Prepared a Phase I ESA for a multi-lot property in Bronx, New York to support the NYCEDC's planned development of a park. Ms. Rosenberg performed site inspections at the properties and evaluated the presence of recognized environmental conditions at the Site from on-site observations and available environmental records. She prepared the Phase I report, and developed sampling maps for the proposed Phase II ESI.

NYCDEP Owl's Head Wastewater Treatment Plant, Brooklyn, NY – Geologist providing environmental engineering support for the New York City (NYC) Wastewater Resiliency Program at the Owl's Head Wastewater Treatment Plant, to characterize soil in the project areas to ensure proper handling and/or disposal of these materials during construction, and to provide for proper worker health and safety. Ms. Rosenberg oversaw the advancement of soil borings using hand tools, including hand augers and post hole diggers, and hand tools, including jackhammers and concrete saws, to break through surface materials at soil boring locations. She screened and classified soils at each location to the proposed excavation depths, and collected environmental soil samples and waste characterization samples for laboratory analysis. Ms. Rosenberg prepared the Subsurface Investigation Report to summarize field activities, observations, and laboratory analytical results.

STEPHANIE ROSENBERG, P.G.
Associate Project Manager
Matrix New World Engineering

Citywide Ferry Service Projects, Bronx and Brooklyn, NY – Geologist providing environmental engineering support for the Citywide Ferry Service (CFS), which will construct new ferry landings around New York City. Ms. Rosenberg's responsibilities included the collection of soil and groundwater samples and performing environmental screening at proposed construction locations at Ferry Point Park, located in Bronx, New York, and at the South Williamsburg Ferry Landing, located in Brooklyn, New York. She oversaw the installation of soil boring locations using direct push technologies and the installation and removal of temporary monitoring well locations, evaluated environmental data, and prepared Phase II ESA reports.

Spill Closures at DASNY Facilities, New York, NY – Geologist and project manager for two spills at DASNY facilities. Both projects involved fuel oil discharging from underground storage tanks piping by being damaged during unrelated excavation activities. In both cases, a New York State Department of Environmental Conservation (NYSDEC) spill number was assigned. Ms. Rosenberg helped to coordinate the spill remediation effort and the disposal activities, evaluated analytical data, prepared spill summary letter reports for DASNY, and prepared reports for the NYSDEC recommending closure of the spill numbers.

NYCDEP BEPA GIS Impervious Area Based Parcel Data, New York, NY – GIS technician responsible for developing a training program to be utilized by NYCDEP Bureau of Environmental Planning and Analysis (BEPA) staff. Matrix worked as a subconsultant to assist in development of a GIS database of parcel-based impervious area throughout New York City. Matrix performed a data gap analysis, reviewed data quality, and assisted in GIS data management. Ms. Rosenberg helped to prepare a step-by-step training program for the average GIS database user explaining how to access, interpret, and view available data; as well as how to perform various GIS queries and analyses relevant to the data available.

ConEdison Substation Spill Monitoring and Management, Brooklyn, NY – Project manager responsible for the monitoring and management of multiple spills located at two electrical substations. Ms. Rosenberg coordinated field staff to perform monthly product monitoring and product recovery from Site monitoring wells, and she evaluated the effectiveness of treatment options over time. Ms. Rosenberg prepared monthly and quarterly monitoring reports on behalf of the client for the NYSDEC. Ms. Rosenberg also evaluated the need for additional subsurface investigation activities at the Sites.

NYSDEC Site Characterization Study, Kingston, NY – Project manager NYSDEC project investigating the property as a possible source for a PCE groundwater plume. Ms. Rosenberg coordinated soil borings, monitoring well installation and sampling activities. Soil borings were installed via direct-push drilling methods, and were classified, screened, and sampled at various depths. Groundwater samples were collected at discrete depths from temporary well points and from monitoring wells installed during field activities. Sub-slab vapor samples and exterior soil vapor samples were collected. Ms. Rosenberg evaluated analytical results to properly classify the environmental and public health threat at the Site. She prepared a Site Characterization Report for the NYSDEC and evaluated the potential for additional vapor intrusion and groundwater investigations to be addressed in a future Remedial Investigation/Feasibility Study (RI/FS).

Columbia-Manhattanville Phase II Development, New York, NY – Environmental consultant for the remediation phase of a New York City E-Designated Site made up of nearly three acres of land. Ms. Rosenberg oversaw remedial activities at the Site. More than 200,000 cubic yards of materials were excavated to a maximum depth of about 40 feet below ground surface. Ms. Rosenberg also maintained communications and coordinated with the Site's regulatory agency, New York City Department of Environmental Protection Office of Environmental Remediation (NYCDEP OER). She was responsible for screening soils, preventing comingling of different waste categories of materials, performing air monitoring, ensuring compliance with the Site's Community Air Monitoring Program, performing sediment-erosion control inspections, and collecting endpoint soil samples. Ms. Rosenberg maintained trucking disposal logs; and prepared routine reports, tank registration and closure reports, spill closure reports, and the Site's Remedial Closure Report. Ms. Rosenberg also ensured that dewatering and groundwater discharging procedures remained compliant with the associated New York City and New York State permits.

STEPHANIE ROSENBERG, P.G.
Associate Project Manager
Matrix New World Engineering

Water District Litigation Support, Levittown, NY – Expert hydrogeologist for the site, a possible source of chlorinated solvents detected within public supply wells, responsible for the evaluation on behalf of the Water District. Ms. Rosenberg compared analytical results from water supply wells to analytical data from monitoring wells associated with a large upgradient chlorinated solvents groundwater plume. She evaluated changes in contaminant concentration over time and vertical and horizontal mobility of detected contaminants to determine if this known groundwater plume was a potential source for that detected in the water supply wells. The evaluation was used as support for ongoing litigation.

New York City School Construction Authority (NYCSCA) Environmental Investigations, New York, NY – Environmental consultant for the environmental assessments and investigations required for property acquisition for proposed school construction in Queens, Brooklyn, Bronx, and Staten Island. Ms. Rosenberg was involved with environmental site inspections for proposed 3-K facilities and Phase I ESA inspections for various proposed school construction projects. She performed Indoor Air Quality (IAQ) surveys and Phase II ESAs at proposed school construction sites, including soil, groundwater, and soil vapor sampling. Ms. Rosenberg performed database reviews and report preparation for Phase I ESAs at various properties.

Hospital Hazardous Waste Reduction Plan, New York, NY – Environmental consultant responsible for providing environmental services related to the preparation of a Hazardous Waste Reduction Plan (HWRP) for the hospital facility. The facility is a Large Quantity Generator (LQG) and the report was prepared for submission to the NYSDEC. Ms. Rosenberg assisted in identifying the current hazardous waste streams present at the hospital and calculated changes in waste generation from previous years. Ms. Rosenberg summarized new hazardous waste reduction projects at the facility and summarized the effectiveness of previous and ongoing hazardous waste reduction projects.

Tier II Community Right-To-Know Reporting, New York, NY – Environmental consultant for multiple projects for the annual preparation of Tier II reports submitted to the NYCDEP. Ms. Rosenberg performed facility-wide chemical inventories at various hospitals, vehicle maintenance shops, power plants, and other light industrial facilities in New York City. She evaluated the quantities of reportable chemical, prepared Tier II forms and reports for the facilities, and submitted all completed reports to the NYCDEP and FDNY.

Municipal Storm Water Infrastructure & Flooding Evaluation, Island Park, NY – Geologist and GIS Analyst for a complete survey of the coastal Village of Island Park's storm drainage infrastructure and evaluation of ways to mitigate stormwater and tidal flooding throughout the Village. Ms. Rosenberg coordinated with field staff to collect information on the dimensions and condition of storm drains throughout the Village and mapped their locations and elevations using a GPS. Ms. Rosenberg created a GIS database of the storm drainage infrastructure and created 3-D flood maps using tidal elevation data to highlight areas likely to be inundated by high tide and storm surge from severe storm events. She worked with engineers using 3-D AutoCAD to determine the maximum capacity of the drainage infrastructure and identified areas within the Village with the greatest need for infrastructure replacement and repair.

Commercial Retail Phase II ESA, Delineation and SVI, Hopewell Junction, NY – Geologist providing Phase II ESA to support a property acquisition of a strip mall. Ms. Rosenberg oversaw a geophysical survey to detect the presence of underground structures, coordinated and oversaw tank removal and closure activities, and collected endpoint soil samples. She evaluated the analytical results and coordinated and oversaw subsurface delineation activities of chlorinated solvent contamination detected at the property, including installation of soil borings for soil and groundwater sampling, and performing a Soil Vapor Investigation (SVI). The delineation and SVI results were used to design and install a sub-slab depressurization system to treat soil vapor intrusion within the building.

New Cassel Groundwater Contamination Superfund Site, Westbury, NY – Geologist responsible for ongoing Site Management activities performed for a USEPA Federal Superfund Site and a NYSDEC Remediation Site. Ms. Rosenberg coordinated field staff to perform routine operations and maintenance activities for the Site's Soil Vapor Extraction/Air Sparge (SVE/AS) treatment system. She performed and coordinated quarterly groundwater monitoring events, prepared quarterly monitoring reports, and prepared Electronic Data Deliverables (EDDs) of analytical data to submit through the States EQuIS database. Ms. Rosenberg also was involved in data evaluation for ongoing litigation support, including the evaluation groundwater plume constituents and the horizontal and vertical extents of the plume to distinguish it from other nearby plumes originating from different sources.

STEPHANIE ROSENBERG, P.G.
Associate Project Manager
Matrix New World Engineering

Town Cemetery Spill Site Management, Greenfield, NY – Geologist for open New York State Spill at which historic diesel and gasoline underground storage tanks at the Site leaked and contaminated groundwater. Ms. Rosenberg coordinated field staff for routine operations and maintenance of the SVE/AS and ozone treatment systems. She also coordinated and performed quarterly groundwater monitoring at the Site, evaluating analytical data and preparing quarterly monitoring reports.

Town Petroleum & Chemical Bulk Storage Database, Town of Hempstead, NY – Environmental consultant for the creation of a Petroleum/Chemical Bulk Storage (PBS/CBS) database within the Town of Hempstead, NY. Ms. Rosenberg created a database using Microsoft Access with all bulk storage permit information for department of public works facilities, highway yards, parks facilities, sanitation facilities, and water department facilities. The database displays alerts for upcoming required tank testing, permit expiration, or tank expirations. The database provided pdf copies of all tanks at each facility within each department, and helped to maintain compliance with USEPA, NYSDEC, Nassau County Fire Marshal (NCFM), and Nassau County Department of Health (NCDOH) requirements.

Professional Registrations and Certifications
New York State Professional Geologist
Certified New York State Erosion & Sediment Control Inspector
OSHA 10-Hour Construction Industry Training, 2016
OSHA 30-Hour Construction Industry Training, 2020
OSHA 40-Hour Hazardous Waste Operations and Emergency Response Standard - HAZWOPER, 2013

MINDY CHASSIN HOROWITZ, PG
Technical Director
Matrix New World Engineering

Professional Qualifications

Mindy Horowitz has more than 25 years of experience in the environmental consulting field performing hazardous materials assessments, waterfront permitting, construction oversight and remedial design. Ms. Horowitz's areas of expertise include infrastructure projects, brownfield cleanup and redevelopment; investigation and remediation of New York City e-designation sites (sites with a zoning map amendment) with potential hazardous material contamination; environmental due diligence of industrial, commercial, residential and mixed-use facilities; environmental corridor studies to support CEQR/SEQRA/NEPA EAS/EIS preparation; litigation support for cost recovery and insurance matters; and development of remedial cost estimates. She has extensive experience managing and conducting hydrogeologic investigations for clients in both the public and private sectors, including projects focusing on rail roads, highways, airports and industrial and commercial facilities. Ms. Horowitz has developed and directed the implementation of numerous soil, groundwater and sediment sampling programs for remedial investigations at various sites. Her combined hydrogeological and geo-environmental engineering background, along with her varied experience in New York and New Jersey, enable her to compile and interpret analytical data to develop clear and technically defensible conceptual site models and incorporate these findings into reports for various city, state and federal regulatory programs. Mindy is certified through the NYC Mayor's Office of Environmental Remediation, as an OER Certified Brownfield Professional, to efficiently achieve brownfield cleanup and redevelopment on New York City Brownfield sites.

Education

MS, Civil Engineering, University of California at Berkeley, 1994
BS, Geophysics, State University of NY at Binghamton, 1993

Professional Experience

MTACC Penn Station Access Project – Project Director for the expansion of Metro-North Railroad services from the New Haven Line just west of New Rochelle, traveling through the Eastern Bronx and Queens via Amtrak's Hell Gate Line, through the existing East River Tunnels into Penn Station. Mindy was responsible for overseeing a number of technical assessments, including soil, groundwater, wetlands and hazardous materials investigations along the Amtrak right of way at four proposed station locations in the Bronx and within the 15-mile corridor. Four bridges will also be rehabilitated as part of the project. Matrix also prepared draft and final bid documents for release to Design-Build bidders for the design and construction of the project.

NYCEDC Tompkinsville Esplanade and Pier Project, Staten Island, NY – Environmental Project Manager for the NEPA EA for the New York City Economic Development Corporation to support the creation of a new waterfront esplanade and pier within the Tompkinsville section of Staten Island. In support of this project, Matrix is conducting environmental reviews to satisfy the requirements of National Environmental Protection Act (NEPA) in accordance with FEMA's regulations for NEPA implementation at 44 CFR Parts 9 and 10, New State Environmental Quality Review Act (SEQR) pursuant to 6 NYCRR 617.8 and New York City Environmental Quality Review (CEQR) pursuant to Sections 6-08 and 6-12 of Executive Order No. 91 of 1977. The objective of this project is to create a walkable waterfront recreation area, clean up damage remaining from Superstorm Sandy, and construct a new pier to house NYCDOT dock building operations. Matrix performed a Phase I Environmental Site Assessment and subsequent environmental investigations along the project area, including collection of soil and groundwater samples. The findings were incorporated into the hazardous materials chapter of the EA. Matrix also prepared a Remedial Action Plan and Construction Health and Safety Plan.

PANYNJ LaGuardia Airport Access Improvement Project, Corona, NY – Environmental Project Manager responsible for the environmental program for the Port Authority of New York and New Jersey (PANYNJ) to support preparation of an Environmental Impact Statement (EIS) to comply with the provisions of the National Environmental Policy Act (NEPA) with the Federal Aviation Administration (FAA) as the lead federal agency for the project, The project includes construction of a new automated people mover (APM) system for improved access to LGA through connections to the Long Island Rail Road (LIRR) and New York City Transit (NYCT).. Matrix performed a Phase I Environmental Site Assessment (ESA) for the entire corridor, extending from the airport to the Willets Point Station. Matrix also performed Phase I ESAs for multiple multi-lot properties in Corona, Queens, New York. The findings of the Phase I ESAs were used to develop a sampling plan for a Phase II Environmental Site Investigation (ESI), which included the installation of both soil borings and temporary well points, collecting both soil and groundwater samples to characterize materials encountered during construction. The results of the investigation were used in the development of the Affected Environment and Environmental Impacts chapters for Hazardous Materials.

MINDY CHASSIN HOROWITZ, PG
Technical Director
Matrix New World Engineering

NYCOMB Preparation of an Environmental Review and Uniform Land Use Review Procedure (ULURP) Application Services for a Borough Based NYC Jail System, City of New York, NY – Project Director for preliminary environmental and hazardous materials investigations and reporting to prepare the hazardous materials chapter of the Draft and Final Environmental Impact Statements (DEIS/FEIS) to support a comprehensive environmental review under the City's Environmental Quality Review (CEQR) procedures and the preparation and filing of Uniform Land Use Review Procedure (ULURP) application(s) for four facilities in Manhattan, Brooklyn, Bronx and Queens. To evaluate the potential for hazardous materials at the project sites, Matrix conducted Phase I Environmental Site Assessments (ESAs) for each site, followed by Phase II Environmental Site Investigations (ESIs) to collect soil, soil vapor and groundwater analytical data, as well as hazardous materials surveys at each facility to determine if asbestos-containing materials (ACM), lead-based paint (LBP) and/or other hazardous and universal wastes were present. Mindy was responsible for coordination with the New York City Department of Environmental Protection (NYCDEP) to ensure that the environmental subsurface and hazardous materials investigations conformed with CEQR requirements and to make recommendations for handling and disposal of soil and groundwater to be encountered during construction, and for engineering controls to be incorporated into the building designs.

NYCOMB Capital Project Scope Development (CPSD) Study for a Master Plan for a Borough Based NYC Jail System – Project Director for project to provide pre-schematic design services for a Capital Project Scope Development (CPSD) study for a Master Plan for a Borough Based NYC Jail System for evaluation of seven facilities in New York City. Mindy oversaw performance of a number of technical assessments, including subsurface environmental (Phase I Environmental Site Assessments and Phase II Environmental Subsurface Investigations) and hazardous materials investigations at each facility. The investigations included sampling soil, groundwater, soil vapor, asbestos-containing materials (ACM), lead-based paint (LBP) and/or other hazardous and universal wastes. The investigation findings were summarized in Environmental Testing Reports, to be used to inform the cost estimates and pre-schematic design for the facilities.

NYCEDC Citywide Ferry Service Projects, Staten Island, Queens, Bronx and Brooklyn, NY – Project Director for environmental assessments for the Citywide Ferry Service (CFS), which will construct new ferry landings around New York City. Ms. Horowitz oversaw a team of engineers who prepared Phase I Environmental Site Assessment (ESAs), Phase II Environmental Site Investigation (ESI) workplans and Phase II ESIs at eight proposed sites. The ESIs included the collection of soil, soil vapor and groundwater samples. As a result of the investigations, Matrix prepared Phase II ESI reports, Remedial Action Plans (RAPs) and Construction Health and Safety Plans (CHASPs).

NYCEDC Brooklyn Bridge-Montgomery Coastal Resiliency Project, Manhattan, NY – Environmental Project Manager for an environmental assessment to support development of resiliency strategies for the Brooklyn Bridge-Montgomery section of the Lower Manhattan Coastal Resiliency project. This project includes design and related services for the installation of a flood protection system parallel to South Street from the Brooklyn Bridge to Montgomery Street. Ms. Horowitz oversaw a team of engineers who prepared a Phase II Environmental Site Investigation (ESI) workplan and conducted a Phase II ESI throughout the investigation area. The ESI included the collection of soil and groundwater samples. As a result of the investigation, Matrix prepared a Phase II ESI report and the hazardous materials chapter of the EIS.

MTA MNR Bronx Greenway Feasibility Study, Spuyten Duyvil to Ludlow Trail, NY – Environmental Engineer responsible for providing analysis of environmental components of a feasibility study related to a potential pedestrian trail from Spuyten Duyvil station to Ludlow station along the Metro North Railroad tracks. The proposed trail would be located along the west side of the tracks adjacent to the Hudson River, providing the local community and residents from the region access to the Hudson River waterfront and provide them recreational opportunities and views of the scenic Hudson River. Environmental concerns included active and closed petroleum spills along the corridor and contaminants in soil and ballast from long-term rail use.

Metropolitan Transportation Authority/NYC Transit CM-1190, Second Avenue Subway – Phase 2 – For the second phase of the Second Avenue Subway, between 96th and 125th Streets, Ms. Horowitz managed the environmental field staff and provided quality control for the remedial investigation workplans and summary reports. The $535 million project includes planning, design, environmental studies, and utility relocation. Three new stations will be constructed at 125th Street, 116th Street, and 106th Street, with the existing tunnel at 116th Street being rebuilt to accommodate the new station there. The investigations included environmental sampling from both geotechnical and environmental soil borings and monitoring wells throughout the proposed alignment, as well as delineation borings where warranted.

MINDY CHASSIN HOROWITZ, PG
Technical Director
Matrix New World Engineering

Metropolitan Transportation Authority/Long Island Rail Road (LIRR) Expansion Project, Long Island, NY – Project Manager for the Long Island Rail Road Expansion Project in Long Island, New York project, for which Matrix is providing environmental and geotechnical services. The project is for the proposed addition of a third track along a 9.8-mile stretch of the railroad's heavily traversed Main Line corridor between the Floral Park and Hicksville train stations, and the elimination of the seven grade crossings along its route. The environmental scope included preparation of a hazardous materials chapter for the Draft Environmental Impact Statement (DEIS). The purpose of this investigation was to identify the potential presence of contaminated and/or hazardous materials as a result of current and/or former activities in the project area that may affect or be affected by the proposed project. Matrix also performed a waste characterization study which included advancement of forty borings along the alignment, with collection of soil samples to pre-characterize soil for disposal during construction. Matrix prepared a Waste Characterization Summary Report, detailing the findings of the investigation.

NYCOMB DSNY Staten Island 1&3 Garage & Boro Repair Shop - Staten Island, NY – As Environmental Project Manager, Ms. Horowitz oversaw the effort to provide professional environmental consulting services for the design and construction of a new garage structure at the DSNY Staten Island 1&3 Garage & Boro Repair Shop. The site is located on the edge of the former Fresh Kills Landfill, and a portion of the property is reclaimed land from the landfill. Ms. Horowitz oversaw a soil investigation to facilitate soil disposal during construction. By precharacterizing the subsurface, Matrix was able to identify whether contaminated materials were present in the subsurface in advance of construction, to avoid unknown health and safety risks to construction personnel and the public and costly delays if not identified and mitigated prior to construction. Matrix prepared a Sampling and Analysis Plan (SAP), oversaw a soil boring program, collected soil samples and prepared a Site Investigation Report (SIR).

NYCEDC Hunts Point PREPP, Hunts Point, Bronx, NY – Project Manager for the Hunts Point Peninsula Resiliency Evaluation and Pilot Project (PREPP), which is a program undertaken by NYCEDC to evaluate energy resiliency and flood protection in the Hunts Point section of the Bronx, and to design an energy resiliency pilot project. The study area includes the Hunts Point Food Distribution Center and the entire Hunts Point Peninsula, which is an area that is vulnerable to flooding during a major storm. Matrix is providing environmental permitting and land surveying services to support the Existing Conditions Analysis and the Feasibility Assessment and Analysis.

NYCDEP Honk Falls Dam Design, Napanoch, NY – Technical Director on the preparation of 10 Phase I ESAs to support the NYCDEP's proposed work to either upgrade or decommission the Honk Falls Dam in Naponoch, NY. Phase I ESAs were prepared for 10 properties encompassing and adjoining the dam. Ms. Horowitz oversaw preparation of the Phase I ESAs and provided quality control reviews.

Center for NYC Neighborhoods Resiliency Audits – Project Manager responsible for Center for New York City Neighborhoods (CNYCN) Resiliency Audits for Residential Technical Assistance Pilot Program. Each audit included site survey, travel and elevation certificate for multi and/or single-family residences. Matrix linked all control points to the New York State Plane Coordinate System, Long Island Zone (3104), NAD 83 (North American Datum, US Survey feet. Elevations were in NAVD 88 (North American Vertical Datum) to match the FEMA FIRM map datum. GPS GNSS observations were used and Matrix measured elevations for each building corner, finished floor, and each floor level of the building.

Commercial Redevelopment Site, Hunts Point, Bronx, NY – Project Manager for this 26-acre former construction and demolition debris landfill on the East River in the Oak Point section of the Bronx, Ms. Horowitz performed a jurisdictional analysis of the waterfront structures, including piers, riprap and a buried seawall to obtain a jurisdictional wetlands determination from NYSDEC to support redevelopment, pursuant to 6 NYCRR §661.18. The site was subsequently partially redeveloped with a food warehouse. During remediation and construction activities, Ms. Horowitz implemented the Stormwater Pollution Prevention Plan (SWPPP) and performed site inspections.

Queens West Development Corporation – Long Island City, NY – Environmental Engineer for large-scale redevelopment of a New York City waterfront which entailed remediation of numerous parcels of former industrial waterfront heavily contaminated with petroleum, coal tar and numerous other wastes, prepared remedial investigation work plans, remedial investigation reports and remedial action work plans. The site is being redeveloped into commercial and residential space with parks, roadways and green spaces. Ms. Horowitz was involved in obtaining wetlands permits from the Army Corp of Engineers and NYSDEC for various stages of the project. Ms. Horowitz was also involved in preparation of the RAWP, pilot test report, site management plan and final engineering report for one of the parcels—an NYS brownfields site. The remediation consisted of in situ

MINDY CHASSIN HOROWITZ, PG
Technical Director
Matrix New World Engineering

remediation of the creosote and MGP-related contamination using Surfactant-Enhanced In-Situ Chemical Oxidation (S-ISCO™) using activated persulfate injected via pressure-pulse technology. More than 50,000 pounds of coal tar contamination was destroyed in-situ in the soil. The same remedial strategy was also used for the adjacent Center Boulevard portion of the site, under the NYS Voluntary Cleanup Program. Wrote and implemented the Stormwater Pollution Prevention Plan (SWPPP) for various parcels of the project. One parcel was used as a staging area for soil excavated from other areas of the site and is surrounded by water on two sides. Ms. Horowitz implemented the Site Management Plan (SMP), which entailed ensuring compliance with the Engineering and Institutional Controls for each parcel, oversight of quarterly groundwater monitoring and annual reporting. Additionally, Ms. Horowitz performed sub-slab depressurization system (SSDS) installation inspections, SSDS start-up testing and SSDS annual monitoring. For four parcels under development within a portion of the site, Ms. Horowitz managed construction oversight which included coordination of health and safety air monitoring, imported fill, excavated soil management and sampling for disposal of soil and water.

West 17th Street and 10th Avenue Brownfield Cleanup Program Site – Environmental Engineer prepared the Remedial Investigation Report (RIR) and Remedial Action Work Plan (RAWP) for a $1.5 million investigation and remediation of a former industrial site in Manhattan conducted under the New York State Brownfield Cleanup Program. The site was originally made up of several lots and various tenants and was divided into two operable units to facilitate remediation under the Highline.

MTA/LIRR East Side Access Project Environmental Site Investigations – Project Engineer assisting in the development of environmental studies for the $4.3 billion project to connect the Long Island Rail Road (LIRR) to Grand Central Terminal in Manhattan. Assessments and investigations indicated that the site was contaminated by petroleum, polychlorinated bi-phenyls (PCBs), and chlorinated volatile organic compounds (CVOCs) from over 100 years of railroad use. Based on these results, Ms. Horowitz prepared Environmental Site Investigation (ESI) Findings Reports, Health and Safety Plans (HASPs), work plans, specifications, construction cost estimates and Construction Contaminant Management plans (CCMPs). She is also assisted with the design of the remedial investigation strategy for the site.

MTA/LIRR Long Island City Passenger Yard Petroleum Recovery System Inspection – Project Manager oversaw all aspects of the remediation system at a 100-year-old rail yard with vehicle fuel, minor maintenance, and vehicle storage facilities in Queens County, NY. Ms. Horowitz was inspecting the operation, monitoring, and maintenance of the recovery system, which consisted of a well-manifold system to recover light non-aqueous phase liquids (LNAPL). She also performed semi-annual evaluations of the LNAPL plume to make certain that it was not moving towards construction areas.

MTA/LIRR Acquisition of Property at Speonk Station – Project Engineer/Project Manager performed a Phase I Environmental Site Assessment of a single-family residence and assorted outbuildings, located in Speonk, NY as part of MTA's planned acquisition of this 1.6-acre property to provide additional parking at the Speonk train station. The assessment included a review of historical information, site inspection, and report preparation using the standard methods and procedures used by the financial-lending and environmental consulting industries and set by the American Society for Testing and Materials (ASTM) E-1527. Ms. Horowitz performed a detailed property inspection to identify any apparent or potentially adverse conditions on or adjacent to the property and to confirm historical information that was obtained. The inspection revealed the possible presence of USTs used for heating oil, and sanitary septic/leaching systems. As project manager, she oversaw the Phase II Environmental Site Investigation (ESI), which included a geophysical survey and soil and groundwater sampling. Her responsibilities included locating and investigating the impact of the septic system and delineating the metals contamination caused by illegal dumping. Using the results of these studies, she prepared an ESI findings report, followed by a Remedial Action Work Plan.

MTA/LIRR Farmingdale Diesel Spill Remediation Litigation Support – Project Manager oversaw the investigation of a petroleum spill in Suffolk County, NY, the results of which were used in litigation. Coordinating with representatives of LIRR's legal counsel, Ms. Horowitz oversaw a geophysical investigation, the installation of soil borings, and the collection of soil and groundwater samples from the spill area and inside an adjacent facility. Her staff used these results in the preparation of Findings Reports. To avoid disruption to the owner's business, Ms. Horowitz managed field activities on weekends, and used innovative sampling mechanisms, including a remote-controlled, track-mounted Geoprobe® rig. As a result of investigations, she prepared a presentation for NYSDEC with a request for spill closure. Ms. Horowitz's duties included assisting in the preparation of witness testimony.

MINDY CHASSIN HOROWITZ, PG
Technical Director
Matrix New World Engineering

MTA/LIRR Oyster Bay Yard Environmental Site Investigation (ESI) – Project Manager Collected soil and groundwater samples, oversaw monitoring well installations, and analyzed and interpreted data to delineate petroleum spillage at the rail yard in Oyster Bay, NY. Ms. Horowitz also quantified soil and groundwater contamination for use in the Findings Report. In addition, she oversaw a tidal study to determine the tide's influence on groundwater flow.

Glen Cove Community Development Agency/City of Glen Cove Glen Cove Road Extension Environmental Assessment – Project Engineer assisted in the environmental review of a proposed 2,000-foot roadway connector project, which provides access to the community's waterfront area by extending Glen Cove Road in Glen Cove, NY. One purpose of the review was to assess the potential environmental impact of several proposed design plans. Ms. Horowitz prepared the Hazardous Waste Screening Report, as well as the Health and Safety and Sampling and Analysis Plans (HASP and SAP). She oversaw the asbestos investigation, supervised the soil and groundwater sampling, and monitored the well installation and radiological investigations to quantify and delineate site contamination. Ms. Horowitz performed these tasks in accordance with the requirements listed in NYSDOT's Environmental Procedures Manual. To make recommendations for the construction phase of the project, she compiled data from the environmental review and drafted a remediation plan.

Westchester County DPW Westchester County Airport Parallel Taxiway "L" Reconstruction and Extension Phase IV – Project Engineer responsible for overseeing the design and construction of a $4 million new taxiway at the airport in Westchester County, NY. Ms. Horowitz oversaw the hazardous materials investigation including all subsurface environmental components for preliminary and final design, and construction phasing services as part of the EIS. Ms. Horowitz investigated the potential presence of buried drums, tanks, and septic leaching fields using geophysical survey instrumentation and soil/groundwater sampling techniques. The investigation included a lead paint and asbestos assessment of existing hangar structures to be demolished.

Exxon RCRA Project at Bayway/Exxon Refinery – Environmental Engineer collected and assessed hydrogeologic data as part of remedial investigation of numerous areas in the refinery in Union County, NJ that were suspected of petroleum and hydrogen sulfide contamination. She prepared hydrogeologic cross-sections of a landfarm and a Resource Conservation and Recovery Act (RCRA) underground storage tank (UST), and maintained a historical database for six areas of concern, including a former landfarm/landfill, process areas, and bulk storage tank areas.

Foam Manufacturer Soil and Groundwater Contamination Investigations – Environmental Engineer investigated soil and groundwater contamination, including petroleum, acetone, isopropyl alcohol and phthalate contamination which extended onto two adjoining properties in Carlstadt, NJ. Ms. Horowitz developed work plans and conducted field work to delineate soil and groundwater plumes. Based on these results, she developed a remedial action work (RAW) plan that included a 72-hour aquifer pumping test, which she oversaw. Ms. Horowitz's duties included assisting in a biofeasibility study to evaluate the status of bioremediation efforts on-site.

New York City School Construction Authority – Various, NYC – Acted as Quality Assurance (QA) Officer in review of various Phase I Environmental Site Assessment Reports (Purdy Street, 352 Park Avenue South, 732 Henry Street, P.S. 980Q); an Indoor Air Quality Report (P.S. 82Q); and for various Above-Ground Storage Tanks Closure Reports (P.S. 120K and P.S. 23R).

Lenz/Norfolk Southern Corporation Conway Rail Yard Phase II Environmental Site Investigation – Environmental Engineer assisted in the subsurface investigation by analyzing and interpreting laboratory data for the proposed $70 million construction of a locomotive service facility at this active freight rail yard in Conway, PA. In compliance with Pennsylvania Department of Environmental Protection (PADEP) regulations, Ms. Horowitz used Surfer contouring software to quantify and delineate the extent of petroleum-impacted soil and groundwater. Afterwards, she prepared a soil and groundwater investigation report, a Construction Contaminant Management Plan (CCMP) for proposed construction activities, and a general report of the project.

PANY&NJ JFK International Airport Access Program Phase II Environmental Site Investigations – As part of the JFK airport access program, which connects the airport terminals, rental car facilities, and the New York City transit subway and bus network via a $1.3 billion light rail system (the Airtrain), Environmental Engineer supervised geophysical subsurface surveys for the Phase II Environmental Site Investigation (ESI) at five sites in Queens County, NY. Ms. Horowitz supervised exploratory Geoprobe® soil borings, the collection of representative soil and groundwater samples, and the analysis and interpretation of laboratory analytical data. She prepared environmental

MINDY CHASSIN HOROWITZ, PG
Technical Director
Matrix New World Engineering

construction specifications, ESI reports, Sampling and Analysis Plans (SAP), Health and Safety Plans (HASP), and Construction Contaminant Management Plans (CCMPs). Ms. Horowitz oversaw soil waste characterization investigations at three areas within the LIRR Johnson Avenue Yard. To determine the existing subsurface conditions before construction and save money, she performed waste classification of the soil prior to disposal, and she identified and delineated an area of hazardous metals soil concentrations. As part of the design phase, she also prepared a wetlands construction package.

PANY&NJ Terminal A Redevelopment Program – Bridges N57 and N58, Newark Airport, Elizabeth, New Jersey – As Project Manager, Ms. Horowitz oversaw the effort to provide professional environmental consulting services to support the Port Authority of New York and New Jersey (PANYNJ) on the Terminal A Redevelopment Roadway Bridges N58 and N59 project at Newark Liberty International Airport. The project included a pre-construction environmental subsurface investigation to identify potential areas of contaminated materials and hazardous waste that may impact project design and construction along the proposed bridge alignments. By precharacterizing the subsurface, Matrix was able to identify whether contaminated materials were present in the subsurface in advance of construction, to avoid unknown health and safety risks to construction personnel and the public and costly delays if not identified and mitigated prior to construction. The scope, which began in the design development phase and lasted through final design and contract document preparation, included preparation of a Sampling and Analysis Plan (SAP); a geophysical survey to clear boring locations and to evaluate the presence of buried materials; collection of soil, sediment and groundwater samples; preparation of a Site Investigation Report (SIR); and review and comment on project design specifications and drawings to ensure that they adequately addressed environmental findings relative to materials management. Project design specifications and drawings were also reviewed for adequate handling of potential hazardous materials, including asbestos, lead paint and universal wastes.

Port Authority of NY & NJ LaGuardia Airport Central Terminal Replacement Project Phase 2 And 3 Soil Investigation – Ms. Horowitz was the Project Manager supporting the Design Joint Venture (DJV), a joint venture of Parsons Brinckerhoff and Hellmuth, Obata & Kassabaum, Inc. (HOK) on environmental consulting for design-build work within the P3 Phase 2 New Central Terminal Building (CTB) division and the New Improvements division of the Project. To support construction of building foundations, utility relocation and temporary roadways for the P3 Phases 2 and 3 areas, soil excavation, transport and disposal off-site or reuse on-site was proposed and Matrix collected representative soil samples in order to characterize the soil for disposal prior to excavation. Ms. Horowitz oversaw the field staff during installation of 76 soil borings and collection of 145 soil samples, characterizing 116,000 cubic yards of soil. The excavation area was divided into a grid and soil sampling was conducted to ensure that anticipated areas and depths of excavations were adequately represented as per disposal facility requirements, while effectively optimizing the number of borings to be installed and the number of samples to be collected. After review of the data, it was determined that additional sampling was required and Matrix oversaw advancement of 24 delineation borings, completed in areas which exhibited results above the cleanup objectives. Matrix prepared the Environmental Soil Investigation Summary Report for Phases 2 and 3.

NYCT 100th Street Bus Depot Phase II Environmental Site Investigations – Project Engineer oversaw the pre-construction remedial soil and groundwater investigation, including soil borings and the installation of test pits to bedrock, for the construction of a new, four-story, $95 million bus depot in Manhattan. Ms. Horowitz's duties included the preparation of a Findings Report on the investigation, and a Construction Contaminant Management Plan (CCMP) for the handling and disposal of contaminated soil and groundwater. She also provided technical guidance during the construction of the 80,000-square-foot, 98-foot-tall building, which houses standard buses and 133 articulated (60-foot-long) buses.

NYC DDC Coney Island Hospital UST Removal and Upgrade – Environmental Engineer oversaw the removal and upgrade of an underground storage tank (UST) at Coney Island Hospital in Brooklyn, NY. Ms. Horowitz collected all post-excavation soil samples and delineated soil and groundwater plumes. She also performed slug tests and aquifer pumping tests, compiling data into a remedial action work plan.

Former Gas Station in the Pinelands, NJ – Environmental Engineer managed a soil and groundwater remediation project at a petroleum-contaminated site, a former gas station in the pinelands of New Jersey. Ms. Horowitz oversaw the installation of an air sparging/soil vapor extraction (AS/SVE) remediation system. She also collected air, soil, and groundwater samples to monitor the progress of remediation, wrote project reports, and collected and analyzed the project data.

MINDY CHASSIN HOROWITZ, PG
Technical Director
Matrix New World Engineering

Proposed City Island Waterfront Redevelopment, Bronx NY – Project Manager for the proposed waterfront development, Ms. Horowitz prepared NYSDEC Joint Application for Permit for repair of riprap along the waterfront and development within a wetlands adjacent area. She was involved with negotiations with NYSDEC regarding jurisdictional and bulkhead issues.

Commercial Storage Facility Wetlands Permitting, Bronx, NY – Project Engineer responsible for preparing NYSDEC Joint Application for Permit for demolition of facility overhanging the Bronx River and construction of a new building, with an improvement to an existing rip-rap wall. The site needed 401 Water Quality Certification and fell under the ACOE's Nationwide Permit #3. The site was in an archaeologically sensitive area and Ms. Horowitz oversaw the archeological study.

River East Wetlands Permitting – This permitting project was part of a larger residential development located along the East River. Project Engineer prepared NYSDEC Joint Application for Permit for a sewer outfall. The site needed 401 Water Quality Certification and fell under the ACOE's Nationwide Permit #7.

NYC Department of City Planning Rezoning – Project Manager managed hazardous materials screening protocols required under NYC City Environmental Quality Review (CEQR) for several NYC neighborhood rezoning efforts as part of a NYC Department of City Planning contract. The evaluation resulted in the NYC DCP designating certain lots as New York City e-designation sites (sites with a zoning map amendment) with potential hazardous material contamination. The effort included evaluation of historical maps, databases and directories.

Fast Food Chain Bakery Site – Project Manager directed and managed site investigation and remediation for a former fast food bakery following cessation of operations at the site in Middlesex County, NJ, which triggered Industrial Site Recovery Act (ISRA). The investigation included a PCB forensics evaluation to determine the potential sources of PCBs, metals and PAHs in sediment in a wetlands ditch. The site, located on a former military storage facility, had a complicated site history and former usage which contributed to the contaminants found on-site. Remediation included delineation, cleanup, and restoration of the wetlands ditch and placement of a site cap as an engineering control required as part of a deed notice.

International Fragrance Company – Project Manager managed site investigation at several Areas of Concern (AOCs) potentially subject to past releases, conducted resulting from the sale of a former warehouse and manufacturing facility located in Morris County, New Jersey. Ms. Horowitz led the performance of a groundwater investigation and evaluation of the presence of tentatively identified compounds (TICs) in groundwater. Worked with the New Jersey Certified Laboratory to conduct a calibration study to determine the presence of a particular non-targeted compound in groundwater. Interfaced with the purchaser's consultant who conducted due diligence. The Response Action Outcome (RAO) was issued in 2014 and the project is complete.

Commercial and Industrial Site – Project Manager oversaw the Preliminary Assessment and Site Investigations stemming from an ISRA matter at this multi-tenant property in Leonia, NJ. Contaminants found in site sediment were investigated and determined to be the result of floodwaters from Overpeck Creek which inundated the site during major storms. Other Areas of Concern (AOCs) included a former PSE&G transformer, historic fill and volatile organic compounds (VOCs) contamination found in groundwater.

Childcare Facility Licensing – Project Manager performed the Preliminary Assessment and managed the subsequent steps needed to obtain the Response Action Outcome (RAO) for this day care center located in a former industrial building in Jersey City, NJ. The leasehold site was subject to the Madden Legislation and required implementation of engineering and institutional controls for the exterior playground and interior space. Ms. Horowitz oversaw the public notification; well search/receptor evaluation; playground/cap construction and implementation of the remedy; preparation of the RI/RAWP/RAR report; deed notice filing; establishment of the Classification Exception Area (CEA) for Groundwater; preparation of the Remedial Action Permit Application – Soil; and the preparation of the RAO.

Adhesives Manufacturer – Project Manager oversaw the investigation of a BTEX spill to a former industrial supply well at a site also under investigation by the owner and their consultant for chlorinated solvent contamination in groundwater. The BTEX spill triggered a vapor intrusion investigation of surrounding buildings. Ms. Horowitz supervised a groundwater modeling effort to simulate the fate and transport of contaminants in groundwater and develop capture zone analysis for groundwater purging from the impacted well. Interim-remedial measures were

MINDY CHASSIN HOROWITZ, PG
Technical Director
Matrix New World Engineering

limited due to the density of utilities in the impacted area, and soil removal was conducted using a combination of manual removal, a vacuum truck, and compressed air knife.

Private University – At the request of this private university in New York City, Project Manager responsible for managing a peer review of a series of claims from a construction contractor related to a campus expansion pertaining to soil classification and disposal protocol for excavated soils from the project. The goal was to assist in resolving the disputes outlined in the claims and related correspondence and determine the appropriate protocol for classifying the excavated soils for disposal/re-use. The document library reviewed included reports, invoices and correspondence from multiple consultants, university staff and contractors. Ms. Horowitz prepared a document summarizing the findings of the evaluation and the reasonableness of the claims.

Former Bottling Plants Investigation, Long Island, NY – Project Manager oversaw the site investigations at two former bottling plants in Long Island, NY, on behalf of the property owner to determine potential impacts from prior operations. At both facilities, the floor drain systems were compromised, and sediments and soil were found to be impacted by metals and PAHs. At one plant, non-contact cooling water was discharged to an off-site creek and a sediment investigation was conducted. Additional investigations were undertaken by the prior tenant's consultant and Ms. Horowitz evaluated the findings of those investigations and prepared data summaries and additional scopes of work.

Residential Redevelopment Site Dispute Resolution, New York, NY – Project Manager evaluated underground storage tank (UST) closure and remediation cost claims made by the developer for nearly $2,000,000. As part of the evaluation, Ms. Horowitz reviewed UST Closure reports, field notes and logs, photographs, invoices and waste manifests and determined that the reasonable claim amount was under $40,000.

Residential Redevelopment Site, Bayonne, NJ – This former industrial site was redeveloped into residential apartments, and Project Manager oversaw the termination and modification of a prior deed notice and the preparation of new engineering control plans and a Soil Remedial Action Permit due to differences in final construction from what was included in the original deed notice. During construction, two previously unknown underground storage tanks (USTs) were found and Ms. Horowitz supervised the registration and removal of the USTs, remediation of associated impacted soils, and preparation of a UST Closure Report and RAO.

Professional Registrations and Certifications
Professional Geologist, NY, 2017
NYC OER Certified Brownfield Professional, 2015
OSHA 8 Hour Supervisor - HAZWOPER, 2000
Engineer in Training - Pennsylvania, 1996
OSHA 40-hour Hazardous Waste Operations and Emergency Response Standard - HAZWOPER, 1994

BRIAN CRESPI
Environmental Project Manager
Matrix New World Engineering

Professional Qualifications

Brian Crespi has more than ten years of experience in the environmental consulting field performing initial and remedial site assessments, hazardous materials assessments, construction oversight, health and safety monitoring, remedial design, and landfill gas evaluations. Mr. Crespi's areas of expertise include brownfield cleanup and redevelopment; investigation and remediation of sites with potential hazardous material contamination; litigation support for cost recovery and insurance matters; development of remedial cost estimates; and vapor intrusion assessments and remediation. Mr. Crespi has extensive experience conducting investigations for clients in both the public and private sectors, including projects focusing on railroads, landfills, industrial and commercial facilities, as well as impacts on neighboring or proposed residential development. Mr. Crespi has developed and directed the implementation of numerous soil, groundwater and vapor intrusion sampling programs for remedial investigations at industrial facilities being evaluated under the New York Spill Response Program and SRRA and ISRA in New Jersey. His environmental science and engineering background, along with varied experience in New York and New Jersey, provide the foundation to develop and implement investigation and remediation plans and develop the findings into reports for various state and federal regulatory programs. Mr. Crespi is certified through the NYC Mayor's Office of Environmental Remediation, as an OER Certified Brownfield Professional, to efficiently achieve brownfield cleanup and redevelopment on New York City Brownfield sites.

Education

MS, Environmental Engineering, New Jersey Institute of Technology, 2010
BS, Natural Resources, Cornell University, 2006

Professional Experience

Pacific Park – Empire State Development Corporation, Brooklyn, NY – Project Manager for this project, on which Matrix is providing ongoing environmental compliance oversight services for the ongoing construction of a mixed-use development and railyard overbuild. He is responsible for field inspections, compliance and construction progress meetings with the state, site contractors and on-site environmental monitor (OEM), OEM documentation audits, attendance at stakeholder meetings, along with daily, monthly, and annual reporting and project management required for the project.

MTACC Penn Station Access Project – Environmental Project Manager for the project on which Matrix provided environmental services related to preparation of design/build documents for The Penn Station Access project, to support construction of new commuter stations located in the East Bronx neighborhoods, electrical DC Substations, bridge rehabilitations, and 6 miles of new track work beginning in Westchester County and ending in Manhattan at New York Penn Station (the Site). Brian developed the sampling plan, coordinated and oversaw the 5-month field mobilization of multiple field employees sampling over 150 borings and nearly 40 monitoring wells along 15 miles of existing operational railway. He oversaw data analysis and preparation of the Subsurface Investigation Report.

NYCEDC Tompkinsville Esplanade and Pier Project, Staten Island, NY – Project Professional for the NEPA EA for the New York City Economic Development Corporation to support the creation of a new waterfront esplanade and pier within the Tompkinsville section of Staten Island. In support of this project, Matrix is conducting environmental reviews to satisfy the requirements of National Environmental Protection Act (NEPA) in accordance with FEMA's regulations for NEPA implementation at 44 CFR Parts 9 and 10, New State Environmental Quality Review Act (SEQR) pursuant to 6 NYCRR 617.8 and New York City Environmental Quality Review (CEQR) pursuant to Sections 6-08 and 6-12 of Executive Order No. 91 of 1977. The objective of this project is to create a walkable waterfront recreation area, clean up damage remaining from Superstorm Sandy, and construct a new pier to house NYCDOT dock building operations. Matrix performed a Phase I Environmental Site Assessment and subsequent environmental investigations along the project area, including collection of soil and groundwater samples. The findings were incorporated into the hazardous materials chapter of the EA. Matrix also prepared a Remedial Action Plan and Construction Health and Safety Plan.

PANYNJ LaGuardia Airport Access Improvement Project, Corona, NY – Environmental Project Professional responsible for development and implementation of environmental investigations to support the Port Authority of New York and New Jersey (PANYNJ) in preparation of an Environmental Impact Statement (EIS) to comply with the provisions of the National Environmental Policy Act (NEPA) with the Federal Aviation Administration (FAA) as the lead federal agency for the project, The project includes construction of a new automated people mover (APM) system for improved access to LGA through connections to the Long Island Rail Road (LIRR) and New York City Transit (NYCT).. Matrix performed a Phase I Environmental Site Assessment (ESA) for the entire corridor, extending from the airport to the Willets Point Station. Matrix also performed Phase I ESAs for multiple multi-lot properties in

BRIAN CRESPI
Environmental Project Manager
Matrix New World Engineering

Corona, Queens, New York. The findings of the Phase I ESAs were used to develop a sampling plan for a Phase II Environmental Site Investigation (ESI), which included the installation of both soil borings and temporary well points, collecting both soil and groundwater samples, including analysis for PFAS, to characterize materials encountered during construction. The results of the investigation were used in the development of the Affected Environment and Environmental Impacts chapters for Hazardous Materials.

NYCEDC Brooklyn Bridge-Montgomery Coastal Resiliency Project, Manhattan, NY – Environmental Project Professional for an environmental assessment to support development of resiliency strategies for the Brooklyn Bridge-Montgomery section of the Lower Manhattan Coastal Resiliency project. This project includes design and related services for the installation of a flood protection system parallel to South Street from the Brooklyn Bridge to Montgomery Street. Mr. Crespi led the preparation of a Phase II Environmental Site Investigation (ESI) workplan and oversaw the implementation of a Phase II ESI throughout the investigation area. The ESI included the collection of soil and groundwater samples. As a result of the investigation, Matrix prepared a Phase II ESI report and the hazardous materials chapter of the EIS.

NYCDEP CSO-BRX-DES Combined Sewer Outflow Long Term Control Plan for Bronx River Project - Environmental Project Manager overseeing a program of environmental assessments for the New York City Department of Environmental Protection (NYCDEP) CSO-BRX-DES: Combined Sewer Overflow (CSO) Long Term Control Plan (LTCP) for Bronx River Project. The selected project alternative consists of designing: a parallel sewer to provide hydraulic relief at CSO outfall HP-007; a parallel sewer to provide hydraulic relief at CSO outfall HP-009; and a new regulator to replace existing Regulator 5 and provide floatables control at CSO Outfall HP-011.Matrix prepared multiple Phase I Environmental Site Assessments for target properties and potential corridors that were under consideration for the project route and advised the design team on potential environmental concerns during construction.

Metropolitan Transportation Authority (MTA)/Long Island Rail Road (LIRR) Expansion Project, Long Island, NY - Project Engineer for this project, on which Matrix provided environmental services related to the preparation of a draft Environmental Impact Statement (DEIS) for the Long Island Rail Road Expansion Project in Long Island, New York. Matrix was responsible for the preparation of the hazardous materials sections of the DEIS associated with LIRR's proposed addition of a third track along a 9.8-mile stretch of the railroad's heavily traversed Main Line corridor between the Floral Park and Hicksville train stations, and the elimination of the seven grade crossings along its route. The purpose of this investigation was to identify the potential presence of contaminated and/or hazardous materials as a result of current and/or former activities in the project area that may affect or be affected by the proposed project. He assisted in research, analysis and preparation of the contaminated materials chapter and designed and implemented a soil characterization boring program along proposed retaining walls to support the project.

NYCOMB Preparation of an Environmental Review and Uniform Land Use Review Procedure (ULURP) Application Services for a Borough Based NYC Jail System, City of New York, NY - Project Manager for preliminary environmental and hazardous materials investigations and reporting to prepare the hazardous materials chapter of the Draft and Final Environmental Impact Statements (DEIS/FEIS) to support a comprehensive environmental review under the City's Environmental Quality Review (CEQR) procedures and the preparation and filing of Uniform Land Use Review Procedure (ULURP) application(s) for four facilities in Manhattan, Brooklyn, Bronx and Queens. To evaluate the potential for hazardous materials at the project sites, Matrix conducted Phase I Environmental Site Assessments (ESAs) for each site, followed by Phase II Environmental Site Investigations (ESIs) to collect soil, soil vapor and groundwater analytical data, as well as hazardous materials surveys at each facility to determine if asbestos-containing materials (ACM), lead-based paint (LBP) and/or other hazardous and universal wastes were present. Brian was responsible for planning and implementation of the investigations, as well as the development of recommendations for handling and disposal of soil and groundwater to be encountered during construction, and for engineering controls to be incorporated into the building designs.

NYCOMB Capital Project Scope Development (CPSD) Study for a Master Plan for a Borough Based NYC Jail System - Project Manager for project to provide pre-schematic design services for a Capital Project Scope Development (CPSD) study for a Master Plan for a Borough Based NYC Jail System for evaluation of seven facilities in New York City. Brian coordinated and planned a number of technical assessments, including subsurface environmental (Phase I Environmental Site Assessments and Phase II Environmental Subsurface Investigations) at each facility. The investigations included sampling soil, groundwater, soil vapor, asbestos-containing materials (ACM), lead-based paint (LBP) and/or other hazardous and universal wastes. The investigation findings were

summarized in Environmental Testing Reports, to be used to inform the cost estimates and pre-schematic design for the facilities.

MTA MNR Bronx Greenway Feasibility Study, Spuyten Duyvil to Ludlow Trail, NY – Environmental Scientist responsible for providing analysis of environmental components of a feasibility study related to a potential pedestrian trail from Spuyten Duyvil station to Ludlow station along the Metro North Railroad tracks. The proposed trail would be located along the west side of the tracks adjacent to the Hudson River, providing the local community and residents from the region access to the Hudson River waterfront and provide them recreational opportunities and views of the scenic Hudson River. Brian coordinated a desktop review and performed a subsequent inspection of the alignment to evaluate potential environmental concerns including active and closed petroleum spills along the corridor and contaminants in soil and ballast from long-term rail use.

Restaurant Site Redevelopment, Suffolk County, NY – Project Manager directed and managed the preparation of Phase I and Phase II site assessments of adjacent parcels to accommodate the redevelopment of a fast food restaurant property. The redevelopment required acquisition of a neighboring state-owned property which complicated the transaction as the state property was no longer an active tax parcel and had a potential history as a fuel service station. Mr. Crespi planned a geophysical and soil sampling investigation which revealed an abandoned UST and historical pesticide exposure. The Phase I and Phase II sampling results and report informed the client's ultimate decision regarding the feasibility of the property acquisition.

Mariners Marsh Park, Staten Island, NY – On behalf of New York City Department of Parks and Recreation (DPR), Project Scientist on this project to develop a master plan to reopen this park with an extensive industrial history. Responsible for conducting a review of an extensive investigative history of remedial work by various consultants and compiling into a database in order to create a workable summary of the site's environmental past to support the potential reopening of the more than 100-acre site as a park. Mr. Crespi used the evaluation to develop a sampling plan to collect additional data needed to design the remedial approach to support the master plan.

Private University, New York, NY – At the request of this private university in New York City, Project Scientist responsible for conducting a review of a series of claims from a construction contractor related to a campus expansion pertaining to soil classification and disposal protocol for excavated soils from the project. The goal was to assist in resolving the disputes outlined in the claims and related correspondence and determine the appropriate protocol for classifying the excavated soils for disposal/re-use. The document library reviewed included remedial and construction workplans, environmental progress reports, invoices and correspondence from multiple consultants, university staff and contractors. Mr. Crespi prepared a document summarizing the findings of the evaluation and the reasonableness of the claims.

NYCEDC Hunts Point PREPP, Hunts Point, Bronx, NY – Project Scientist for the Hunts Point Peninsula Resiliency Evaluation and Pilot Project (PREPP), which is a program undertaken by NYCEDC to evaluate energy resiliency and flood protection in the Hunts Point section of the Bronx, and to design an energy resiliency pilot project. The study area includes the Hunts Point Food Distribution Center and the entire Hunts Point Peninsula, which is an area that is vulnerable to flooding during a major storm. Mr. Crespi performed a review of prior environmental investigation and remediation across the study area, including former manufactured gas operations and residual contamination, for inclusion in the hazardous materials chapter of an Environmental Assessment prepared for the site.

Chromium-Contaminated Sediment Remediation, Hackensack River, NJ – Project Scientist provided construction and environmental oversight for the implementation of chromium-contaminated sediment remediation in the Hackensack River. The remediation included limited dredging followed by the capping of over 35 acres of tidally-influenced sediment using hydraulic spreaders, mechanical placement, and telebelt placement operations. During and following the completion of the capping program, Mr. Crespi conducted long-term monitoring of the cap, collecting pore-water samples, sediment/vegetation samples, visually inspecting cap condition, and overseeing dive team surveys of cap areas. Responsibilities on the upland portion of the site included oversight of the remediation contractor's compliance with various permits (including stormwater control and discharge measures) and remedial workplan, as well as management of fill materials brought on site.

Residential Redevelopment Site Dispute Resolution, New York, NY – Project Scientist evaluated underground storage tank (UST) closure and remediation cost claims made by the developer for nearly $2,000,000 due to

BRIAN CRESPI
Environmental Project Manager
Matrix New World Engineering

contaminated soil and groundwater. As part of the evaluation, Mr. Crespi performed field oversight of excavation and sampling activities, conducted a geophysical investigation to reveal previously undiscovered USTs, reviewed UST Closure reports, field notes and logs, photographs, invoices and waste manifests. Assessments determined that the reasonable claim amount was under $40,000 and supported a client settlement of substantially less than the initial claim.

Former Military Facility Pre-Excavation Soil Assessment, Brooklyn, NY – Project Scientist prepared the sampling plan and conducted a soil boring assessment for a planned utility trench at the site in Brooklyn. Mr. Crespi prepared a workplan to accommodate pre-excavation waste classification sampling for disposal, as well as to determine potential worker exposure to VOC, SVOC, and metals compounds known to exist at the site. He led the drill team, logged borings and collected soil samples, and prepared an investigation report summarizing the results of the assessment.

Queens West Development Corporation – Long Island City, NY – Environmental Scientist for large-scale redevelopment of a New York City waterfront which entailed remediation of numerous parcels of former industrial waterfront heavily contaminated with petroleum, coal tar and numerous other wastes. Mr. Crespi acted as on-site environmental construction manager, ensuring construction activities complied with the site health and safety plan and that vapor barrier and other mitigation designs were properly implemented. Mr. Crespi monitored worker safety while construction proceeded into soils known to be contaminated by VOCs, metals, and free product, as well as managed imported fill, conducted sampling for disposal of soil and water, and ensured excavated soils were managed in accordance with the site workplan.

Retail Paint Store Fuel Oil Release, New York, NY – A historical leak in a fuel oil fill line was repaired and soils remediated, leaving a plume of LNAPL on the water table at a paint store in New York, NY. Project Scientist conducted product recovery and well gauging events in accordance with NYSDEC case manager negotiations. Following months of product recovery, Mr. Crespi prepared a site closure report which was approved by NYSDEC.

Chromium-Contaminated Sediment Remediation, Hackensack River, NJ – Project Scientist provided construction and environmental oversight for the implementation of chromium-contaminated sediment remediation in the Hackensack River. The remediation included limited dredging followed by the capping of over 35 acres of tidally-influenced sediment using hydraulic spreaders, mechanical placement, and telebelt placement operations. During and following the completion of the capping program, Mr. Crespi conducted long-term monitoring of the cap, collecting pore-water samples, sediment/vegetation samples, visually inspecting cap status, and overseeing dive team surveys of cap areas.

Dry Cleaner, NJ – As Project Scientist Mr. Crespi designed and implemented soil gas and indoor air sampling within multiple tenant spaces in a strip mall in Morris County, NJ with known chlorinated VOC contamination from historical dry-cleaning operations. After sampling results revealed indoor air concentrations of immediate environmental concern, Mr. Crespi provided oversight and commissioning for the installation of a subsurface depressurization system (SSDS) to vent three of the tenant spaces. Mr. Crespi managed long-term O&M to ensure optimal system function and to comply with the SSDS air permit.

Vapor Intrusion Investigation and Remediation, Superfund Site, New Jersey – Project Scientist implemented a large soil gas and indoor air sampling investigation following EPA intervention at a manufacturing facility under historical Superfund investigation. Follow-up sampling revealed an immediate occupational health condition due to TCE concentration. Mr. Crespi provided oversight and commissioning for the emergency installation of a large scale SSDS throughout the facility. He developed and assisted with long-term monitoring of temporary and eventual permanent SSDS operations. Mr. Crespi assisted with logistical planning and implementation of other environmental investigation activities at the site, including groundwater and drinking water sampling events.

Solvent Mixing Facility – Project Scientist directed and oversaw remedial investigation to support remedial design at an active solvent mixing facility in Bergen County, NJ. The investigation included synthesis of over three decades of historic sampling data, a vapor intrusion investigation, preparation of a groundwater sampling plan, and implementation of pilot studies for potential chemical and microbial in-situ remediation of BTEX and chlorinated VOC contaminants. The site, located on a major river in a highly industrialized corridor, had a complicated site history and former usage which contributed to the contaminants found on site.

BRIAN CRESPI
Environmental Project Manager
Matrix New World Engineering

International Fragrance Company – Project Scientist implemented site investigation at several Areas of Concern (AOCs) potentially subject to past releases, conducted resulting from the sale of a former warehouse and manufacturing facility located in Morris County, New Jersey. Mr. Crespi oversaw the performance of a groundwater investigation and evaluation of the presence of tentatively identified compounds (TICs) in groundwater. Mr. Crespi planned and implemented a background study, which confirmed site metals were due to natural background conditions associated with regional geology. A Response Action Outcome (RAO) was issued in 2014 and the project is complete.

Adhesives Manufacturer, Passaic County, NJ – Project Scientist planned and conducted the investigation of a BTEX spill to a former industrial supply well at a site also under investigation by the owner and their consultant for chlorinated solvent contamination in groundwater. Mr. Crespi conducted a vapor intrusion investigation of surrounding buildings; oversaw interim-remedial soil removal from the well vault; and installation of a monitoring well network to delineate potential shallow and deep impacts from the soil and from the spill entering through the well casing.

Residential Redevelopment Site, Bayonne, NJ – This former industrial site was redeveloped into residential apartments, and Mr. Crespi prepared the termination and modification of a prior deed notice and the preparation of new engineering control plans and a Soil Remedial Action Permit due to differences in final construction from what was included in the original deed notice. During construction, two previously unknown underground storage tanks (USTs) were found and Mr. Crespi registered the USTs, oversaw removal of the USTs, and prepared the UST Closure Report and RAO.

Distribution Center Landfill Site, Bergen County, NJ – Project Manager directed and conducted routine operation and maintenance for a distribution center constructed upon a capped landfill in Bergen County, NJ. Mr. Crespi conducted quarterly landfill gas monitoring events, annual site inspections, and preparation of annual inspection reports in accordance with the site's closure permit and soil remedial action permit. Mr. Crespi also managed or directly oversaw activities that disturbed the landfill cap and vapor barrier to ensure occupant and worker protection and proper restoration of the vapor barrier, in accordance with site permits. He prepared an assessment and plan for eventual decommissioning of the site's deep landfill gas extraction system, to be implemented as landfill gas conditions allowed.

Landfill Gas Emission Assessment, Japan – Project Scientist assisted in preparation of the workplan for assessment of a capped landfill site in Japan for development of a solar power array. To support a potential project investor, Mr. Crespi prepared and implemented an investigation plan to determine potential landfill gas generation rates and potential for fugitive emissions. Sampling included static and pump tests at landfill gas collection wells, a near-surface study to determine potential fugitive emission levels, dissolved methane sampling in groundwater, and flux chamber pumping tests. The investigation was designed to assess the exposure of potential of the solar power collection components to fugitive or vented landfill gas emissions. Mr. Crespi teamed to prepare the site assessment report advising of potential impacts to the proposed array, as well as recommending modifications to the array design to best accommodate landfill gas conditions.

Landfill Gas Emission Assessment, MA – Project Scientist prepared the workplan for assessment of a closed Superfund municipal landfill site for development of a solar power array in Massachusetts. Mr. Crespi prepared and implemented a plan that investigated landfill gas collection wells, as well as a near-surface study to determine the exposure of potential of the solar power collection components to fugitive or vented landfill gas emissions. Mr. Crespi teamed to prepare the site assessment report advising of potential impacts to the array.

Professional Registrations and Certifications
NYC OER Certified Brownfield Professional, 2013
OSHA 10-Hour Construction Industry Training, 2016
Transportation Worker Identification Credential (TWIC), 2015

OSHA 40-Hour Hazardous Waste Operations and Emergency Response Standard - HAZWOPER, 2004

REBECCA REGAN
Environmental Scientist
Matrix New World Engineering

Professional Qualifications
Rebecca Regan is a project geologist whose background includes the supervision and implementation of various hazardous waste investigations. Rebecca's responsibilities include managing and executing ASTM Phase I and Phase II Environmental Site Assessments (ESAs). Her experience also includes project research at the federal, state, and local levels, report preparation, data collection and analysis, technical review of deliverables, and project administration.

Education
Graduate Studies in Environmental Geophysics, Boston College, 1996-1999
Bachelor of Science, Geology, Boston College, 1996

Professional Experience
NYC Mayor's Office of Environmental Remediation – Ms. Regan was the hazardous materials Project Geologist on this 5-year Brownfield remediation contract. Under this contract, numerous NYC-owned or privately held properties were investigated for environmental contamination of soils, groundwater and soil gas. These investigations included the delineation of soil and/or groundwater impacted by releases of petroleum products, chlorinated solvents, and other contaminants. Ms. Regan was the primary person responsible for the development of Phase I Environmental Site Assessments for the sites awarded to WSP in this program. This included performing environmental database reviews, reviews of historical Sanborn maps, topographic maps and aerial photographs, field reconnaissance of the subject properties and development of the Phase I report and recommendations.

New York City Department of Design and Construction (NYDDC) Phase I Environmental Site Assessments & Corridor Studies, New York, New York – Ms. Regan has conducted and participated in many ASTM Phase I ESAs of various commercial and institutional facilities in New York City for NYCDDC. These facilities included eleven proposed development properties in Manhattan as part of the No. 7 Subway Extension – Hudson Yards Rezoning and Development Program. Ms. Regan also completed numerous corridor assessments in support of limited subsurface investigations for the installation of water and sewer piping. The corridor assessments included site walk-throughs to determine potential environmental impacts and to provide recommendations for remediating those impacts where necessary. Ms. Regan's responsibilities included a review of historical and land use data; review of existing reports; federal, state, and local records review; public records review; a field reconnaissance/site visit; and the preparation of deliverables.

New York City Housing Authority (NYCHA) ASTM Phase I Environmental Site Assessments, Manhattan, the Bronx, and Brooklyn, New York – Ms. Regan conducted numerous Phase I ESAs of numerous public housing developments, parking lots, and vacant lots in order to determine the potential for environmental conditions at the properties which would warrant a Phase II ESA investigation. Rebecca's responsibilities included site walk-throughs; historical use review; interpretation of federal, state, and local record searches; New York State Department of Environmental Conservation (NYSDEC) file reviews, and preparation of deliverables.

New York City Transit (NYCT) ASTM Phase I Environmental Site Assessment, 8th Avenue Emergency Ventilation Plant, New York, New York – Ms. Regan was a member of the environmental assessment team for the environmental impact statement (EIS) report that NYCT has requested for the potential construction of the 8th Avenue Subway Line and 7th Avenue Subway Line emergency ventilation plant. Rebecca prepared the ASTM Phase I ESA that was included as part of the EIS. Her responsibilities included interpretation of federal, state, and local record searches; writing of the report; and preparation of deliverables.

Metropolitan Transit Authority (MTA), New York City Transit ASTM Phase I Environmental Site Assessments, Capital Construction Program, New York, New York – Ms. Regan prepared the ASTM Phase I ESAs for a proposed MTA-NYCT bus depot under consideration by NYCT in Jamaica, Queens. Her responsibilities included interpretation of federal, state, and local record searches, and preparation of deliverables.

New York City Housing Authority (NYCHA) ASTM Phase II Environmental Site Assessments, Manhattan, Brooklyn, and the Bronx (2000-2006) – Ms. Regan provided project oversight for four Phase II ESAs of vacant parcels located adjacent to NYCHA housing developments which were slated for residential development. Her responsibilities included preparing bid documents, scheduling subcontractors, assisting with geophysical surveys and methane gas surveys, supervising subsurface drilling, collecting soil and groundwater samples, interpreting laboratory analytical data, and preparing deliverables.

REBECCA REGAN
Environmental Scientist
Matrix New World Engineering

Nassau County Planning Commission ASTM Phase I Environmental Site Assessments, Mineola, New York – Ms. Regan conducted several Phase I ESAs of Nassau County municipal buildings as part of the Nassau County Real Estate Consolidation Plan. Facilities included the County Police Headquarters, the Old County Courthouse, the Nassau County Courthouse, and several parking areas. Ms. Regan's responsibilities included site walk-throughs; historical use review; interpretation of federal, state, and local record searches; NYSDEC and Nassau County file reviews; and preparation of deliverables.

Metropolitan Transit Authority, New York City Transit New Corona Maintenance Shop and Car Washer, Corona, New York – Ms. Regan was a member of the environmental assessment team for the characterization of subsurface soil and groundwater at the MTA NYCT Corona Yard in Queens. The project involved the construction of a maintenance shop, subway car washer, and new track and signals for the entire back yard. Ms. Regan assisted in the collection of soil and groundwater samples at the yard for disposal characterization purposes. She also assisted in the NYCDEP permitting process.

Metro-North Railroad ASTM Phase I and Phase II Environmental Site Assessments, New York, New York – Ms. Regan conducted Phase I and Phase II ESAs at several properties adjacent to Metro-North Railroad stations located along the Harlem, Hudson, Port Jervis, and Passaic Lines, for the proposed construction of additional commuter parking areas. Her responsibilities included site reconnaissance visits, supervising subsurface investigations, collecting soil samples, interpreting laboratory analytical results, local and county agency document reviews, historical use review, interpretation of federal, state, and local record searches, and the preparation of deliverables.

ASTM Phase I Environmental Site Assessments for the National Railroad Passenger Corporation (Amtrak) First Avenue Ventilation Facility – Ms. Regan has conducted a Phase I ESA for the proposed reconstruction of the new ventilation facility at First Avenue, New York, New York. Ms. Regan's responsibilities included site walk-throughs, visual asbestos surveys of the property, historical use review, interpretation of federal, state, and local record searches, and the preparation of deliverables.

Parsons Brinckerhoff, New York, NY – Project Geologist responsible for managing and executing ASTM Phase I and Phase II Environmental Site Assessments at commercial, residential, and industrial sites. Ms. Regan's would conduct project research at the federal, state, and local levels, supervise subsurface investigations and collection of soil and groundwater samples, and interpretation and analysis of laboratory data. Ms. Regan's project management experience includes preparing proposals and budgets, coordinating with regulatory agencies and clients, supervising staff, managing subcontractors, and ensuring technical quality of work products.

Rizzo Associates, Framingham, MA – Environmental Scientist responsible for completing ASTM Phase I and Phase II Environmental Site Assessments, preparing various Massachusetts Contingency Plan reports, supervise subsurface investigations and collection of soil and groundwater samples, performing site visits, background research and analysis, and assisting in the preparation of proposals and permit applications.

Roy F. Weston Superfund Technical Assessment and Response Team – Environmental Scientist responsible for providing support to the USEPA Region I Response and Site Assessment Programs Complete site investigations and environmental assessments, and perform soil and groundwater sampling at numerous hazardous waste sites in USEPA Region I.

Professional Certifications
Occupational Safety and Health Administration (OSHA) 40-hour HAZWOPER Training, 1998
Annual 8-hour HAZWOPER refresher course
New York State Licensed Asbestos Inspector, 2003 (expired)
U.S. Environmental Protection Agency (EPA) Lead-Based Paint Risk Assessor, 2002 (expired)
Metropolitan Transit Authority (MTA) New York City Transit (NYCT) Track Safety Training, 2003 Amtrak® On-Track Safety for Contractors Training, 2003

EVAN WARD, E.I.T.
Junior Environmental Engineer
Matrix New World Engineering

Professional Qualifications
Evan Ward has more than two years of experience focusing on environmental assessment and remediation projects under NJDEP and NYSDEC jurisdiction for residential/commercial/industrial facilities. Mr. Ward's experience includes oversight of monitoring and temporary well installations, underground storage tank (UST) removal, soil removal, soil boring and soil classification, groundwater sampling, soil sampling, indoor and sub-slab air sampling, Phase I/II environmental site investigations and remediation system design. Mr. Ward has experience in the preparation of NYSDEC, NYCOER and NJDEP reports, environmental technical reports and permitting applications relative to Phase I and Phase II site remediation assessments and investigations throughout New Jersey and New York. Mr. Ward has his Engineering in Training (E.I.T.) certification and OSHA 40-Hour HAZWOPER training. Evan started his employment with Matrix on April 9, 2018 and works in Matrix's New York City office.

Education
B.S. Environmental Engineering; Lehigh University, 2016

Professional Experience
LaGuardia Airport Central Terminal Building Replacement Project Phase II and III – Soil Characterization – Environmental Engineer responsible for conducting soil waste characterization program to identify any potential contaminants in soil to be disturbed as part of reconstruction of the CTB during the installation of building foundations, utility relocation and temporary roadways. Work involved oversight, sampling, and coordination of 100 soil borings to support the classification of 116,000 cubic yards of soil. and coordination with various airport safety personnel. Evan coordinated on-site work such as mobilizing the drillers, accessing airside, and coordinating the Port Authority/airside escorts. Mr. Ward analyzed laboratory analytical data writing summary reports for each data package to determine where additional delineation borings were needed. Additionally, Evan prepared the summary report detailing the work completed.

New York City Office of Management and Budget and New York City Department of Corrections – Master Plan for a Borough Based NYC Jail System – Environmental Engineer responsible for organizing and conducting investigations of potential and existing jail sites in New York City. Evan oversaw field investigations at numerous sites, which included advancement of soil borings, collection of soil vapor points, installation of temporary wells and collection of groundwater samples. Evan wrote the Subsurface Investigation Reports detailing the work completed and the results of the sampling.

New York Department of Parks and Recreation Reconstruction of Homecrest Playground – Soil/Materials Management Plan and Construction Health and Safety Plan – For this project for the design of improvements to the Homecrest Playground in Brooklyn, NY, Evan was the Environmental Engineer responsible for preparing the Soil/Materials Management Plan (SMMP) and Construction Health and Safety Plan (CHASP). The SMMP details the procedures and measures that will be taken to manage the on-site soils and materials during construction and the CHASP outlines the safety protocols and procedures that are to take place on-site while the construction is taking place.

Industrial Facility, Brooklyn, NY – Due Diligence Support – On behalf of an industrial client that both owns and leases numerous non-contiguous lots on the same block in Brooklyn, NY, Evan was the environmental engineer responsible for the on-site inspection and preparation of two Phase I ESAs, one for the owned and one for the leased properties. Mr. Ward also reviewed remedial documents of an adjacent gas station in the NYSDEC Spills program to ascertain potential impacts to the client's leased and owned properties.

1249 Coney Island Avenue, Brooklyn, NY – UST Removal, Hydraulic Lift Removal and Contaminated Soil Disposal – Environmental Engineer responsible for overseeing the removal of five (5) 4,000-gallon gasoline USTs and associated piping, two fuel oil tanks, one waste oil tank, three (3) hydraulic lifts, and the removal of contaminated soil. Additionally, Evan conducted field screening activities, collected soil samples of gasoline contaminated soil and composite soil samples and conducted the Community Air Monitoring Program (CAMP). The activities were performed in general accordance with the NYSDEC and NYCOER guidance and protocol. The subject property was a gasoline station and is being developed into a storage facility. Mr. Ward completed the tank closure report and PBS forms to be submitted to the NYSDEC/NYCOER.

MATRIXNEWORLD
Engineering Progress

EVAN WARD, E.I.T.
Junior Environmental Engineer
Matrix New World Engineering

875 Fourth Avenue, Brooklyn, NY– UST Removal, Gasoline Station Decommissioning, Soil Disposal – Environmental Engineer responsible for overseeing the removal of three (3) 4,000-gallon gasoline USTs and associated piping, and the removal of clean soil. Additionally, conducted field screening activities, collected soil samples and composite soil samples and conducted the CAMP. The activities were performed in general accordance with the NYSDEC and NYCOER guidance and protocol. The subject property was a gasoline station and was in the process of being sold and developed. Mr. Ward completed the tank closure report and PBS forms to be submitted to the NYSDEC/NYCOER.

1900 McDonald Avenue, Brooklyn, NY – Phase I and Phase II Investigation – Environmental Engineer responsible for conducting the Phase I Environmental Site Assessment (ESA) site inspection and report and the Phase II investigation and report. The site is currently a used car lot/mechanic that was formally a gas station. Evan oversaw the advancement of eight (8) soil borings and five (5) temporary wells and collected soil samples, groundwater samples, one sub-slab air sample and four indoor/outdoor air samples.

Vallo Bus Depot, Whitestone, NY – Storm Water Pollution Prevention Plan – Environmental Engineer who assisted with the creation of the Storm Water Pollution Prevention Plan (SWPPP) for a bus depot. Mr. Ward completed the necessary permitting and reporting (Discharge Monitoring Reports, Annual Certification Report) to be submitted to the NYSDEC and conducted site inspections making sure the site was in compliance with the SWPPP.

31st Avenue, Jackson Heights, NY – Remedial Investigation & Remedial Action – Environmental Engineer who assisted with designing the remedial plan for the removal of product in groundwater. The site is a multi-family residential apartment building that was formerly a gasoline station. Evan conducted groundwater sampling and the installation of oil skimmers in on-site recovery wells. Mr. Ward conducted O&M of the skimmers and weekly product recovery. Additionally, Evan calculated product re-charge rate in order to find the best solution of removing the product from the groundwater.

10-12 Sussex Avenue, East Orange, NJ – Phase I and Groundwater Investigation – Environmental Engineer responsible for conducting the Phase I ESA site inspection and preparing the report. Mr. Ward also conducted a groundwater investigation in which permanent wells were installed and samples analyzed for gasoline related contaminants. The investigation at this gas station was conducted due to a gasoline UST that failed a tank tightness test.

300 Lafayette Street, New York, New York – Remedial Action Report – Environmental Engineer responsible for completing the Remedial Action Report (RAR) to be submitted to the NYCOER. The site was a former gasoline station in which three (3) known gasoline USTs and five (5) unknown gasoline/fuel oil USTs were removed. The site was excavated to a depth of 15 feet and approximately 20,000 tons of soil were removed and properly disposed. End point samples were taken, and the site achieved Track 1 cleanup, the NYCOER highest standard for soil cleanup.

Professional Registrations and Certifications:

APPENDIX I

Environmental Professional Statement

MATRIXNEWORLD
Engineering Progress

DEFINITION OF ENVIRONMENTAL PROFESSIONAL AND RELEVANT EXPERIENCE THERETO PURSUANT TO 40 CFR 312

(1) a person who possesses sufficient specific education, training, and experience necessary to exercise professional judgment to develop opinions and conclusions regarding conditions indicative of releases or threatened releases (see §312.1(c)) on, at, in, or to a property, sufficient to meet the objectives and performance factors in §312.20(e) and (f).

(2) Such a person must: (i) hold a current Professional Engineer's or Professional Geologist's license or registration from a state, tribe, or U.S. territory (or the Commonwealth of Puerto Rico) and have the equivalent of three (3) years of full-time relevant experience; or (ii) be licensed or certified by the federal government, a state, tribe, or U.S. territory (or the Commonwealth of Puerto Rico) to perform environmental inquiries as defined in §312.21 and have the equivalent of three (3) years of full-time relevant experience; or (iii) have a Baccalaureate or higher degree from an accredited institution of higher education in a discipline of engineering or science and the equivalent of five (5) years of full-time relevant experience; or (iv) have the equivalent of ten (10) years of full-time relevant experience.

(3) An environmental professional should remain current in his or her field through participation in continuing education or other activities.

(4) The definition of environmental professional provided above does not preempt state professional licensing or registration requirements such as those for a professional geologist, engineer, or site remediation professional. Before commencing work, a person should determine the applicability of state professional licensing or registration laws to the activities to be undertaken as part of the inquiry identified in §312.21(b).

(5) A person who does not qualify as an environmental professional under the foregoing definition may assist in the conduct of all appropriate inquiries in accordance with this part if such person is under the supervision or responsible charge of a person meeting the definition of an environmental professional provided above when conducting such activities.

Relevant experience, as used in the definition of environmental professional in this section, means: participation in the performance of all appropriate inquiries investigations, environmental site assessments, or other site investigations that may include environmental analyses, investigations, and remediation which involve the understanding of surface and subsurface environmental conditions and the processes used to evaluate these conditions and for which professional judgment was used to develop opinions regarding conditions indicative of releases or threatened releases (see §312.1(c)) to the Site. Matrix personnel resume(s) are included in **Appendix H**.

I declare that, to the best of my professional knowledge and belief, I meet the definition of environmental professional as defined in §312.10 of 40 CFR 312.

I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. I have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Signature of Environmental Professional:  Date: 2/28/2022
